introduction

notes

The following document constitutes the Development Application for the property 6 Mitchell Road, Palm Beach NSW.

A site with numerous challenges: a steep cliff, existing overhead driveway and a connection to the existing recreation reserve - 'The Bible Garden'.

Prior to any design sketches being undertaken an extensive site analysis was undertaken with the assistance of Geo-technical Engineers, Structural and Civil Engineers and Builders to determine both the restrictions and opportunities.

Heritage Consultants, Arborists and Ecologists were also requested to prepare preliminary reports to ascertain further restraints as well as opportunities.

In addition, discussions were undertaken with the Friends of the Bible Garden. Preliminary thoughts were reviewed and height poles were installed in order to confirm the best way forward with the programme.

Finally and due to the historical complexity of the site, two Pre-DA meetings were undertaken with Council, firstly to review preliminary Concept Designs and secondly to address the zoning issues of the site.

It therefore follows that this application is structured to reflect this process and includes:

- Site Analysis
- Bible Garden Analysis
- Demolition + Excavation (Site Preparation) Analysis
- Proposed Design + Finishes
- Evaluation

From early discussions with the owner as well as the consultant team, the existing rock face was seen as an enormous asset affording a strong 'back' to the dwelling and an intimacy of views. The rock face also provides unique landscape opportunities.

To unlock the opportunities of the site great care will be required in undertaking the demolition and excavation not only to retain existing built structures of the elevated driveway, but to also reveal the rock face whilst also protecting the existing rockfaces and caves.

The construction programme, including site management, has also been identified as being integral to the design concept. From meetings with the Geo-technical Engineer and Structural Engineer it was sought to reduce the extent and amount of rock excavation on the site and to locate this work as far as possible from the Bible Garden.

It was further understood that any proposed new dwelling must be achieved with a very tight footprint - a narrow pavilion which would look both to the north and the views, but also to the south and embrace the cliff as a visual feature of the new dwelling.

The proposed dwelling is configured as two items;

- The Pavilion, and
- The Circulation Link.

The hub of the Circulation Link is defined by the Lift, Stairs and a set of Foyers at each Level.

The Pavilion is defined as a set of Verandahs and Decks.

It has been a challenging programme of integration and simplification.

Dr. Stephen Lesiuk

background

The subdivision of the site and the Bible Garden included a schematic design illustrating a proposed dwelling including Garage, Lift and Stairs.

ISSUES

- The schematic section and perspective give the impression that the Bible Garden will take benefit of a 'Landscape Structure' to be constructed over the roof of the Garage,
- From detailed Surveys, it was identified that the existing terrace to the Bible Garden (RL 76.300) was 1800mm HIGHER than the height limit identified in the Covenant (RL 74.500)
- This was confirmed with the Trustees of the Bible Garden.
- It was also noted that the proposed position of the Lift and Stairs would require a significant excavation - nearly 14 meters.
- It was obvious that an alternative approach to the vertical circulation to the property was essential

notes

- At the time of the sub-division a Design Concept for a proposed new dwelling was also illustrated.
- The area immediately below the Bible Garden was identified as a car parking space, entry and circulation which included a 'foyer', 'stairs' and a 'lift'.
- This area subject to a Covenant which limits the height of any proposed structure to a maximum of RL 74.500.
- In order to achieve this outcome, extensive excavation would be required right up to the boundary with the Bible Garden.
- The position of this vertical circulation was discussed and reviewed by the Geotechnical Engineer, Structural Engineer, Builder, Ecologist and Arborist.
- Such an approach will require significant and substantial excavation immediately adjacent to the Bible Garden.

