Jensen Hughes Australia

Providing building regulations, fire engineering, accessibility, and energy consulting services to NSW for over 25 years

Our story begins in 1997 with the founding of BCA Logic to fulfill the demand of a consultancy company whose expertise expanded across the entire life cycle of a building, from consulting on the initial planning through to construction and occupation.

BCA Logic joined Jensen Hughes in 2021, a leading global, multi-disciplinary engineering, consulting and technology firm focused on safety, security and resiliency. We continue to be at the forefront of our industry and work thoroughly to preserve our position by ensuring the successful delivery of projects.

Jensen Hughes was launched in 2014 through the historic merger of Hughes Associates and Rolf Jensen & Associates (RJA), two of the most experienced and respected fire protection engineering companies at the time. Since then, we have gained market leadership in nuclear risk consulting and established commanding positions in areas like forensic engineering, security risk consulting and emergency management. Over the past 22 years, our integration of more than 30 privately held engineering and consulting firms has dramatically expanded our global footprint, giving us a powerful market presence ten times larger than our nearest competitor in some of our markets and extending our historical lineage back to 1939.

With more than 90 offices and 1500 employees worldwide supporting clients globally across all markets, we utilise our geographic reach to help better serve the needs of our local, regional, and multinational clients. In every market, our teams are deeply entrenched in local communities, which is important to establishing trust and delivering on our promises.

Executive Summary

This document provides an assessment of the architectural design drawings for the proposed eight unit apartment development at 52&54 Brighton Street, Freshwater, against the Deemed-to-Satisfy provisions of the Building Code of Australia (BCA) 2022, Volume 1.

Part 3 'Matters for Further Consideration' of this report outlines the identified BCA compliance issues that require further information or consideration and/or assessment as Performance Solutions.

Any Performance Solution will need to be detailed in a separate report and must clearly indicate methodologies for achieving compliance with the relevant BCA Performance Requirements.

Item	Description	BCA Provisions		
Perform	aance Solutions Required			
1.	Allow for a non-fire isolated stairway connecting four storeys with two being for residential use and two being ancillary use.	D2D4		
2.	Allow for travel distances to an exit on the First Floor exceeding the required 6m	D2D5		
	The provision of EV charging bay will be considered a special hazard and required to be addressed within the	E1D17		
3.	Fire Engineering Report.	E2D21		
4.	The construction of external walls is such that they will prevent the penetration of water that could cause unhealthy or dangerous conditions or loss of amenity to occupants and undue dampness or deterioration of building elements.	F3D5		
Further Information Required				
1.	Details of Home Batteries are to be provided as they may need separation from the remainder of the building.	C3D13		
2.	Swimming pool barriers and gate to be compliant with the relevant Act, Regulations and Standards.	G1		

1.0 Basis of Assessment

1.1 LOCATION AND DDSCRIPTION

The eight (8) unit apartment building development, the subject of this report, is located at 52 & 54 Brighton Street, Freshwater. The proposal contains a two storey residential building located above a basement carpark and store room. The residential units are provided with open walkways to gain access to the top floor and the top floor SOU are provided with roof top terraces.

Both vehicular and pedestrian access to the building is provided via Brighton Street.

1.2 PURPOSE

The purpose of this report is to assess the current design proposal against the Deemed-to-Satisfy Provisions of BCA 2022, Amendment 1, and to clearly outline those areas (if any) where compliance is not achieved, where areas may warrant redesign to achieve strict BCA compliance or where areas may be able to be assessed against the relevant performance criteria of BCA 2022. Such assessment against relevant performance criteria of a separate Performance Based Fire Safety Engineered Assessment Report to be prepared under separate cover.

1.3 BUILDING CODE OF AUSTRALIA

This report is based on the Deemed-to-Satisfy Provisions of the National Construction Code Series Volume 1 – Building Code of Australia, 2022 (BCA) incorporating the State variations where applicable. Please note that the version of the BCA applicable to new building works is the version applicable at the time of the lodgement of the Construction Certificate application to the Accredited Certifying Authority. The BCA is updated generally on a three-yearly cycle, starting from the 1st of May 2016.

1.4 LIMITATIONS

This report does not include nor imply any detailed assessment for design, compliance or upgrading for:

- a. the structural adequacy or design of the building;
- b. the inherent derived fire-resistance ratings of any proposed structural elements of the building (unless specifically referred to); and
- c. the design basis and/or

This report does not include, or imply compliance with:

- a. the National Construction Code Plumbing Code of Australia Volume 3
- b. the Disability Discrimination Act 1992 including the Disability ((Access to Premises Buildings) Standards 2010 – unless specifically referred to);
- c. he deemed to satisfy provision of Part D4 and F4D5 of BCA2022 ;
- d. Demolition Standards not referred to by the BCA;
- e. Work Health and Safety Act 2011;
- f. Requirements of Australian Standards unless specifically referred to;
- g. Requirements of other Regulatory Authorities including, but not limited to, Telstra, Telecommunications Supply Authority, Water Supply Authority, Electricity Supply Authority,

Work Cover, Roads and Maritime Services (RMS), Local Council, ARTC, Department of Planning and the like; and

h. Conditions of Development Consent issued by the Local Consent Authority.

