1 INTRODUCTION

1.1 General

This Engineering Report has been prepared to supplement the Development Application (DA) to Northern Beaches Council (Council) for the proposed redevelopment of the Forestway Shopping Centre. The report has been prepared on behalf of Develop Building & Developments Pty Ltd.

The site is currently in operation and consists of a supermarket and various specialty tenancies along the western side of the site and a multi storey carpark along the eastern side of the site.

This report will outline the Civil Engineering proposal and in particular the stormwater management strategy developed for managing stormwater runoff from the proposed development and that the proposed concepts meet Council's specifications and requirements.

1.2 Site Description

The address of the Forestway Shopping Centre is 22 Forest Way Frenchs Forest (DP1209801), see Figure 1 below. It is located within the Northern Beaches Local Government Area (LGA) and covers an area of approximately 2.041ha. The site is enclosed by Forest Way to the east, Russell Avenue to the North, Grace Ave to the west and Frenchs Forest Public School to the south. Customer parking to the multistorey carpark is via Forest Way and Russel Avenue and the on-grade carpark is accessed via Grace Ave.

A review of the survey conducted by Realserve shows the site generally falls towards the north eastern corner of the site.

1.3 Proposed Development

The proposed development involves upgrading the multi storey carpark to include an additional basement level and an extension to the shopping center. The basement level will extend towards the north and extend under the extended section of the shopping centre. Refer to enclosed civil drawings and the architectural plans for details.

2 STORMWATER MANAGEMENT PLAN

2.1 General Stormwater

Drainage connection points from the existing building roof will be largely maintained with the exception of some minor drainage lines that will need diversion and reconnection.

The drainage system for the extension and multi-levelled carpark upgrade will be designed to collect all concentrated flows from impermeable surfaces such as roof areas and parking areas.

Another aspect of the stormwater system is to ensure that the design takes into account water sensitive urban design (WSUD) measures. The stormwater network has been designed such that it incorporates proprietary pit baskets and secondary treatment devices as a means of treating stormwater before it leaves the site to ensure there is no adverse impact on the downstream drainage system.

Water quality and quantity will be calculated only for the proposed areas (refer to Appendix A for catchment calculations).

2.2 Stormwater Quantity

The Northern Beaches Council's Water Management for Development Policy notes:

'For all developments except single residential dwelling developments the PSD is to be calculated on the maximum allowable impervious fraction of 0%. That is, discharge off the site is to be restricted to the "state of nature" condition.'

As such, On-site Stormwater Detention (OSD) tanks were designed to ensure the proposed development site discharge was reduced to the undeveloped flow rates. Due to spatial configurations/restrictions within the site, a combined total of three OSDs are proposed. Two of which are located in the multi-levelled carpark which will drain into Forest Way and the third OSD located within the Mini Major which will drain into Grace Ave.

The stormwater systems were modelled using the DRAINS software using the ARR 2019 storms and procedures for an Initial Loss/Continual Loss model. The site discharge rates for the 5, 20 and 100yr ARI storm events into Forest Way and Grace Ave are shown in Table 1 and 2 respectively.

The two OSDs located in the carpark have a combined area of 100m² and a volume of 235m³. Refer to Appendix A for more details of these OSD tanks.

henry&hymas

Table 1: Site discharge rates to Forest Way

ARI (yr)	Pre (L/s)	Post(L/s)
5	174	173
20	295	251
100	434	419

The OSD located within the Mini Major has an area of 39.8m² and a minimum volume of 71.6m³.

Table 2: Site discharge rates to Grace Ave

ARI (yr)	Pre (L/s)	Post(L/s)
5	53	53
20	85	66
100	123	80

2.3 Stormwater Quality

Urban developments have the potential to increase gross pollutants, sediments, hydrocarbons and nutrient concentrations in stormwater runoff. To limit the impact on the downstream water quality, water quality measures at the source and end of line-treatments will be provided. This section describes the specific implementation of these measures for the proposed development.