6 Mitchell Road, Palm Beach NSW NSW
for
Roger Bain

site access and circulation - option 1

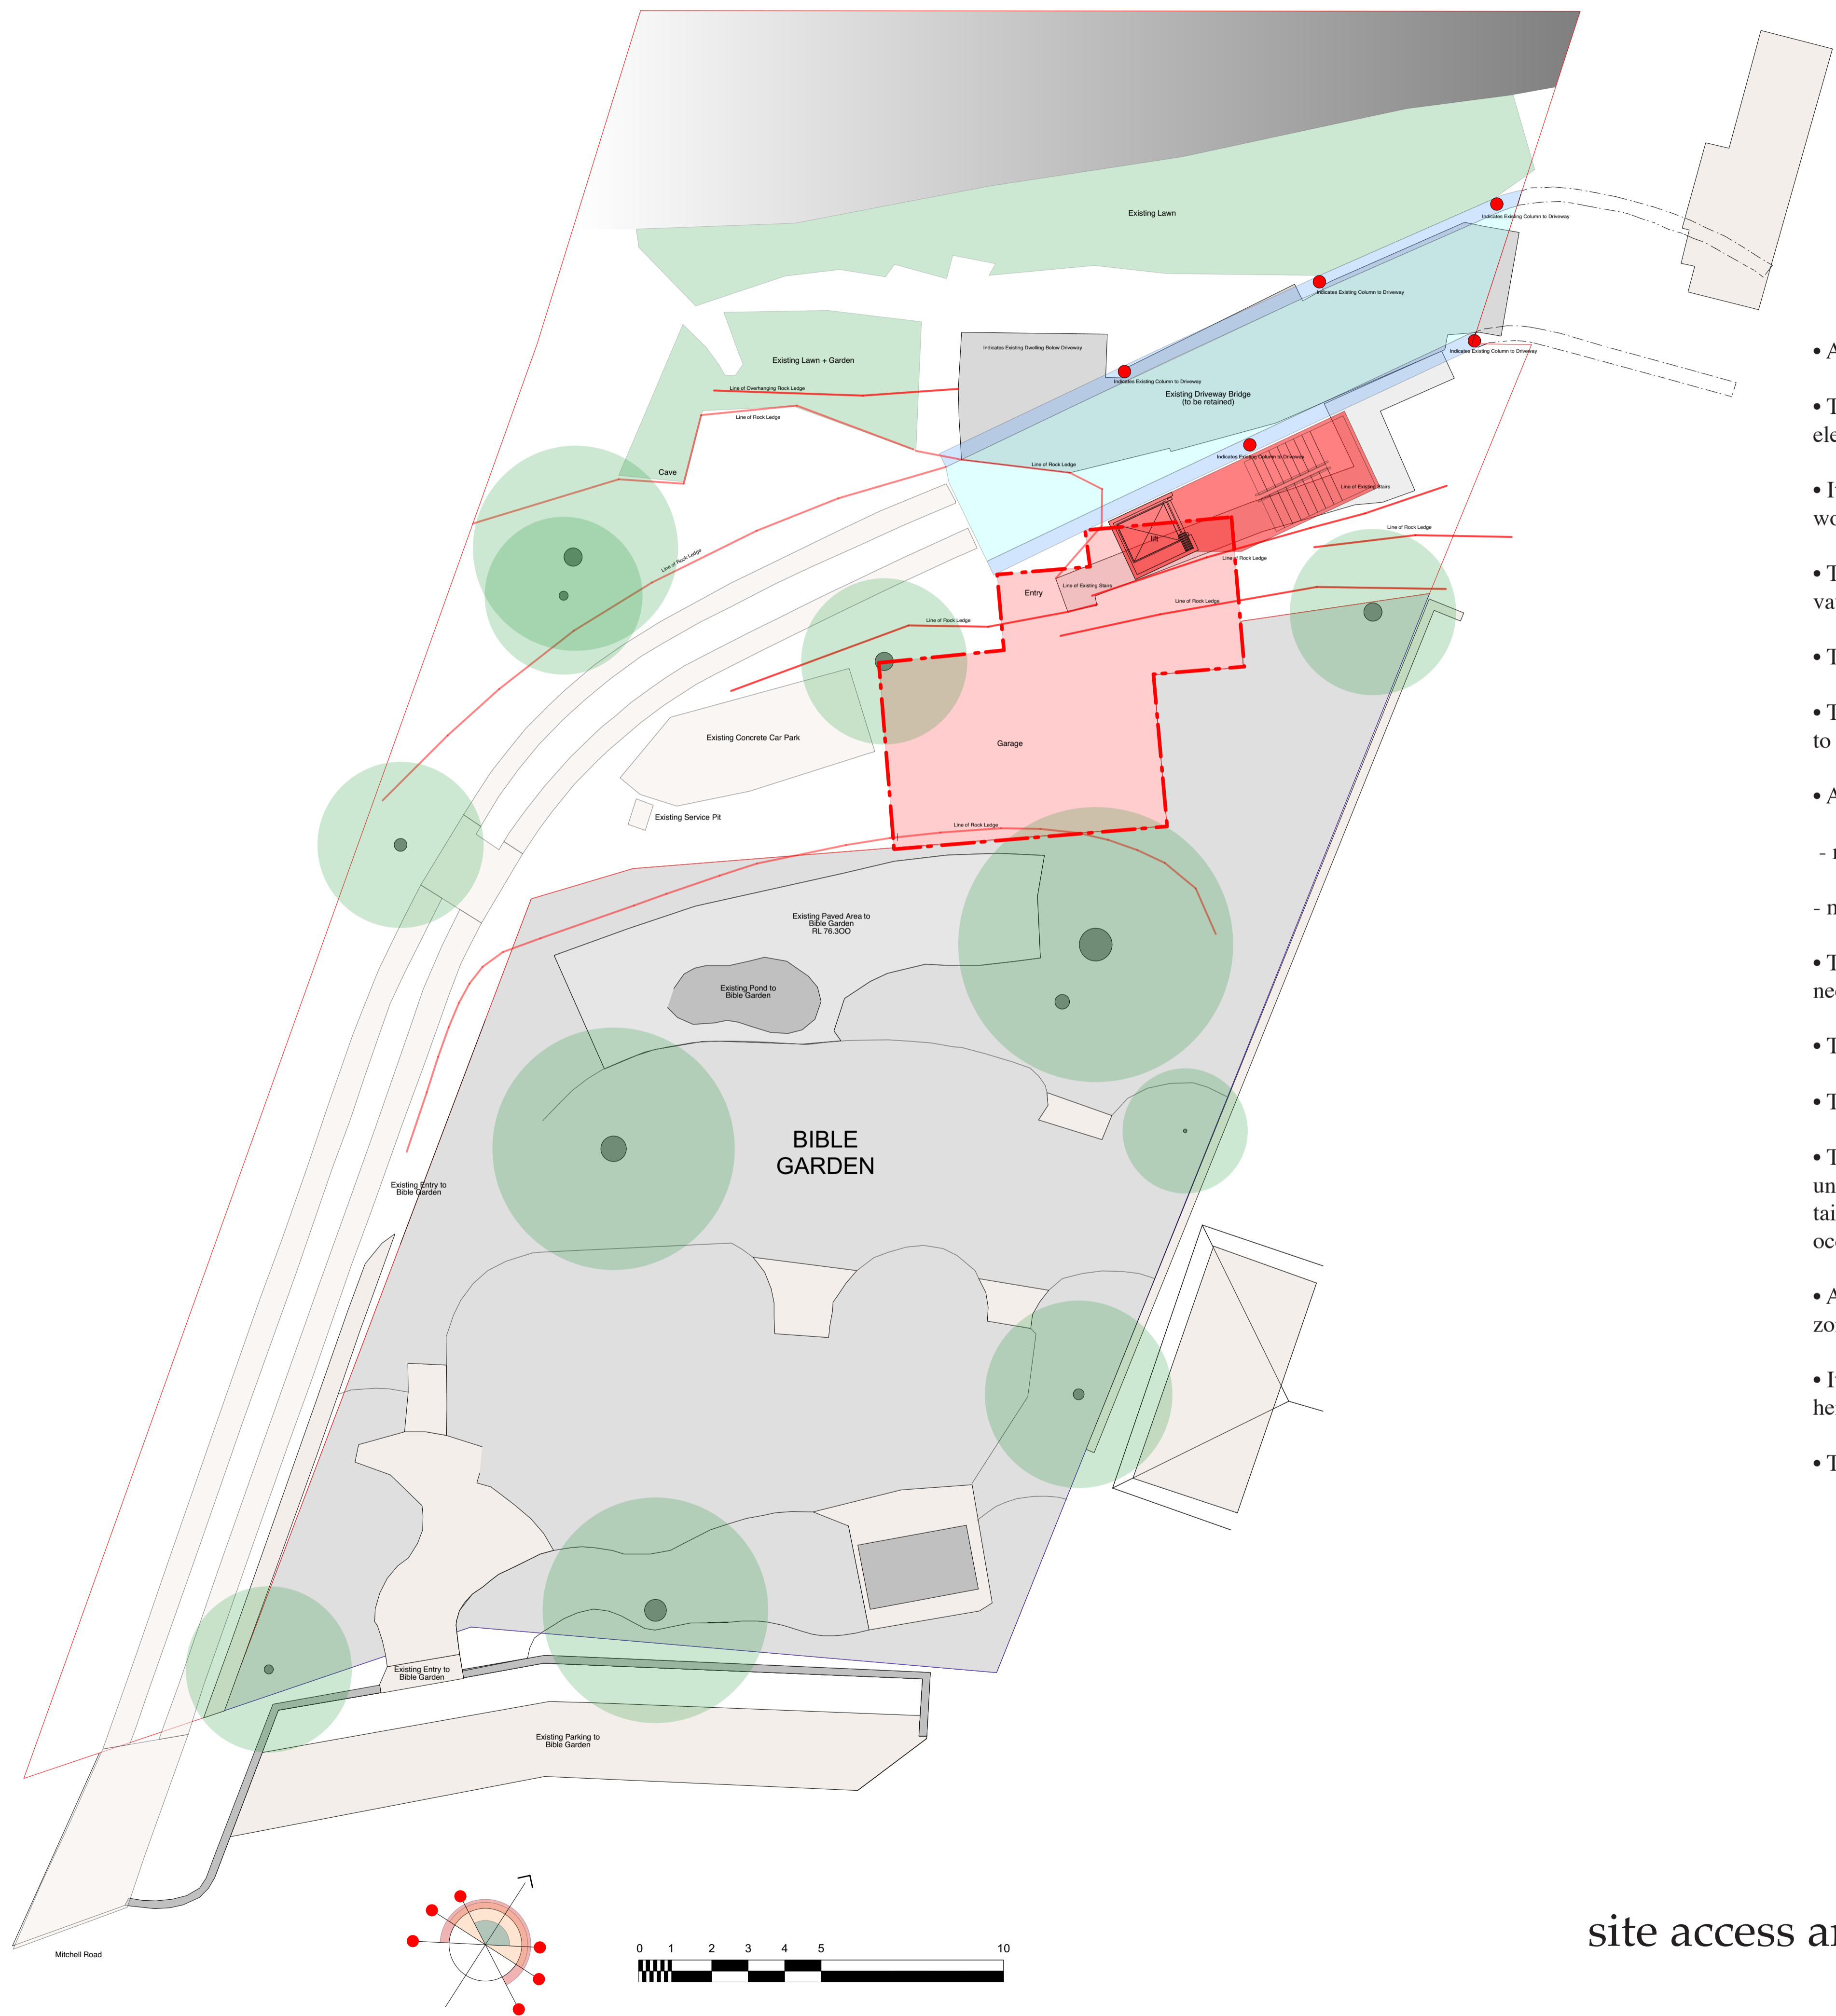

stephen lesiuk

tel: 0414 468 186
email stephenlesiuk@mac.com

notes

- An alternative approach was reviewed with Consultants.
- The existing stairs (vertical circulation) runs along the edge of the existing elevated driveway and a series of rock faces to the existing cliff.
- It was determined that the vertical circulation to the proposed dwelling would be better located in this 'wedge' between the driveway and the cliff.
- This location would significantly reduce the necessity for bulk stone excavation.
- This location is distant to the boundaries to the Bible Garden
- This location would afford the opportunity for natural light and ventilation to the vertical circulation
- AIMS
 - minimise rock excavation
 - minimise impact to the Bible Garden
- This Concept was reviewed by the Geotechnical Engineer, Structural Engineer + Builder
- This Concept was reviewed by the Ecologist + Arborist
- This Concept was reviewed by the Thermal Comfort Consultant
- The Concept was finally reviewed by the Friends of the Bible Garden who understood and appreciated that this excavation (for the lift) would be maintained at a distance to the Bible Garden and that the proposed stairs would occupy a position consistent with the existing stairs on the site.
- A landscaped roof structure was identified as a finish to this circulation zone.
- It was finally noted that this circulation area would result in a lowered roof height of approx. 900mm below RL 74.500.
- The Friends of the Bible Garden saw benefit in this strategy.