1.5 DESIGN DOCUMENTATION

This report has been based on the Design plans and Specifications listed in Annexure A of this Report.

2.0 Building Description

For the purposes of the Building Code of Australia (BCA) the development may be described as follows.

2.1 RISE IN STOREYS (CLAUSE C2D3)

The building has a rise in storeys of four (4).

Note: This is based upon the stairway to the services storey exposing the external wall of the building for more than 1m due to the provision of the lightwell therefore considering this storey within the rise in storey.

2.2 CLASSIFICATION (CLAUSE A6G1)

The building has been classified as follows.

Table 1: Building Classification(s)

Class	Level	Description
Class 7a	Basement Floor and Services Level	Carpark
Class 2	Ground and First Floor	Residential

Note: The services floor is consdiered to form part of the Class 7a classification as this is a services area and in accordance with A6G1 the classification for the major use of the fire compartment shall be applied.

2.3 EFFECTIVE HEIGHT (CLAUSE A1G4)

The building has an effective height of less than 12 metres. (RL 16.1 – RL 6.6 = 9.5m)

2.4 TYPE OF CONSTRUCTION REQUIRED (TABLE C2D2)

The building is required to be of Type A Construction.

2.5 FLOOR AREA AND VOLUME LIMITATIONS (TABLE C3D3)

Class 7a The carpark is to be provided with a sprinkler system (other than a FPAA101D or FPAA101H system) complying with Specification E1.5) and as such there are no maximum floor area or volume limitations for this area.

Class 2 The Class 2 portions of the building are not subject to floor area and volume limitations of C3D3 as Table 3 of Specifications C2D2 and Clause C4D12 of the BCA regulates the compartmentation and separation provisions applicable to buildings, or building portions, of Class 2 classifications.

2.6 FIRE COMPARTMENTS

The following fire compartments have been assumed:

a. Residential levels are one fire compartment

b. Basement carpark and Service Level is another fire compartment

2.7 EXITS

The following points in the building have been considered as the exits:

a. The first tread of each non-fire isolated stairway serving the building.

2.8 CLIMATE ZONE (CLAUSE A1G4)

The building is located within Climate Zone 5

2.9 LOCATION OF FIRE-SOURCE FEATURES

The fire source features for the subject development are:

North: The far boundary of Brighton Street

South: The common boundary of 17 & 19 Robert Street

- East: The common boundary of 50 Brighton Street
- West: The common boundary of 56 Brighton Street

In accordance with Clause 2.1 of Specification 5, a part of a building element is exposed to a fire-source feature if any of the horizontal straight lines between that part and the fire-source feature, or vertical projection of the feature, is not obstructed by another part of the building that–

- a. has an FRL of not less than 30/-/-; and
- b. is neither transparent nor translucent.

3.0 BCA Assessment

3.1 INTRODUCTION

The assessment undertaken is in relation to the plans prepared for the development consent application. The technical details required for a development consent are far less than that required for a construction certificate (CC) and as such, this assessment is designed to address a higher-level assessment of the building against the provisions of the BCA.

The main purpose of this report is to address any major design changes required to the building, services required to be installed, and the fundamentals of design required by sections C, D, E, F, G and H (where applicable) of the BCA. This report does not address the design requirements for the structure of the building (Section B), or for the detailed design of services (Section E).

The summary below is to be read in conjunction with the BCA specification contained in Annexure F of the report.

3.2 RELATIONSHIP TO THE DESIGN AND BUILDING PRACTITIONERS ACT

The Design and Building Practitioners Act requires certain specified design to be certified by a Registered Practitioner and the issuing of a Design Compliance Declaration (DCD). The declared designs include:

- Structure
- Building Enclosure (e.g. Façade);
- + Fire Safety Systems (e.g. services, egress and FRL's)
- + Waterproofing
- + Fire Safety performance solutions

This report contains an assessment of the plans and specifications available, which are not sufficient in detail to allow any DCD to be issued by others. This report is not to be construed as or used to support to a DCD at CC stage as it is based on development application drawings only.

3.3 FIRE RESISTANCE AND STABILITY – PART C2 & SPECIFICATION 5

The required fire resistance levels for the building elements are outlined in Annexure C.

The external walls and all components of the wall, in a building of Type A construction, are required to be non-combustible. The plans do not indicate the materials of the external wall and further details will be required to be submitted at CC stage for assessment, however compliance is readily achievable by a number of common wall types.

All newly constructed ancillary attachments (i.e privacy screens etc) shall be constructed of non-combustible materials, further details will be required at CC stage to confirm compliance with Clause C2D14.

Linings, materials and assemblies are required to maintain the required fire hazard properties in accordance with BCA Clause C2D11 and Specification 7. Documentation shall be provided as part of the Construction Certificate package to detail compliance being maintained.

Subject to the required FRL's being provided, the proposed building is capable of complying with the requirements of the BCA with respect to fire resistance.

