The external area is defined by the communal garden and BBQ area. The walkability to this area is the key with ramped walkways to ensure access by all.

Surface finishes will be hard-wearing and durable and suitable for purpose. Variations in finishes will define spaces for particular uses as well as announce arrival and transition zones.

### LANDSCAPE PLAN - ROOFTOP 1.4 EXTERNAL ROOFTOP TERRACE AREA

The rooftop garden is a place to explore a living landscape. It is a place to escape and emotionally regenerate. The space improves a sense of well-being by encouraging social interaction. Being outdoors in a garden setting is restorative and will encourage active gardening.

The rooftop will feature community gardens that are innovative, water-efficient, self-watering garden beds designed and manufactured in Australia.

The urban farm will produce fresh vegetables and herbs for the residents as well as for use in the cafe kitchen. The rooftop will also incorporate productive fruit trees and working bee hives.

DETAIL A TYPICAL RAISED PLANTER BOX

For the successful establishment of planter boxes it is essential that adequate maintenance on a regular basis be provided. After the vegetation has been installed, the requirements for maintenance include; removal of weeds, light fertilization with slow release complete fertilizers, inspected for damage and the replacement of dead plants.

Adequate watering during plant establishment is required for the first few weeks. The rootball and surrounding soil should be adequately moist. As the plants establish the intervals should increase and then the plant should only be watered at the first signs of wilting.

Fertilising will only be required if the plant is indicating signs of poor condition and slow growth due to nutrient deficiencies. If fertilising is deemed to be necessary it will be carried out after the second seasons growth at the end of the second growing season in late summer to autumn. N:P:K ratios and application rates vary greatly depending on conditions of use. Consult manufacturers for application rates suitable for individual plantings. Fertilisers may be applied to the soil in an organic granular application with a low phosphorus and nitrogen content, applied in a broad casting fashion to quantities &

Following planting tamp lightly to give an even graded surface. Spread 75mm layer of mulch as specified over the surface of all garden beds. Care shall be taken not to mix soil and mulch together. All mulching is to be carried out with AS 4454 composted organic material, low in phosphorous and derived from the raw material, green waste. Mulching materials must be sourced from a certified fully licensed Australian Standard producer. Every 6 months Planter are to be checked to ensure there is sufficient mulch. If additional mulch is required it will be to a maximum depth of 75mm.

Pruning will be an ongoing process, which will require the periodical removal of unsightly dead wood and pruning of plants that may cascade over the edge.

Grasses should be trimmed after 3 years preferably in winter. Trim in a ball shape, usually about half the height.

Weed control measures should aim to eliminate any weed germination and establishment. Weeds are to be controlled while young and before seed set.

Treatment of pests and diseases is important for maintaining healthy plants. Non-chemical controls and treatments should always be considered first.

Should any plants require replacing the same species and pot size shall be used. The following guidelines are recommended:

• A hole is to be excavated at 2-3 times the diameter of the container and at the same depth as the root ball with the sides loosened.

• No organic matter, gravel or coarse material to be placed at the bottom of the planting hole.

• All plants are to be planted so the top of the root ball is level with the existing ground level.
