

# **ADDENDUM to ARBORICULTURAL IMPACT ASSESSMENT REPORT dated 01/04/2023**

## **1. Tree 9 (Bangalay)**

Tree 9 has been removed with Council's permission (TA2025/0226) as due to natural senescence, it was posing a risk of collapse onto the high-voltage electrical main.

## **1. Tree 12 (Ficus rubiginosa)**

Tree 12 is situated atop an elevated rock formation at approximate RL38.8, as per A Clerke's survey dated 20/05/2022. Since the rock is to be retained, the tree will not be impacted. Furthermore, the fill surrounding the driveway structure will not affect the tree, as the driveway's level at that point is approximately 1.3 meters below the top of the rock (RL37.4-37.6), effectively isolating the root zone from the underlying ground.