3.4 COMPARTMENTATION AND SEPARATION – PART C3

Under the provisions of clause C3D3 of the BCA, the residential portion of the building is not the subject to any floor area and volume limitations.

The carpark is not required to have sprinklers, and therefore is subject to the floor area and volume limitations of the BCA. The proposed floor area and volume of the carpark is less than that permitted by clause C3D3 of the BCA and therefore compliance is achieved.

Clause C3D7 of the BCA requires suitable vertical and/or horizontal spandrel separation between the openings in the external walls on different storeys. The plans indicate suitable spandrels are provided by a combination of horizontal balcony slabs and vertical walls beneath windows. The walls beneath the windows are required to be a minimum of 900mm high with 600mm above the slab, and an FRL of 60/60/60. No specific details of the spandrel walls have been provided to allow assessment however compliance is readily achievable.

Separation of equipment such as a battery system installed in the building that has a total voltage of 12 volts or more and a storage capacity of 200 kWh or more is required where applicable. Details of the Home Batteries that are located at within each Garage space on Basement Floor are required to determine the compliance with BCA Clause C3D13.

Compliance with Part C3 of the BCA can be readily achieved by the proposal.

3.5 PROTECTION OF OPENINGS – PART C4

3.5.1 Openings in External Walls

The external walls are proposed to be non-loadbearing and are located more than 3m from any boundary. As such there is no requirement to protect any openings within the external walls.

3.5.2 Bounding Construction

The SOUS are noted to open onto an open walkway and would be able to comply with the requirements if C4D12 with regards to Clause 9 due to the open nature and the single exit being provided. This will require the external walls, doors and window openings to be provided in accordance with this portion of the Clause.

3.5.3 Openings in Floors for Services and Service Installations

Where electrical, plumbing, mechanical or other services pass through an element of construction that is required to achieve a fire resistance level (FRL), the service installation shall not compromise the fire resistance level of the element. As such, the service installation must be fire sealed with a compliant system such as fire collar on PVC pipes or fire rated mastic on electrical cables.

3.6 OCCUPANT ACCESS AND EGRESS – SECTION D

3.6.1 Egress from the Building

Egress from the carpark is required in sufficient numbers and location to ensure that no point on the floor is more than 20m from and exit, or a point of choice of two exits, in which case the distance to one of those exits is not more than 40m, as required by clause D2D5 of the BCA.

The distance between alternative exits is required by Clause D2D6 of the BCA to be no closer than 9m and no further apart than 60m when measured through the point of choice. The travel distances between exits comply with the above requirements.

In the residential portion of the building, the distance to an exit on the ground floor is permitted to be 20m. The distance to an exit on other floors is to be no more than 6m (12m for a sprinkler protected building) from any point on the floor to an exit, or a point of choice of 2 exits in which case the distance between those 2 exits is to exceed 45m.

Egress from the residential first floor is required in sufficient numbers to ensure that the front door of the SOU is no more than 6m from an exit. The travel distances from the First Floor SOUs are approximately 10m in lieu of the required 6m and is thus non-compliant, this will require a Fire Engineering Performance Solution.

The building has more than 3 storeys connected by a stairway, and therefore under the provisions of clause D2D4 of the BCA, the building is not permitted to have non fire isolated stairways and will need to be addressed under a Fire Engineering Report..

Dimensioned details of all exit paths including the fire stairs will be required at CC stage to confirm that a minimum egress width of at least 1 metre (measured clear of any obstructions or handrails) is maintained throughout the entirety of the exit as required by Clause D2D8.

Where the egress discharges to open space on the property, a continuous pathway from the point of discharge to the street is required. The plans do indicate such a pathway and as such the provisions of Clause D2D15 of the BCA are readily satisfied.

Electrical distribution cupboards are to be provided with smoke separation to satisfy the requirements of BCA D3D8. The doors are to be lined internally with fire grade plasterboard or metal backing sheets and smoke seals provided to all four sides, including drop down seals on the bottom. All penetrations from the enclosure are to be suitable sealed against smoke spread by sealing with fire mastic.

Details of treads and risers, landings, thresholds, balustrades and handrails have not been provided however compliance is readily achievable. The design of these elements can be assessed at the CC stage.

3.7 SERVICES AND EQUIPMENT – PART E1, E2 AND E4

The building is required to be provided with the services and equipment set out in Annexure B of this report. The annexure also outlines the standard of performance to be achieved by the services and equipment.

Suitable additional provision must be made if special problems of fighting fire could arise due to the nature or quantity of materials being stored as per BCA Clause E1D17. Additional smoke hazard management measures may be necessary due to the special type or quantity of materials being stored or used in a building as per BCA Clause E2D21. Thus, the provision of the EV charging bay will require Fire Engineering Performance Solution.

3.8 LIFT INSTALLATIONS – PART E3

Lifts are provided to the building and are located in their own shaft and are serviced by a common lobby. The lifts do not require a stretcher facility as the building is under 12m in effective height and the dimensions of the shaft are sufficient to allow compliance.

