RE: DA2025/0279 - 237 McCarrs Creek Road CHURCH POINT NSW 2105

Dear Assessing officer,

this DA calls for the complete removal of flora on the block. Total removal of undergrowth, mid growth, and canopy. The block has several trees suitable for Koala habitat. The fact that no scat was found on the walk through doesn't mean they are not around. More likely they have moved due to the current development disturbances which have been approved. They will come back if we stop this march of concrete into this previously pristine area. Over the weekend there was an event held in London, raising money to help protect koala habitat and Koalas. It's a really bad look to approve cutting down habitat so a house can take up the entire block. This block is not suitable for such a large house. There is no sensitivity to the flora and fauna and no sensitivity to the area. Approving this will be a blight and one we can't come back from. Please help us protect the area.
