RE: REV2021/0006 - 181 Allambie Road ALLAMBIE HEIGHTS NSW 2100

This asset protection Zone must be preserved, and no development should occur that is likely to affect the local habitat.

We have seen what can happen very quickly with a bush fire so any changes to the environment that can affect the fire protection Zones must be considered very carefully and understand the consequences should there be any future fire issues.

This development land also removes many mature trees and habitat for protected fauna.

This Construction will have downstream implications for the freshwater of Manly Dam and the Galaxias fish, via Curl Curl Creek (Category A Creek) -

Apparently, this is the ONLY remaining population of Galaxias in Manly Dam following a 2020 study by scientist Sonya Ku.

Riparian land needs to be protected and restored NOT destroyed.

Crown Land is designated for the community and not development .

The wider community will be deprived of access to this area for public enjoyment.

Who knows what this development will have on the future of this parcel of land ?