3.9 FACILITIES IN THE RESIDENTIAL BUILDINGS – PART F4

Clause F4D2 of the BCA requires the following facilities within a Class 2 building:

- > Kitchen sink;
- > Bath or shower;
- > Closet pan;
- > Washbasin
- > Laundry facilities

The plans indicate that each of these facilities are provided within each sole occupancy unit and therefore compliance is achieved with Clause F4D2 of the BCA.

3.10 ROOM HEIGHTS – PART F5

The ceiling heights have been assessed in accordance with Part F5 of the BCA which has indicated that compliance is readily achievable within all habitable spaces, corridors and the like.

3.11 LIGHT AND VENTILATION – PART F6

Natural light and ventilation are required to all habitable rooms within a class 2 building. The plans have been assessed which reveals all habitable spaces are services by windows or glazed doors. The area of the doors and windows are sufficient in size to provide the required minimum natural light and ventilation to all habitable rooms.

The carpark is required to be provided with a system of mechanical ventilation where required by clause F6D11 of the BCA.

3.12 SOUND TRANSMISSION AND INSULATION – PART F7

The bounding walls between the Class 2 sole occupancy units and the walls which separate the units from the lobbies, lift and service shafts must meet the sound insulation requirements of this part. Compliance is readily achievable at CC stage.

3.13 MINOR STRUCTURE AND COMPONENTS – PART G1

Swimming Pool must have compliant barriers with D4D11, Swimming Pools Act 1992 and its Regulations 2018. Swimming pool fencing are required to have a height of 1.2m in accordance with Clause 2.1 of AS1926.1-2012 and Clause 5.24 of AS1288-2006. A non-climbable zone of 900mm is required as per Clause 2.2.2 of AS1926.1-2012.

Swimming pool gates must swing outwards as per Clause 2.4.1.1 of AS1926.1-2012. Furthermore, the gate must have a self-closing device as per Clause 2.4.1.2 and a locking latch as per Clause 2.4.1.3 and 2.4.2 of AS1926.1-2012.

Resuscitation sign required to all swimming pool areas with a minimum size of 300x300mm, made of durable and waterproof material displaying the procedures for first aid including performing cardiopulmonary resuscitation as per Section 17 of the Swimming Pools Act 1992.

4.0 Statement of Compliance

The plans assessed were developed to a standard suitable for submission as a development application and do not contain all the details necessary to allow a CC to be issued. As such, this assessment was limited to the major items of the BCA with the view of identifying any items that may result in a modified development consent being required, or additional key items that need to be included in the design.

The architectural design documentation as referred to in report has been assessed against the applicable provisions of the Building Code of Australia (BCA) and it is considered that such documentation complies or is capable of complying with that Code.

Annexure A: Design Documentation

This report has been based on the following design documentation.

Table 2: Architectural Plans

Architectural Plans Prepared by Walsh Architects				
Drawing Number	Revision	Date	Title

DA301	В	DA100	Elevations – Sheet 2	

Annexure B - Essential Services

The following fire safety measures are required to be installed in the building. The following table may be required to be updated as the design develops and options for compliance are confirmed.

This section provides information for the design team, including service designers, and may need to be updated upon receipt of final designs and performance solutions at the construction approval stage.

Item	Essential Fire and Other Safety Measures	Standard of Performance			
Fire R	Fire Resistance (Floors – Walls – Doors – Shafts)

	2. Mechanical ventilation to carpark.	AS 1668.1:2015 (Amdt 1)	
		Note: 5.5.3 Override control	
15.		To enable manual control by attending emergency services personnel, fans that are not required to shut down on initiation of fire mode in the car park shall be provided with a control switch at the designated building entry point.	
		Note: Signage should be located at the car park entry indicating the location of the control switches.	

Annexure C - Fire Resistance Levels

The following fire resistance levels (FRL's) are required for the various building elements, with a fire source feature being the far boundary of a road adjoining the allotment, a side or rear boundary or an external wall of another building on the allotment except a Class 10 structure.

Type A Construction

Table 10. T	pe A Construction		
Item	Class 2	Class 7a	
Loadbearing External Walls (including columns and other building elements incorporated therein)	90/90/90	120/120/120	
- Less than 1.5m to a <i>fire-source feature</i>	90/60/60	120/90/90	
- 1.5 – less than 3m from a <i>fire-source</i> <i>feature</i>	90/60/30	120/60/30	
- 3m or more from a <i>fire-source feature</i>			
Non-Loadbearing External Walls	-/90/90	-/120/120	
- Less than 1.5m to a <i>fire-source feature</i>	-/60/60	-/90/90	
- 1.5 – less than 3m from a <i>fire-source</i> <i>feature</i>	-/-/-	-/-/-	
- 3m or more from a fire-source feature			
External Columns - Loadbearing	90/-/-	120/-/-	
- Non-loadbearing	-/-/-	-/-/-	
Common Walls & Fire Walls	90/90/90	120/120/120	
Stair and Lift Shafts required to be fire-resisting	00/00/00	400/400/400	
- Loadbearing	90/90/90	120/120/120	
- Non-loadbearing	-/90/90	-/120/120	

