Introduction

This written request under Clause 4.3 of the Manly Local Environmental Plan 2013 (**MLEP 2013**) accompanies a Development Application seeking consent for alterations and additions to an existing dual occupancy (attached), at 10 West Street, Balgowlah.

The written request is made pursuant to Clause 4.6 MLEP 2013 and requests a variation to height of buildings as detailed under Clause 4.3 of Manly Local Environmental Plan 2013. Clause 4.3 of MLEP 2013 notes:

(2) The height of a building on any land is not to exceed the maximum height shown for the land on the Height of Buildings Map.

The site has a maximum building height provision of 8.5m. The proposal will result in a maximum height of 8.62m. It is noted that the breach is the result of the sloping nature of the site and the existing man-made changes.

The proposed alterations and additions are reasonable and within the context of the site and surrounding development and will not result in excessive bulk and scale. It is submitted that there is more than enough justification and precedence within the area to support the breach.

In this regard, it is requested Council support a variation with respect to compliance with the maximum height of buildings as described in Clause 4.3 of the MLEP 2013. The nature and extent of the contravention is as follows:

Requirement	8.5m
Proposed	8.62 m
Is the planning control in question a development standard?	Yes
Is the non-compliance with to the clause requirement a numerical/or performance based variation?	Numerical
If numerical enter a % variation to requirement	1.4%

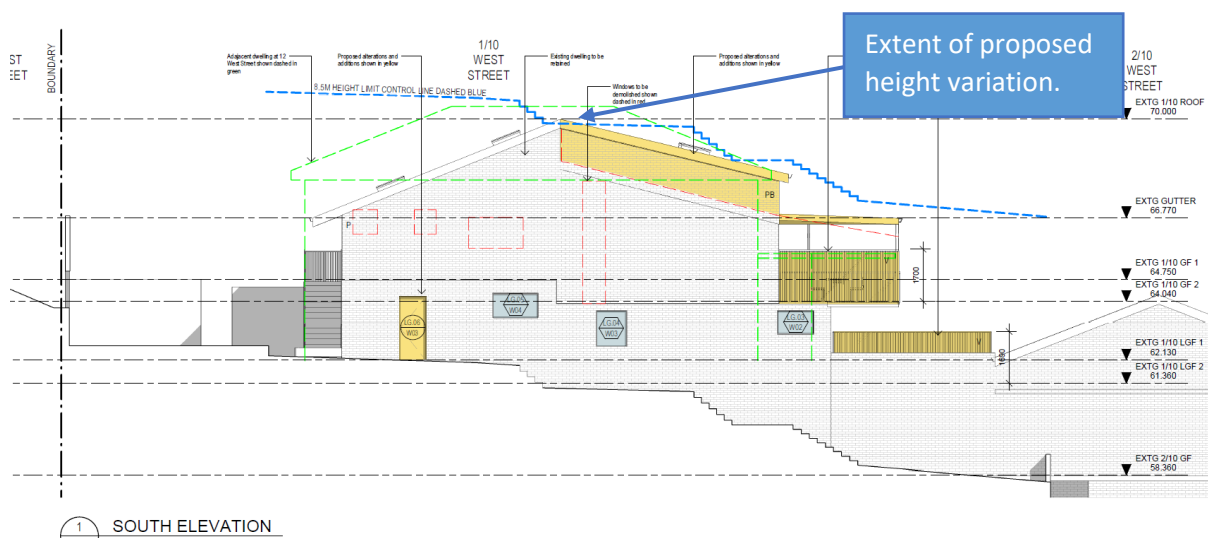

Figure 1: Extract from architectural plans shows the extent of the proposed variation.

Manly Local Environmental Plan 2013 (MLEP 2013)

2.1 Clause 2.2 and the Land Use Table

Clause 2.2 and the Land Zoning Map provide that the subject site is zoned R2 – Low Density Residential (the R2 zone) and the Land Use Table in Part 2 of MLEP 2013 specifies the following objectives for the R2 zone:

- ***To provide for the housing needs of the community within a low density residential environment***

Comment: The proposed additions and alterations to the existing dwelling will improve the quality and functionality of the existing dwelling on the site and ensure high quality dwelling which contributes to the ongoing provision of housing in the Balgowlah area.

- ***To enable other land uses that provide facilities or services to meet the day to day needs of residents.***

Comment: The proposed additions to the dwelling will enhance the existing residential accommodation within the site and does not propose any other alternate land use.