As per Northern Beaches Council's Water Management Policy, water quality treatment will be required. The required pollutant reduction target rates are shown in Table 3.

Pollutant	Pollutant Reduction rates
Total Phosphorus (TP)	65%
Total Nitrogen (TN)	45%
Total Suspended Solid (TSS)	85%

Table 3: Stormwater quality requirements

It is proposed to provide pit baskets such as Ocean Protect Ocean Guards or an approved equivalent for all inlet pipes draining into the OSD. These pit baskets will assist in the water quality treatment for the site by capturing a large portion of gross pollutants, large sediment particles and organic matter that may also contain nutrients.

Secondary treatment devices such as Ocean Protect storm filter PSORB cartridges will also be provided within the OSD tanks to assist in the removal of phosphorus and nitrogen. Refer to Appendix B for MUSIC modelling.

The software MUSIC has been used to model the site. The stormwater treatment results are presented in Table 4 below. A total of 7 Ocean Protect Ocean Guards and 24 x 690mm PSORBS stormfilter cartridges are required to achieve the required pollutant target removal rates.

henry&hymas

Table 4: Achieved pollutant removal rates

Pollutant	Achieved Pollutant Reduction rates
Total Phosphorus (TP)	72.7%
Total Nitrogen (TN)	52.7%
Total Suspended Solid (TSS)	85.0%

3 CONCLUSION

The design of the carparks, circulation ramps and access driveway provide a safe and efficient shopping centre which is sympathetic to the needs of the users and greatly improves on the existing safety of the car park.

Appropriate stormwater management practices will be implemented that minimise the impact of development on the existing stormwater system in terms of water quality whilst ensuring safe and efficient conveyance of runoff and conveyance through the site safely.

Whilst it is inevitable that the development will have an impact on the existing landform and stormwater runoff characteristics due to earthworks, change of land form and changes in impervious areas; by providing a safe and efficient design, and implementing appropriate measures during construction and operation of the development, it can be ensured that there will be minimal impact on the existing environment as a result of the proposed development.

SEDIMENT AND EROSION CONTROL PLAN

SCALE: 1:400

SEDIMENT & EROSION CONTROL NOTES

- ALL SEDIMENT CONTROL DEVICES ARE TO BE CONSTRUCTED, PLACED AND MAINTAINED IN ACCORDANCE WITH NORTHERN BEACHES COUNCIL'S SPECIFICATIONS AND LANDCOM'S "SOIL AND CONSTRUCTION" MANUAL.
- ALL PERIMETER & SILTATION CONTROL MEASURES ARE TO BE PLACED PRIOR TO, OR AS THE FIRST STEP IN EARTH WORKS AND/OR CLEARING.
- THE SEDIMENT & EROSION CONTROL PLAN MAY REQUIRE FUTURE ADJUSTMENT TO REFLECT CONSTRUCTION STAGING. IT IS ALSO THE CONTRACTORS RESPONSIBILITY TO PREPARE THEIR OWN SEDIMENT AND EROSION CONTROL PLAN WHICH SUITS THE DESIGNED CONSTRUCTION STAGING.
- FILTRATION BUFFER ZONES ARE TO BE FENCED OFF AND ACCESS PROHIBITED TO ALL PLANT AND MACHINERY.
- ALL TEMPORARY EARTH BERMS, DIVERSIONS & SILT DAM EMBANKMENTS ARE TO BE MACHINE COMPACTED, SEEDED & MULCHED FOR TEMPORARY VEGETATION COVER AS SOON AS THEY HAVE BEEN FORMED.
- ALL SEDIMENT TRAPPING STRUCTURES AND DEVICES ARE TO BE INSPECTED AFTER STORMS FOR STRUCTURAL DAMAGE OR CLOGGING. TRAPPED MATERIAL IS TO BE REMOVED TO A SAFE LOCATION.
- ALL TOPSOIL IS TO BE STOCKPILED ON SITE FOR REUSE (AWAY FROM TREES AND DRAINAGE LINES). MEASURES SHALL BE APPLIED TO PREVENT EROSION OF THE STOCKPILES.
- ALL EARTHWORK AREAS SHALL BE ROLLED EACH EVENING TO SEAL THE EARTHWORKS.
- ALL FILLS ARE TO BE LEFT WITH A LIP AT THE TOP OF THE SLOPE AT THE END. ALL CUT AND FILL SLOPES ARE TO BE SEDED AND STRAW MULCHED WITHIN 14 DAYS OF COMPLETION OF FORMATION U.N.O. BY LANDSCAPE ARCHITECTS.
- UPON COMPLETION OF ALL EARTHWORKS OR AS DIRECTED BY COUNCIL SOIL CONSERVATION TREATMENTS SHALL BE APPLIED SO AS TO RENDER AREAS THAT HAVE BEEN DISTURBED, EROSION PROOF WITHIN 14 DAYS.
- EROSION AND SILT PROTECTION MEASURES ARE TO BE MAINTAINED AT ALL TIMES.
- THESE DRAWINGS SHOW THE INITIAL STAGES OF THE SITE CONSTRUCTION AND EROSION CONTROLS. AS CONSTRUCTION CONTINUES IT IS THE CONTRACTOR'S RESPONSIBILITY TO ENSURE THAT ALL PITS ARE PROGRESSIVELY FITTED WITH MESH AND GRAVEL INLET FILTERS AS REQUIRED
- ALL EXISTING COUNCIL PITS WITHIN 50m OF THE SITE BOUNDARIES ARE TO BE FITTED WITH MESH AND GRAVEL INLET FILTERS