A 008 Sectional Analysis
 Scale 1 : 100 @ A1
 July 2020

Stephen Lesiuk
 email stephenlesiuk@mac.com
 phone : 0414 468 186

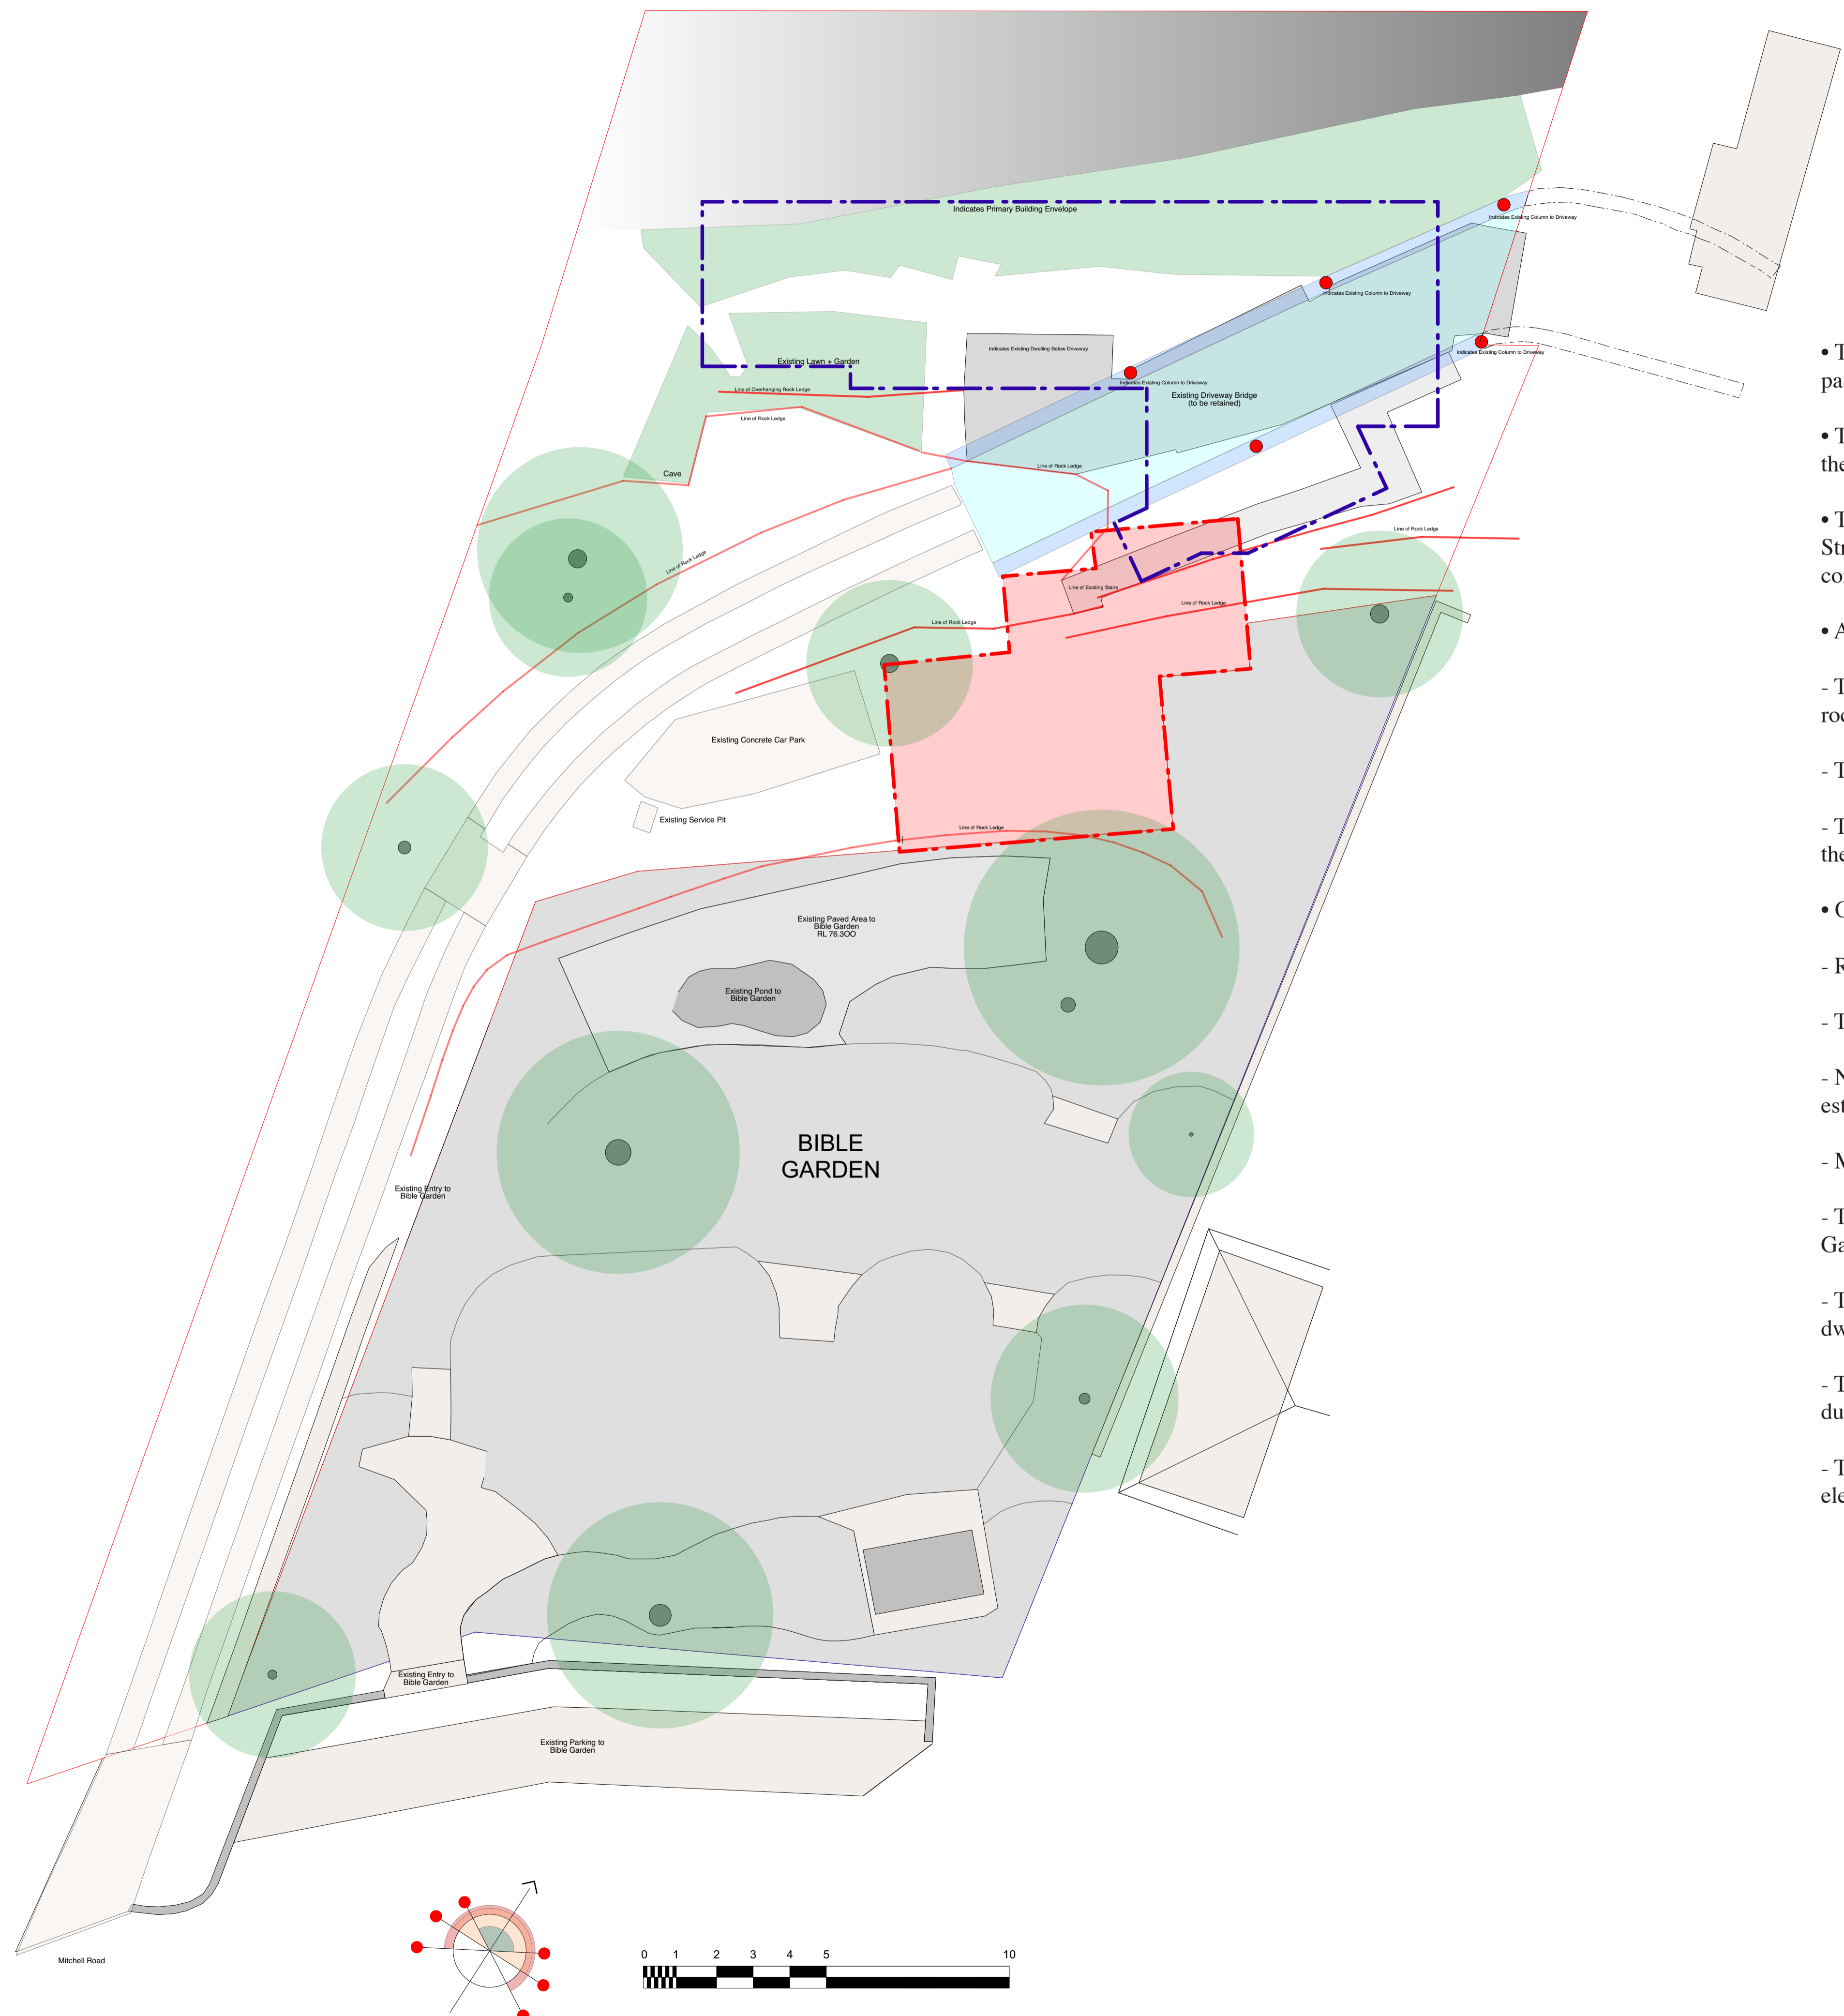

sectional analysis

notes

- The major portion of the proposed new dwelling is configured as a narrow pavilion like structure which is totally below the existing Elevated Driveway.
- The pavilion is narrow - some 4.500m in width and is set well clear of both the Eastern + Western Boundaries.
- The narrow width was discussed with consultants, (Geotechnical Engineer, Structural Engineer, Builder, Ecologist, Arborist and Thermal Performance consultant.
- AIM:
 - To locate the main pavilion clear of the rockface of the cliff and associated rock caves.
 - The new dwelling would take benefit of the expansive views to the North
 - The new dwelling would look out onto the cliff - it would become a part of the landscape of the dwelling.
- Outcome
 - Reduce bulk stone excavation to the new dwelling
