## Design Statement

The site at 65 Seaforth Crescent is surrounded by breath taking views and a variety of local and exotic plant species. The terrain is steep and prone to erosion. Access throughout the site is required from the road down to the foreshore and to many levels of the proposed Architecture as well.

The client has a desire to be a part of the harbour community with specific interests in fishing and boating. In keeping with the local expectations our client has high end taste.

In response to the specifics of the design brief I intend to combine the feel of the local flora with luxurious finishes. Special attention has been put into improving access to the boat house using a raised board walks treading lightly on the ground. The planting scheme incorporates canopy trees with mounding shrubs and matting ground covers. While plantings are deemed low water use they have been selected appropriately for the specific conditions of a steep, South facing site likely made up of shallow soils and rock escarpments.

It is intended that the gardens will be well maintain by qualified horticulturalists on a regular basis to ensure its best chance of success.

Kind Regards,

Mark Hill