SEDIMENT FENCE CONSTRUCTION NOTES:

1. CONSTRUCT SEDIMENT FENCES AS CLOSE AS POSSIBLE TO BEING PARALLEL TO THE CONTOURS OF THE SITE, BUT WITH SMALL RETURNS AS SHOWN IN THE DRAWING TO LIMIT THE CATCHMENT AREA OF ANY ONE SECTION. THE CATCHMENT AREA SHOULD BE SMALL ENOUGH TO LIMIT WATER FLOW IF CONCENTRATED AT ONE POINT TO 50 LITRES PER SECOND IN THE DESIGN STORM EVENT, USUALLY THE 10-YEAR EVENT.
2. CUT A 150mm DEEP TRENCH ALONG THE UPSLOPE LINE OF THE FENCE FOR THE BOTTOM OF THE FABRIC TO BE ENTRENCHED.
3. DRIVE 1.5m LONG STAR PICKETS INTO GROUND @ 2.5m INTERVALS (MAX) AT THE DOWNSLOPE EDGE OF THE TRENCH. ENSURE ANY STAR PICKETS ARE FITTED WITH SAFETY CAPS.
4. FIX SELF-SUPPORTING GEOTEXTILE TO THE UPSLOPE SIDE OF THE POSTS ENSURING IT GOES TO THE BASE OF THE TRENCH. FIX THE GEOTEXTILE WITH WIRE TIES OR AS RECOMMENDED BY THE MANUFACTURER. ONLY USE GEOTEXTILE SPECIFICALLY PRODUCED FOR SEDIMENT FENCING. THE USE OF SHADE CLOTH FOR THIS PURPOSE IS NOT SATISFACTORY.
5. JOIN SECTIONS OF FABRIC AT A SUPPORT POST WITH A 150mm OVERLAP. 6. BACKFILL THE TRENCH OVER THE BASE OF THE FABRIC AND COMPACT IT THOROUGHLY OVER THE GEOTEXTILE.

STABILISED SITE ACCESS WITH SHAKER RAMP

N.T.S.