 - There would be no negative impact to the property below (on Florida Road)
 - No impact on views to adjact properties (the dwelling is lower than the low-est point of the driveway)
 - Maintain Existing Rock Caves + Rockfaces
 - The site planning principles were discussed with the Friends of the Bible Garden.
 - They again appreciated the narrow pavilion characted of the proposed dwelling
 - They appreciated that the proposed new pavilion was located such as to reduce impact to the existing stone cliff.
 - They appreciated that the proposed structure was well below the existing elevated driveway and would not impact on views from the Bible Garden.

background

The subdivision of the site and the Bible Garden included a schematic design illustrating a proposed dwelling including Garage, Lift and Stairs together with a 'landscape extension' of the Bible Garden over the roof of the proposed car parking structure.

ISSUES

- The schematic section and perspective give the impression that the Bible Garden will take benefit of a 'Landscape Structure' to be constructed over the roof of the Garage,
- From detailed Surveys, it was identified that the existing terrace to the Bible Garden (RL 76.300) was 1800mm HIGHER than the height limit identified in the Covenant (RL 74.500)
- This was confirmed with the Trustees of the Bible Garden.
- It was also noted that the proposed position of the Lift and Stairs would require a significant excavation - nearly 14 meters.
- It was obvious that an alternative approach to the vertical circulation to the property was essential

notes

NOTE:

After discussions and a detailed review by the Friends of the Bible Garden it was agreed that the proposed design for a new dwelling on the lower site should follow the principles identified in Option 3 with NO direct connection from the Bible Garden Terrace to the Landscaped Roof over the Garage and Entry.