2.3 Clause 4.6 – Exceptions to Development Standards

Clause 4.6(1) MLEP 2013 provides:

(1) *The objectives of this clause are as follows:*

- (a) *to provide an appropriate degree of flexibility in applying certain development standards to particular development,*
- (b) *to achieve better outcomes for and from development by allowing flexibility in particular circumstances.*

The latest authority in relation to the operation of clause 4.6 is the decision of Chief Justice Preston in *Initial Action Pty Ltd v Woollahra Municipal Council* [2018] NSWLEC 118 (“*Initial Action*”). *Initial Action* involved an appeal pursuant to s56A of the Land & Environment Court Act 1979 against the decision of a Commissioner.

At [90] of *Initial Action* the Court held that:

“In any event, cl 4.6 does not give substantive effect to the objectives of the clause in cl 4.6(1)(a) or (b). There is no provision that requires compliance with the objectives of the clause. In particular, neither cl 4.6(3) nor (4) expressly or impliedly requires that development that contravenes a development standard “achieve better outcomes for and from development”. If objective (b) was the source of the Commissioner’s test that non-compliant development should achieve a better environmental planning outcome for the site relative to a compliant development, the Commissioner was mistaken. Clause 4.6 does not impose that test.”

The legal consequence of the decision in *Initial Action* is that clause 4.6(1) is not an operational provision and that the remaining clauses of clause 4.6 constitute the operational provisions.

Clause 4.6(2) of MLEP 2013 provides:

(2) Development consent may, subject to this clause, be granted for development even though the development would contravene a development standard imposed by this or any other environmental planning instrument. However, this clause does not apply to a development standard that is expressly excluded from the operation of this clause.

Clause 4.3 is not excluded from the operation of clause 4.6 by clause 4.6(8) or any other clause of the MLEP 2013.

Clause 4.6(3) Of MLEP provides:

(3) Development consent must not be granted to development that contravenes a development standard unless the consent authority is satisfied the applicant has demonstrated that—
(a) compliance with the development standard is unreasonable or unnecessary in the circumstances, and
(b) there are sufficient environmental planning grounds to justify the contravention of the development standard.

The proposed development does not comply with the prescribed height of buildings for residential accommodation in an Zone R2, as prescribed under Clause 4.3 of the MLEP 2013, however strict compliance is unreasonable or unnecessary in the circumstances of this case and there are sufficient environmental planning grounds to justify contravening the development standard. The relevant arguments are set out later in this written request.

3. Relevant Caselaw

The grounds of objection are based upon the various tests of the recent judgements in the *NSW Land and Environment Court Case Wehbe v Pittwater Council (2007) 156 LGERA 446; [2007] NSWLEC 827, Initial Action Pty Ltd v Woollahra Municipal Council [2018] NSWLEC 118, Baron Corporation Pty Limited v Council of the City of Sydney [2019] NSWLEC 61, and RebelMH Neutral Bay Pty Limited v North Sydney Council [2019] NSWCA 130.*

The relevant steps identified in *Initial Action* (and the case law referred to in *Initial Action*) can be summarised as follows:

1. Is Clause 4.3 of MLEP 2013 a development standard?
2. Is the consent authority satisfied that this written request adequately addresses the matters required by clause 4.6(3) by demonstrating that:
 - (a) compliance is unreasonable or unnecessary; and
 - (b) there are sufficient environmental planning grounds to justify contravening the development standard?

4. Request for Variation

4.1 Is Clause 4.3 of MLEP 2013 a development standard?

- (a) The definition of “development standard” in clause 1.4 of the EP&A Act includes:

“(c) the character, location, siting, bulk, scale, shape, size, height, density, design or external appearance of a building or work”

“(d) the cubic content or floor space of a building”

Clause 4.3 relates to the height of a building. Accordingly, Clause 4.3 is a development standard.

4.2 Is compliance with Clause 4.3 unreasonable or unnecessary?

This request relies upon the First method identified by Preston CJ in *Wehbe*. The first way in *Wehbe* is to establish that the objectives of the standard are achieved.

In determining a merit-based assessment of the landscaped area for the proposed development, due consideration has been given to the above objectives and the planning principles set by the Land and Environment Court of NSW, Planning Principle – floor space ratio (*Salanitro-Chafei V Ashfield Council* (2005) NSWLEC 366) and *Project Venture Developments v Pittwater Council* (2005) NSW LEC 91).

It is acknowledged that the purpose of Clause 4.6 is to provide an appropriate degree of flexibility in applying certain development standards. In this regard, site topography should be considered when assessing the proposed height of buildings for the site. Given the proposed application is relatively minor and consistent with the built form character of the area, Council’s assessment should be focused on this numerical allowance as opposed to the variation to the specific standard.

By providing flexibility the subject proposal is capable of achieving a better development and design outcome which adequately caters for enhanced housing options for the residential needs within the Northern Beaches LGA, in particular the Balgowlah precinct.