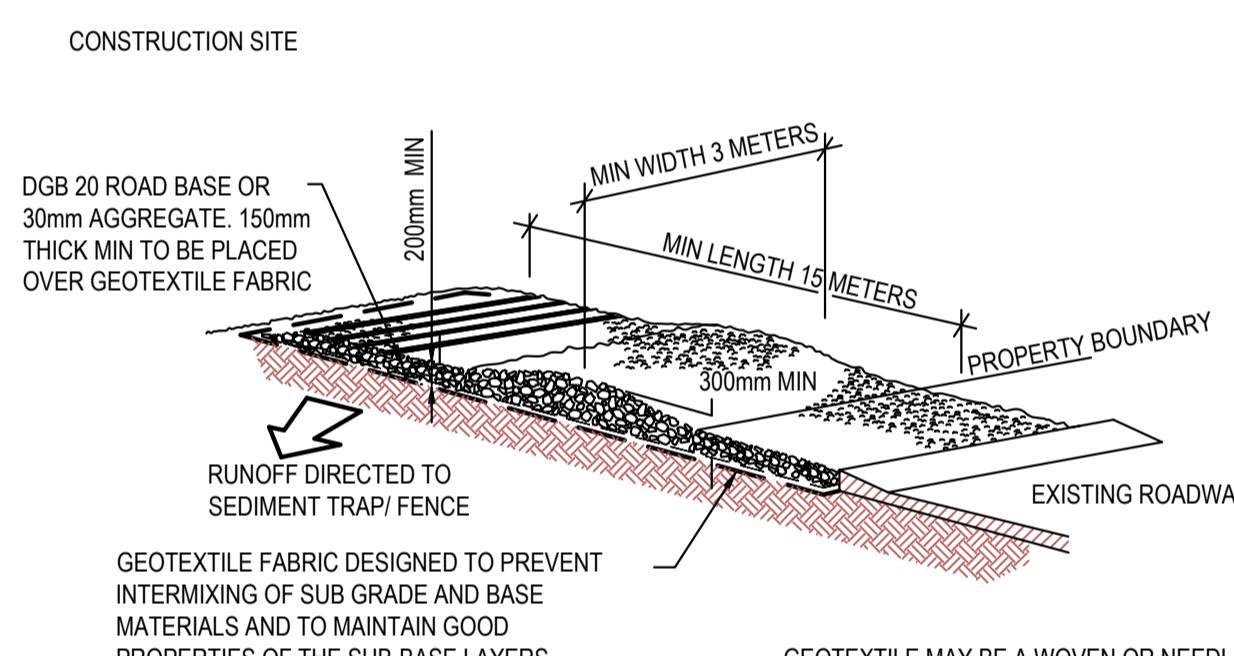

MESH & GRAVEL INLET FILTER CONSTRUCTION NOTES:

1. FABRICATE A SLEEVE MADE FROM GEOTEXTILE OR WIRE MESH LONGER THAN THE LENGTH OF THE INLET PIT AND FILL IT WITH 25mm TO 50mm GRAVEL.
2. FORM AN ELLIPTICAL CROSS-SECTION ABOUT 150mm HIGH x 400mm WIDE.
3. PLACE THE FILTER AT THE OPENING LEAVING AT LEAST A 100mm SPACE BETWEEN IT AND THE KERB INLET. MAINTAIN THE OPENING WITH SPACER BLOCKS.
4. FORM A SEAL WITH THE KERB TO PREVENT SEDIMENT BYPASSING THE FILTER.
5. SANDBAGS FILLED WITH GRAVEL CAN SUBSTITUTE FOR THE MESH OR GEOTEXTILE PROVIDED THEY ARE PLACED SO THAT THEY CAN FIRMLY ABUT EACH OTHER AND SEDIMENT / LANDED WATERS CANNOT PASS BETWEEN.

MESH & GRAVEL INLET FILTER

SCALE N.T.S.

