**RE: DA2021/1612 - 1 Clarke Street NARRABEEN NSW 2101**

The design of the Seawall was not well thought of it seems. ESD and sustainability reports if undertaken prior to the construction should have been made public especially to the community as well as the design. During design development from initiation , there was no community consultations bring the community is on of the stakeholders. This is all so wrong in many levels. From environmental, social, social -economic and public assets are not enhanced, optimised but compromised.

This should be stopped now until the community, the stakeholders that is the general public, taxpayers get on board with a design that is sustainable, not harmful to environment and that is socially encouraging.