Page 21 of 31 | Project Number: 117866 | Report Type: BCA | R: 2

Item	Class 2	Class 7a
Internal walls bounding sole occupancy units		
- Loadbearing	90/90/90	120/-/-
- Non-loadbearing	-/60/60	-/-/-
Internal walls bounding public corridors, public lobbies and the like:		
- Loadbearing	90/90/90	120/-/-
- Non-loadbearing	-/60/60	-/-/-
Ventilating, pipe, garbage and like shafts:		
- Loadbearing	90/90/90	120/90/90
- Non-loadbearing	-/90/90	-/90/90
Other loadbearing internal walls, beams trusses and columns	90/-/-	120/-/-
Floors	90/90/90	120/120/120
Roofs ¹	90/60/30	120/60/30

1 The roof need not comply with any FRL's due to the classification of the building.

Annexure E – Definitions

Average specific extinction area

Average specific extinction area means the average specific extinction area for smoke as determined by AS 5637.1:2015.

Critical radiant flux

Critical radiant flux (CRF) means the critical heat flux at extinguishment (CHF in kW/m²) as determined by AS ISO 9239.1:2003.

Designated bushfire prone area

Designated bushfire prone area means land which has been designated under a power of legislation as being subject, or likely to be subject, to bushfires.

Effective height

Effective height means the vertical distance between the floor of the lowest storey included in a determination of rise in storeys and the floor of the topmost storey (excluding the topmost storey if it contains only heating, ventilating, lift or other equipment, water tanks or similar service units).

Envelope

Envelope, for the purposes of Section J in Volume One, means the parts of a building's fabric that separate a conditioned space or habitable room from—

- a. the exterior of the building; or
- b. a non-conditioned space including
 - i. the floor of a rooftop plant room, lift-machine room or the like; and
 - ii. the floor above a carpark or warehouse; and
 - iii. the common wall with a carpark, warehouse or the like.

Exit

Exit means –

- a. Any, or any combination of the following if they provide egress to a road or open space
 - i. An internal or external stairway.
 - ii. A ramp.
 - iii. A fire-isolated passageway.
 - iv. A doorway opening to a road or open space.
 - v. A horizontal exit or a fire-isolated passageway leading to a horizontal exit.

Fire compartment

Fire compartment means –

- a. the total space of a building; or
- b. when referred to in—

- i. the Performance Requirements any part of a building separated from the remainder by barriers to fire such as walls and/or floors having an appropriate resistance to the spread of fire with any openings adequately protected; or
- ii. the Deemed-to-Satisfy Provisions any part of a building separated from the remainder by walls and/or floors each having an FRL not less than that required for a fire wall for that type of construction and where all openings in the separating construction are protected in accordance with the Deemed-to Satisfy Provisions of the relevant Part.

Fire-resistance level (FRL)

Fire-resistance level (FRL) means the grading periods in minutes determined in accordance with Specification A2.3, for the following criteria—

- a. structural adequacy; and
- b. integrity; and
- c. insulation,

and expressed in that order.

Note: A dash means that there is no requirement for that criterion. For example, 90/-/- means there is no requirement for an FRL for integrity and insulation, and -/-/- means there is no requirement for an FRL.

Fire-source feature

- a. the far boundary of a road, river, lake or the like adjoining the allotment; or
- b. a side or rear boundary of the allotment; or
- c. an external wall of another building on the allotment which is not a Class 10 building

Fire wall

Fire wall means a wall with an appropriate resistance to the spread of fire that divides a storey or building into fire compartments.

Flammability index

Flammability Index means the index number as determined by AS 1530.2:1993.

Group number

Group number means the number of one of 4 groups of materials used in the regulation of fire hazard properties and applied to materials used as a finish, surface, lining, or attachment to a wall or ceiling.

Loadbearing

Intended to resist vertical forces additional to those due to its own weight.

Non-combustible

Non-combustible means-

 a. applied to a material — not deemed combustible as determined by AS 1530.1:1994 — Combustibility Tests for Materials; and b. applied to construction or part of a building — constructed wholly of materials that are not deemed combustible

Occupiable outdoor area

Occupiable outdoor area means a space on a roof, balcony or similar part of a building-

- a. that is open to the sky; and
- b. to which access is provided, other than access only for maintenance; and
- c. that is not open space or directly connected with open space.

Open space

Open space means a space on the allotment, or a roof or similar part of a building adequately protected from fire, open to the sky and connected directly with a public road.

Performance Requirement

Performance Requirement means a requirement which states the level of performance which a Performance Solution or Deemed-to-Satisfy Solution must meet.

Performance Solution

Performance Solution means a method of complying with the Performance Requirements other than by a Deemed-to-Satisfy Solution.

Sarking-type material

Sarking-type material means a material such as a reflective insulation or other flexible membrane of a type normally used for a purpose such as waterproofing, vapour management or thermal reflectance.