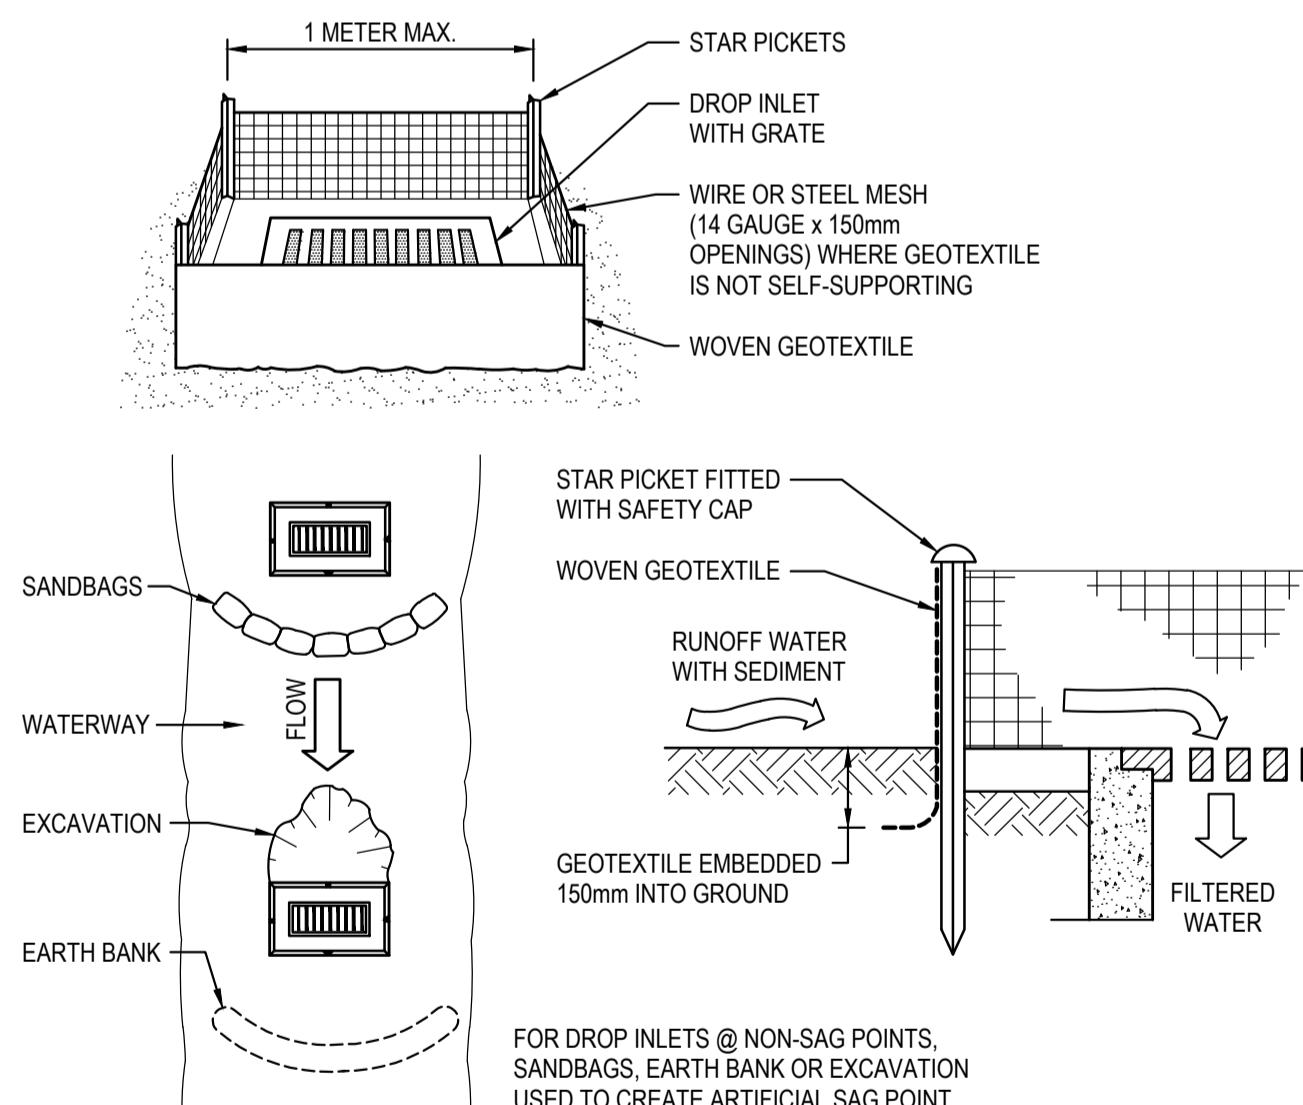

STABILISED SITE ACCESS WITH SHAKER RAMP

N.T.S.