The First Method

The proposal is consistent with the objectives of Clause 4.3, as outlined below:

The site is subject to a maximum building height control of 8.5m. The proposal includes a new roof to the eastern component of Unit 1. The roof line matches that existing which has a minor variation of 0.12m (1.4%) with a proposed maximum building height of 8.62m. The Development Application is supported by a Clause 4.6 Variation to Development Standard report. The proposed breach relates to a portion of the dwelling behind the existing top ridge height which will not be readily visible from the street. It is noted that the breach is the result of the sloping nature of the site, several existing man-made level changes which distort the existing ground level and the existing man-made changes. If the natural ground level was applied, the proposed variation would be consistent with other approvals granted in the area. It is noted that if the natural ground level was applied, the proposal would have a maximum building height of 7.88m. Regardless, the natural topography of the site makes compliance with the building height impractical, and therefore unreasonable for Council to enforce. The bulk and scale and two storey appearance to West Street is also retained. The proposal is supported and in our opinion is consistent with the objectives of the Clause, as outlined below:

(a) to provide for building heights and roof forms that are consistent with the topographic landscape, prevailing building height and desired future streetscape character in the locality,

This objective relates to streetscape character and in this regard the proposed dwelling has been designed to be consistent with the two-storey bulk and scale of West Street. The height, bulk, scale of the development, as reflected by floor space, are entirely consistent with the built form characteristics established by the enclave of surrounding development in this precinct noting the topography of the eastern side of West Street. It is our considered opinion that the proposal is

consistent with the intent and approvals granted in the area, therefore confirming that the proposal is consistent with the prevailing building height, roof forms and the future streetscape of the locality.

The proposed breach relates to a portion of the dwelling below the existing ridge height in the middle of the roof form for unit 1. The resulting variation is due to the natural topography and existing man-made changes which hinders the development when assessed with the ground level (existing) definition. If the merits of the 'Bettar' Court Case are utilised, the natural ground level enables a variation with that consistent with other developments. The proposal is consistent with the conclusions reached by Senior Commissioner Roseth in the matter of Project Venture Developments v Pittwater Council (2005) NSW LEC 191, in that we have formed the considered opinion that most observers would not find the proposed development by virtue of its roof form and building height, and in particular the non-compliant building height elements, offensive, jarring or unsympathetic in a streetscape context nor having regard to the built form characteristics of development within the sites visual catchment. The proposal is consistent with this objective notwithstanding the variation to the building height.

(b) to control the bulk and scale of buildings,

The proposal has been strategically designed to minimise the impact and bulk and scale of the project. The project architect has worked tirelessly to design a modern high-end dwelling that meets the sites constraints and the existing bulk and scale of the area. The proposal has been designed to be compatible with the existing streetscape while accommodating a bulk and scale that is complementary to the natural environment. The proposal maintains the building footprint with a functional change to the roof form in the middle of the dwelling below the existing ridge height. As assessed within objective (a) the proposal is consistent with the streetscape of West Street, which therefore dictates the bulk and scale for the locality.

(c) to minimise disruption to the following—

(i) views to nearby residential development from public spaces (including the harbour and foreshores),

Having inspected the site and its surrounds I am of the opinion that the building form and height of the proposed development, in particular that associated with the building height breaching elements, has been appropriately located within the site to minimise disruption of views to nearby residential development and from surrounding public spaces. The proposal is consistent with this objective notwithstanding the proposal variation to the building height.

(ii) views from nearby residential development to public spaces (including the harbour and foreshores),

Having regard to the view sharing principles established by the Land and Environment Court of NSW in the matter of Tenacity Consulting v Warringah [2004] NSWLEC 140 as they relate to an assessment of view impacts, I am satisfied that the proposed building height variation will not give rise to any unacceptable public or private view affectation. Whilst the proposal seeks a variation to the building height standard, view impacts have been minimised and a view sharing outcome achieved. The proposal is consistent with this objective notwithstanding the proposed building height variation.

(iii) views between public spaces (including the harbour and foreshores),

The building form and height has been appropriately distributed across the site such that the proposed variation to the building height will have no impact on views between public spaces. The proposal is consistent with this objective notwithstanding the proposed variation to the building height.

(d) to provide solar access to public and private open spaces and maintain adequate sunlight access to private open spaces and to habitable rooms of adjacent dwellings,

The application is accompanied by shadow diagrams drawings DA400 which depict the impact of shadowing on the neighbouring properties. The shadow diagrams demonstrate that the proposed development, in particular the non-compliant building height elements, will not cast shadows on the adjoining neighbours living room windows and private open space areas with compliant levels of solar access maintained between 9am and 3pm on 21st June. The proposal is consistent with this objective notwithstanding the building height breaching elements proposed.