Smoke developed index

Smoke developed index means the index number for smoke as determined by AS/NZS 1530.3.

Smoke development rate

Smoke development rate means the development rate for smoke as determined by testing flooring materials in accordance with AS ISO 9239.1.

Smoke growth rate index

Smoke growth rate index (SMOGRA RC) means the index number for smoke used in the regulation of fire hazard properties and applied to materials used as a finish, surface, lining or attachment to a wall or ceiling.

Sole-occupancy unit

Sole-occupancy unit means a room or other part of a building for occupation by one or joint owner, lessee, tenant, or other occupier to the exclusion of any other owner, lessee, tenant, or other occupier and includes—

- a. a dwelling; or
- b. a room or suite of rooms in a Class 3 building which includes sleeping facilities; or
- c. a room or suite of associated rooms in a Class 5, 6, 7, 8 or 9 building; or

d. a room or suite of associated rooms in a Class 9c building, which includes sleeping facilities and any area for the exclusive use of a resident.

Annexure F – BCA Compliance Specification

The following BCA matters are to be addressed by specific BCA Design Certificate to be issued by the relevant architectural, services and engineering consultants at the Construction Certificate Stage. This schedule should be forwarded to all consultants to obtain verification that these items have and will be included in the design documentation / specifications:

Architectural Design Certification

- 1. The FRL's of building elements for the proposed works have been designed in accordance with Table 3 of Specification 5 of BCA 2022 for a building of Type A Construction.
- 2. Lightweight construction used to achieve required fire resistance levels will comply with Specification 6 of BCA 2022.
- 3. Building elements, including external walls and their components, must be non-combustible in accordance with C2D10 of BCA 2022.
- 4. Materials, floor and wall linings/coverings, surface finishes and air-handling ductwork used in the works will comply with the fire hazard properties of Clause C2D11 and Specification 5 of BCA 2022.
- 5. Any ancillary elements fixed, installed or attached to the internal parts or external face of an external wall that is required to be non-combustible will comply with Clause C2D14 of BCA 2022.
- 6. Vertical separation will be provided to the new openings in the external walls in accordance with Clause C3D7 of BCA 2022. It is noted that no spandrel separation is required in the stairway or to a void.
- 7. Floors separating storeys of different classifications will comply with BCA Clause C3D10 of BCA 2022.
- 8. Equipment will be separated in accordance with Clause C3D13 of BCA 2022.
- Any main switch room sustaining emergency equipment required to operate in emergency mode, will be separated from the remaining building with construction having an FRL 120/120/120 and provided with self-closing -/120/130 fire doors in accordance with Clause C3D14 of BCA 2022.
- Services penetrating elements required to possess an FRL including the floor slabs, walls, shafts, etc. will be protected in accordance with Clause C4D13, C4D14 and C4D15 and Specification 13 of BCA 2022.
- 11. Construction joints, spaces, and the like in and between building elements required to be fire-resisting with respect to integrity and insulation will be protected in accordance with BCA Clause C4D16.
- 12. The lift doors will be --/60/- fire doors complying with AS 1735.11:1986 in accordance Clause C4D11 of BCA 2022.
- 13. Doorways and other openings in internal walls required to have an FRL will be protected in accordance with Clause C4D12 of BCA 2022.
- 14. Columns protected by lightweight construction will achieve an FRL not less than the FRL for the element it is penetrating, in accordance with Clause C4D17 of BCA 2022.
- 15. A lintel will have the FRL required for the part of the building in which it is situated, unless it does not contribute to the support of a fire door, fire window or fire shutter, and it spans an opening in masonry which is not more than 150 mm thick and is not more than 3m wide if the masonry is non-loadbearing; or not more than 1.8m wide if the masonry is loadbearing and part of a solid wall or one of the leaves of a cavity wall, or it spans an opening in a non-loadbearing wall of the Class 2 or 3 building, in accordance with Specification 5 Clause S5C4 BCA 2022.

