RE: DA2018/1667 - 181 Allambie Road ALLAMBIE HEIGHTS NSW 2100

The environmental impact of this proposal is of too significant a scale to be appropriate. The level of clearing required for the APZ will significantly adversely affect threatened species habitat. Further, the impact of construction and use on surrounding waterways is inappropriate. The unique habitats of the Manly Dam area have already been encroached upon significantly in recent years. We should protect what little there is left of this special place.