Refer Letter from the Friends of the Bible Garden.

email stephenlesiuk@mac.com

part 3 ~ site preparation + construction analysis

In order to 'unlock' the site for the purposes of constructing a new dwelling it was necessary to review the site with Geotechnical Engineers, Structural Engineers, Civil Engineers and Builders together with the Ecologist and Arborist to ensure that there would be minimal damage to the existing natural features of the site, and in particular the existing cliff rockface and associated cave structures.

The following section identifies;

- Sediment and Erosion Controls,
- Demolition Sequence and Strategy
- Geotechnical Stabilization
- Construction Management

In addition, please refer Geotechnical Report.

email stephenlesiuk@mac.com

notes

- Prior to any demolition or excavation a series of Sediment and Erosion Control measures are to be undertaken with drainage from these fences as noted.
- It has been agreed with the Friends of the Bible Garden that a Site Fence which is 'open' will be erected in the Bible Garden during the Construction Phase.
- The existing elevated Driveway is to remain accessible during the Construction Phase.
- No Trucks, Concrete Pumps, etc. will be permitted on the site.

Mitchell Road

notes

- Prior to any demolition or excavation on site, detailed Delapidation Reports will be undertaken;
- immediate neighbouring dwellings including the site below on Florida Road,
- The existing Elevated Driveway
- The Bible Garden Infrastructure
- Other as may be nominated by Council.
- Prior to any Demolition or excavation, the Geotechnical Engineer and Structural Engineer will provide detailed requirements for the stabilization of the existing rockface and cave.
- Demolition of the existing dwelling is to be undertaken by hand to reveal ALL the existing concrete columns supporting the elevated driveway.
- The footings and foundations of these concrete columns are to be inspected by the Geotechnical Engineer _ Structural Engineer
- Prior to any Bulk Excavation and further detailed excavation for the footing and foundations of the proposed dwelling, the Geotechnical and Structural Engineer are to be in attendance.

	HV	<i>Hardenbergia violacea</i>	Native Sasparilla	spilling over		n/a		200mm pot	• refer drawing + site instructions	• please advise cultivar

NOTE • None of these vines have suckers or tendrils
• The native grape will require wires or similar

NOTE • For native grasses, tubstock can be substituted
• Mulch must only contain organic decomposing material
• Soil must be a minimum of 20% spent mushroom compost by way of volume and sand loam material
• Sub-soil must be prepared prior to placement of soil
• Sub-soil is to be broken up to a min. of 300mm and treated with a chemical 'clay-breaker'
• ph tests to be conducted prior to placement of soil to ensure building chemicals are neutralised - ph NEUTRAL
• ALL soil to be watered prior to placement of plants to ensure against 'soil drop'
• Prior to planting, ALL planting areas are to be treated with organic fertilizers, eg 'blood + bone' watered in
• Lawn areas are to be constructed over friable soil and sub-strate
• Exterior lighting is to be positioned after planting - all cables are to be dug in
• All irrigation is to be dug in after planting

NOTE:

- Generally make good paving and planting along the Northern Bdy. of the Bible Garden.
- Re-instate and extend existing balustrade to Northern Bdy. of the Bible Garden
- Clean + make good
- Refer Arborist Report for Tree Protection requirements

Soil Strata Preparation to Roof Gardens

- Concrete roof slabs to be set with falls to sumps
- Provide 50mm copper overflow pipes to parapet walls
- Approved waterproof membrane to be installed
- Provide protection boards over membrane
- Atlantis Drain Cell over protection boards
- Geofabric filter layer over Atlantis Drain Cell
- 100mm Gravel drainage layer
- 300mm Sandy Loam Soil
- Black Forest Mulch (install after planting)
- Install sanstone 'Bush Rocks' as directed
- Drip Irrigation to be installed after planting

- Clean back existing rock face of weeds taking care to protect soil pockets
- Prepare for planting

- Install 'peat moss' into crevaces of rubble sandstone wall
- Irrigation feed lines to be installed in rubble sandstone wall

- Install 'peat moss' into crevaces of rubble sandstone wall
- Irrigation feed lines to be installed in rubble sandstone wall

- Prepare planting areas to base of sandstone rubble retaining wall

- Sandstone flagging + stairs to entry of Bible Garden