- 16. The top and bottom of the riser shafts will achieve an FRL not less than the FRL required for the walls of the shaft in accordance with Clause S5C8 of Specification 5 of BCA2022.
- 17. Fire doors will comply with AS 1905.1:2015 and Specification 11 of BCA 2022.
- 18. Travel distances to exits will be in accordance with Clause D2D5 of BCA 2022.
- 19. The alternative exits will be distributed uniformly around the storey and will not be less than 9m apart, and not more that 45m apart in the residential portion or 60m, in accordance with Clause D2D6 of BCA 2022.
- 20. The dimensions of exits and paths of travel to exits will be provided in accordance with Clause D2D7 of BCA 2022.
- 21. Discharge from exits will be in accordance with Clause D2D15 of BCA 2022.
- 22. Access to the lift pit will be in accordance with Clause D2D22 of BCA 2022.
- 23. The non-fire isolated stairs will be constructed in accordance with Clause D3D4 of BCA 2022.
- 24. The construction of EDB's and telecommunications distribution boards will be in accordance with Clause D3D8 of BCA2022 with the enclosure bounded by non-combustible construction or fire protective covering and smoke seals provided around the perimeter of the non-combustible doors and any openings sealed with non-combustible mastic to prevent smoke spreading from the enclosure.
- 25. The enclosing walls and ceiling under the non-fire-isolated stairway will achieve an FRL of 60/60/60, and have a self-closing -/60/30 fire door, in accordance with Clause D3D9 of BCA 2022.
- 26. New pedestrian ramps will comply with AS 1428.1:2009, Clause D3D11 and Part D3 of BCA 2022.The floor surface of a ramp must have a slip-resistance classification complying with Table D3D14 when tested in accordance with AS 4586:2013.
- 27. The roof of the building where the exit discharges will have an FRL of 120/120/120 and will not have roof lights or openings within 3m of the path of travel in accordance with Clause D3D13 of BCA 2022.
- 28. Stair geometry to the new stairways will be in accordance with Clause D3D14 of BCA 2022. Stair treads are to have a surface with a slip-resistance classification complying with Table D3D14 when tested in accordance with AS 4586:2013.
- 29. Landings and door thresholds throughout the development will be provided in accordance with Clause D3D14 and D3D16 of BCA 2022. Landings to have either a surface with a slip-resistance classification complying with Table D3D15 when tested in accordance with AS 4586:2013 or a strip at the edge of the landing with a slip-resistance classification complying with Table D3D15 when tested in accordance with AS 4586:2013 when the edge ledge to a flight below.
- 30. The handrails and balustrades to all stairs and throughout the building will be in accordance with Clause D3D17, and D3D22 of BCA 2022.
- 31. The doorways and doors will be in accordance with Clause D3D23 and D3D25 of BCA 2022.
- 32. Door latching mechanisms will be in accordance with Clause D3D26 of BCA 2022.
- 33. Non-illuminated exit signage will be installed in accordance with Clause E4D7 and of BCA 2022.
- 34. External above ground waterproofing membranes will comply with Clause F1D5 of BCA 2022. and AS 4654 Parts 1 & 2:2012.
- 35. The new roof covering will be in accordance with Clause F3D2 of BCA 2022.
- 36. Any sarking proposed will be installed in accordance with Clause F3D4 of BCA 2022.

- 37. Waterproofing of all wet areas to the building will be carried out in accordance with Clause F2D2 of BCA 2022 and AS 3740:2010.
- 38. Damp proofing of the proposed structure will be carried out in accordance with Clause F1D6 and F1D7 of BCA 2022.
- 39. Floor wastes will be installed to bathrooms and laundries above sole occupancy units or public space in accordance with Clause F2D4 of BCA 2022.
- 40. Sub-floor ventilation will be provided in accordance with Clause F1D8 of BCA 2022.
- 41. All new glazing to be installed throughout the development will be in accordance with Clause F3D4 of BCA 2022. and AS 1288:2006 / AS 2047:2014.
- 42. Sanitary facilities will be provided in the building in accordance with Clause F4D2of BCA 2022.
- 43. The construction of the sanitary facilities will be in accordance with Clause F2.5 of BCA 2022.
- 44. Ceiling heights to the new areas will be in accordance with Clause F5D2 of BCA 2022.
- 45. Natural light will be provided in accordance with Clause F6D2, F6D3, and F6D4 of BCA 2022.
- 46. Natural ventilation will be provided in accordance with Clause F6D6, F6D7 and F6D8 of BCA 2022.
- 47. The sanitary compartments will be either be provided with mechanical exhaust ventilation or an airlock in accordance with Clause F6D10 of BCA 2022.
- 48. Pliable building membranes installed in external walls will comply with Clause F8D3 of BCA 2022 and where a pliable building membrane is not installed in an external wall, the primary water control layer will be separated from water sensitive materials by a drained cavity.
- 49. Every storey of the carpark will be provided with an adequate system of permanent natural or mechanical ventilation in accordance with Clause F6D11 of BCA 2022.
- 50. A safe manner for cleaning of windows located 3 or more storeys above ground level will be provided in accordance with the Work Health & Safety Act 2011 and regulations made under that Act in accordance with NSW G1D5 of BCA 2022.
- 51. The swimming pool associated with the new building will comply with Clause G1D2 of the BCA 2022 and AS 1926 parts 1 and 2. (Note: Excludes NSW. See NSW G1.1 Variation below)
- 52. The construction of the residential portions of the development will be undertaken in accordance with the relevant BASIX commitments that form part of the Development Consent approval.
- 53. Essential fire or other safety measures must be maintained and certified on an ongoing basis, in accordance with the provisions of the Environmental Planning and Assessment Regulation, 2000.
- 54. Building Fabric and Thermal Construction will be in accordance with Part J4 of BCA 2022.
- 55. Glazing will be in accordance with Part J4 of BCA 2022.
- 56. Building sealing will be in accordance with Part J5 of BCA 2022.
- 57. Facilities for Energy Monitoring will be provided in accordance with Clause J9D3 of BCA 2022.