(e) to ensure the height and bulk of any proposed building or structure in a recreation or environmental protection zone has regard to existing vegetation and topography and any other aspect that might conflict with bushland and surrounding land uses.

Not applicable – the site is not located within a recreation or environmental protection zone.

It is our professional opinion that the building by virtue of its height, bulk and scale, is consistent with the locality and desired character of the area. We have formed the considered opinion that the project is a sympathetic design and development with a bulk and scale consistent with the existing and future character of the area. The proposal is not offensive, or unsympathetic in a streetscape context nor the context from West Street, and therefore the variation can be supported by Northern Beaches Council.

For the reasons outlined within this written request, the proposal will achieve the objectives of Clause 4.3 and accordingly, are of the view that the proposal is consistent with the objectives of the development standard.

4.3 Are there sufficient environmental planning grounds to justify contravening the development standard?

There are sufficient environmental planning grounds to justify contravening the development standard. Whilst there is no requirement that the development comply with the objectives set out in clause 4.6(1) it is relevant to note that objective (b) provides:

*“to achieve better outcomes **for and from** development by allowing flexibility in particular circumstances.”*

It should be noted at the outset that in *Initial Action* the Court held that it is incorrect to hold that the lack of adverse impact on adjoining properties is not a sufficient ground justifying the development contravening the development standard when one way of demonstrating consistency with the objectives of a development standard is to show a lack of adverse impacts.

There is an absence of environmental harm arising from the contravention and positive planning benefits arising from the proposed development as outlined in detail above. From a planning perspective, there is sufficient grounds to justify the variation to the height of buildings development standard for the following reasons:

1. Historical excavation and site disturbance
2. Topography of the site
3. Characterisation of the development
4. Streetscape Appearance

- The sites topography and existing man-made excavation of the lower ground level distorts the height plane for the site. If the natural ground level was taken, the proposal would comply with the building height control.
- The proposed alterations and additions respond to the desired future character of the locality as depicted by the built form controls outlined in the Manly DCP. Furthermore, the subject dwelling will continue to integrate into the existing streetscape and pattern of development within West Street with the variation below the existing ridge height and not adequately viewed from the street.
- The development does not result in any unnecessary or undue bulk or visual impacts on adjoining properties and is of a scale that is compatible with the existing and surrounding buildings.
- The amenity impacts to neighbouring residential properties, arising from the non-compliant building height, is negligible. Adjoining properties will continue to receive suitable solar access, privacy impacts are suitably minimised, and views are reasonably maintained.
- The building height breach is minor and relates to only a small portion of the proposed alterations and additions only, which will largely be indiscernible when viewed from West Street.
- The proposal is consistent with the stance Council has taken on developments along West Street and surrounding streets noting numerous approvals granted for variations to the building height control. Most notably Council recently approved a variation to the building height for the adjoining property at premises 12B West Street.

Having regard to *Initial Action Pty Ltd v Woollahra Municipal Council* [2018] NSWLEC 118, and further to the proposal's consistency with the above strategic and statutory environmental planning provisions, the proposal is consistent with the following objectives under Section 1.3 of the Environmental Planning and Assessment Act 1979 (the Act):

*(c) to promote the orderly and economic use and development of land; and
(g) to promote good design and amenity of the built environment,*

1. In response to (c), the proposal will facilitate the orderly and economic use and development of the land in a manner that is desired by the planning controls because it will facilitate the revitalisation of the dwelling that is functional. In considering the contrary (refusal of the DA), retention of the building in its current form would not promote the orderly and economic use and development of land in the manner that council's strategic and statutory planning provisions seek. Retention of the building in its current form makes no advancement towards achieving the goal of creating functional development opportunities.

2. In response to (g) the proposal has been designed to promote good design and amenity of the built environment, with a consistent built form retained for West Street.

As outlined above, it is considered that in many respects, the proposal will provide for a better planning outcome than a strictly compliant development. At the very least, there are sufficient environmental planning grounds to justify contravening the development standard.

Based on the above, it has been demonstrated that there are sufficient environmental planning grounds to justify the proposed height of buildings non-compliance in this instance.

5 Conclusion

Pursuant to clause 4.6(3), the consent authority is satisfied that the applicant's written request has adequately addressed the matters required to be demonstrated by subclause (3) being:

- (a) that compliance with the development standard is unreasonable or unnecessary in the circumstances of the case, and*
- (b) that there are sufficient environmental planning grounds to justify contravening the development standard.*

As such, I have formed the highly considered opinion that there is no statutory or environmental planning impediment to the granting of a height of buildings variation in this instance.
