Hello Rolf

Thank you for sharing the new project and keeping Lift Shop in mind.

As discussed, I am confirming the following precautions will be taken with the lift given the flood zone requirements,

1. Lift will always return to the first level after use to avoid the lift resting in the floor zone area
2. Lift machinery can be raised off the floor to ensure it is above the flood zone or be located on the first level
3. Electrical switches will be mounted above the flood zone RL
4. If necessary, the builder could also put a weatherproof enclosure around the machinery if required
5. The lift type will be sliding doors to ensure all door locks, buttons and wiring are located above the floor zone RL

Regards

Nathan Heaney