NOTES:

1. THIS DEVICE IS TO BE LOCATED AT ALL EXITS FROM CONSTRUCTION SITE.
2. THIS DEVICE IS TO BE REGULARLY CLEANED OF DEPOSITED MATERIAL SO AS TO MAINTAIN A 50mm DEEP SPACE BETWEEN PLANKS.
3. ANY UNSEALED ROAD BETWEEN THIS DEVICE AND NEAREST ROADWAY IS TO BE TOPPED WITH 100mm THICK 40-70mm SIZE AGGREGATE.
4. ALTERNATIVELY, THREE(3) PRECAST CONCRETE CATTLE GRIDS (AS MANUFACTURED BY 'HUMES CONCRETE' MAY BE USED. 1, 2 & 3 ABOVE ALSO APPLY.

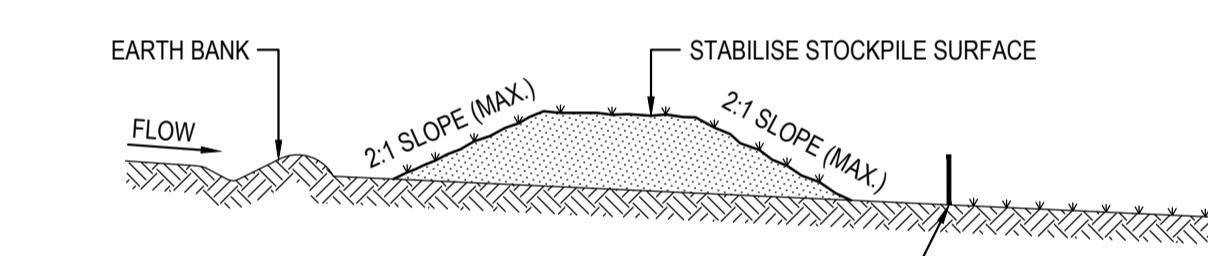

GEOTEXTILE INLET FILTER CONSTRUCTION NOTES:

1. FABRICATE A SEDIMENT BARRIER MADE FROM GEOTEXTILE.
2. PICKET SPACING TO BE MAXIMUM 1.0m.
3. IN WATERWAYS, ARTIFICIAL SAG POINTS CAN BE CREATED WITH SANDBAGS OR EARTH BANKS AS SHOWN IN THE DRAWING.
4. DO NOT COVER THE INLET WITH GEOTEXTILES UNLESS THE DESIGN IS ADEQUATE TO ALLOW FOR ALL WATERS TO BYPASS IT.

GEOTEXTILE INLET FILTER

SCALE N.T.S.

STOCKPILE CONSTRUCTION NOTES:

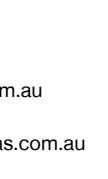

1. PLACE STOCKPILES MORE THAN 2 (PREFERABLY 5) METRES FROM EXISTING VEGETATION, CONCENTRATED WATER FLOW, ROADS AND HAZARD AREAS.
2. CONSTRUCT ON THE CONTOUR AS LOW, FLAT, ELONGATED MOUNDS.
3. WHERE THERE IS SUFFICIENT AREA, TOPSOIL STOCKPILES SHALL BE LESS THAN 2 METRES IN HEIGHT.
4. WHERE THEY ARE TO BE PLACED FOR MORE THAN 10 DAYS, STABILISE FOLLOWING THE APPROVED E.S.C.P. OR S.W.M.P. TO REDUCE THE C-FACTOR TO LESS THAN 0.10.
5. CONSTRUCT EARTH BANKS ON THE UPSLOPE SIDE TO DIVERT WATER AROUND STOCKPILES AND SEDIMENT FENCES 1 TO 2 METRES DOWNSLOPE.
