WASTE MANAGEMENT PLAN

**Stable & Arena - Construction
79 Kumarna Street
DUFFYS FOREST NSW 2084**

The majority of the stable structure and arena roof structure components are prefabricated off site in a workshop environment and shipped to site to be assembled minimising the amount of waste material generated on site.

As a guide the average amount of waste generated would be contained within a 3 cubic meter waste bin.

The waste material would consist of mostly of

- off cut metal roof sheet
- off cut colorbond flashings
- Plastic protection film from colorbond flashings
- Sikaflex – empty foil sausage containers
- Masking tape - used
- General waste from sweeping floor and roof sheet swarf
- Packaging material

As the amount of waste generated will be relatively small an option that we could consider would be to use a company such as ANY RUBBISH which services construction sites and offers an eco friendly collection and recycling service.