Electrical Services Design Certification:

- 58. A smoke detection and alarm system will be installed throughout the building in accordance with Part E2, and Specification 20 of BCA 2022.
- 59. Emergency lighting will be installed throughout the development in accordance with Clause E4D2, E4D4 of BCA 2022 and AS/NZS 2293.1:2018.

- 60. Exit signage will be installed in accordance with Clause E4D5, E4D7, and E4D8 of BCA 2022 and AS/NZS 2293.1:2018.
- 61. Artificial lighting will be installed throughout the development in accordance Clause F6D5 of BCA 2022 and AS/NZS 1680.0:2009.
- 62. Lighting power and controls will be installed in accordance with Part J7 of BCA 2022.
- 63. Electrical conductors located within the building that supply a main switchboard that sustains emergency equipment will comply with Clause C3D14 of BCA 2022.

Hydraulic Services Design Certification:

- Storm water drainage will be provided in accordance with Clause F1D3 of BCA 2022 and AS/NZS 3500.3:2018
- Fire hydrant system will be installed in accordance with Clause E1D2 of BCA 2022 and AS 2419.1:2021 as required.
- A sprinkler system will be installed in accordance with Clause E1D4 of BCA2022 Specification 17/18 and appropriate part(s) of AS 2118.
- 67. Fire hose reels will be installed in accordance with Clause E1D3 of BCA 2022 and AS 2441:2005.
- 68. Portable fire extinguishers will be installed in accordance with Clause E1D14 of BCA 2022 and AS 2444:2001.
- 69. The heated water supply systems will be designed and installed to NCC Volume 3 Plumbing code and Clause J8 of BCA 2022.

Mechanical Services Design Certification:

- 70. An air-handling system that does not form part of a smoke hazard management system will be installed in accordance with Clause E2D3 of BCA 2022, and AS 1668.1:2015.
- 71. Where not naturally ventilated the building will be mechanically ventilated in accordance with Clause F4.5 of BCA 2022 and AS 1668.2:2012.
- 72. Every storey of the car park will be ventilated in accordance with Clause F6d11 of BCA 2022 and where not naturally ventilated it will be mechanically ventilated in accordance with AS 1668.2:2012 as applicable.
- 73. Exhaust systems installed in a kitchen, bathroom, sanitary compartment or laundry of a Class 2 or 4 sole-occupancy unit will have a minimum flow rate and discharge location in accordance with Clause F8D4 of BCA 2022.
- 74. Where exhaust discharges directly or via shaft into a roof space of a Class 2 or 4 sole-occupancy unit, ventilation of the roof space will comply with Clause F8D5 of BCA 2022.
- 75. The air-conditioning and ventilation systems will be designed and installed in accordance with Part J6 of BCA 2022.
- 76. Rigid and flexible ductwork will comply with the fire hazard properties set out in AS 4254 Parts 1 and 2.

Structural Engineers Design Certification:

- 77. The material and forms of construction for the proposed works will be in accordance with Clause B1D3 B1D5 and B1D6 of BCA 2022 as follows:
 - a. Dead and Live Loads AS/NZS 1170.1:2002

- b. Wind Loads AS/NZS 1170.2:2011
- c. Earthquake actions AS 1170.4:2007
- d. Masonry AS 3700:2018
- e. Concrete Construction AS 3600:2018
- f. Steel Construction AS 4100:1998
- g. Aluminium Construction AS/NZS 1664.1 or 2:1997
- h. Timber Construction AS 1720.1:2010
- i. ABCB Standard for Construction of Buildings in Flood Hazard Areas.
- 78. The FRL's of building elements for the proposed works have been designed in accordance with Table 3 of Specification 5 of BCA 2022 for a building of Type A Construction.
- 79. The lift shaft will have an FRL in accordance with Clause C3D11 and Specification 5 of BCA 2022.
- 80. Lightweight construction used to achieve required fire resistance levels will comply with Specification 6 of BCA 2022.
- 81. The construction joints to the structure will be in accordance with Clause C4D16 of BCA 2022 to reinstate the FRL of the element concerned.

Lift Services Design Certification:

- 82. Warning signage in accordance with Clause E3D4 of BCA 2022 will be provided to the lifts to advise not to use the lifts in a fire.
- 83. Access and egress to the lift well landings will comply with the Deemed-to-Satisfy Provisions of D4 of the BCA 2022 and will be suitable to accommodate disabled persons.
- 84. The type of lifts will also be suitable to accommodate persons with a disability in accordance with Clause E3D7 will have accessible features in accordance with BCA 2022.
- 85. The lifts will comply with AS 1735.12:1999 in accordance with Clause E3D7 of BCA 2022.

Acoustic Services Design Certification:

86. The sound transmission and insulation of the residential portions of the development will comply with Part F7 of BCA 2022.

NSW Specification Design Certificate:

87.The swimming pool associated with the new building will comply with Clause G1D2 and NSW G1D2 of the BCA, Swimming Pools Act 1992, Swimming Pools Regulation 2018 and AS 1926.1:2012. AS 1926.2:2007 and AS 1926.3:2010.
