1. INTRODUCTION

1.1 Preamble

This Amended Statement of Environmental Effects (SEE) has been prepared to accompany a Development Application (DA) to Northern Beaches Council for the demolition of the existing dwelling house and construction of a boarding house at No. 16 Wyatt Avenue, Belrose.

The subject site is located on the north-western side of Wyatt Avenue, approximately 380 metres to the south-west of Forest Way. The site encompasses an area of approximately 9,342m², and is irregular in shape with a frontage of 28.745 metres to Wyatt Avenue.

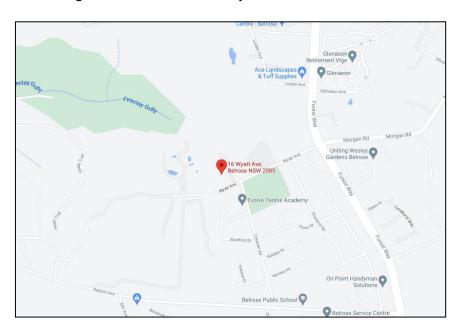

Figure 1: Location

The site is currently occupied by a 2-storey dwelling house setback approximately 35 metres from Wyatt Avenue. Off-street car parking is located within an attached garage located in front of the dwelling, setback approximately 29 metres from Wyatt Avenue. The site is accessed via a combined entry/exit driveway located along the Wyatt Avenue frontage.

A swimming pool is located to the rear of the dwelling, and a series of outbuildings occupy the rear (north-western) portion of the site. Further, the site accommodates an informal helipad that is used on a relatively frequent basis.

The proposed development comprises the demolition of the existing structures, and the construction of a boarding house. The proposed boarding house accommodates 55 boarding rooms, including a manager's room.

Off-street parking is proposed for 34 vehicles, 13 motorcycles, and 55 bicycles. Vehicular access to the front building is proposed via a combined entry/exit driveway located along the Wyatt Avenue frontage of the site. Vehicular access to the rear building is proposed via an extension of the access driveway servicing the approved boarding house to the east (No. 14 Wyatt Avenue).

The site is located in the *Belrose North Locality* pursuant to the Warringah Local Environmental Plan (LEP) 2000, and "boarding houses" are permissible in the Locality with the consent of Council.

The Northern Beaches Local Government Area (LGA) is statistically one (1) of the most expensive LGA's in New South Wales (NSW). In that regard, the Northern Beaches *Local Strategic Planning Statement* (LSPS) (March 2020) notes that:

There is limited supply of social housing and affordable rental housing on the Northern Beaches.

The lack of affordable housing is pronounced for households on lower incomes, driving the demand for social housing and affordable rental housing.

Providing more diverse and affordable rental and social housing options will help very low to moderate income households, including key workers, such as police and health care workers, stay in the area. It will mean people of all incomes and backgrounds can participate in the community.

The proposed development has been carefully designed to provide a good level of amenity for future residents, without imposing any significant or unreasonable impacts on the amenity of surrounding land.

Further, the proposed development has been designed to respect the environmental characteristics of the site, with the building form designed to negotiate the topographical fall of the site towards the rear (northwest), and maintain and enhance the overall landscaped setting of the site and surrounds.

Finally, the overall bulk and scale of the proposed development has been moderated by separating the built form into two (2) separate buildings, with both the upper and lower buildings adopting a series of interconnected modules to further reduce the perceived bulk and scale of the individual buildings.

1.2 Background

The Warringah Local Environmental Plan (LEP) 2011 was gazetted on 9 December 2011. The site (amongst other areas) is identified as a "deferred matter" and is not subject to the provisions of the Warringah LEP 2011.

The Warringah LEP 2000 adopts "Local Statements" for individual areas, and does not prescribe land use zones. Accordingly, the provisions of State Environmental Planning Policy (SEPP) (Affordable Rental Housing) 2009 do not specifically apply to the proposed development.

Irrespective, the provisions of the SEPP have been considered where there is an absence of relevant controls relating to boarding houses in the LEP.

On 20 January 2021, the Land and Environment Court upheld an appeal (*Platform Architects Pty v Northern Beaches Council [2020] NSWLEC 185*) in relation to the refusal of a DA for a boarding house on the adjoining property to the south-east, identified as No. 14 Wyatt Avenue, Belrose.

The approved boarding house accommodates 25 boarding rooms, including a manager's room. Off-street car parking was approved for 13 vehicles, eight (8) motorcycles and bicycle storage. Vehicular access was approved via a combed entry/exit driveway extending to/from the Wyatt Avenue frontage of the site.

The approved building adopts a series of interconnected modules to negotiate the topographical fall of the site towards the rear (north-west), and reduce the overall bulk and scale of the built form.

In that regard, the proposed development has adopted a number of the overarching design principles incorporated in the approval of the boarding house on the adjoining property to the south-east.

In particular, the upper building adopts a similar footprint as the approved boarding house, with substantially the same setbacks to the front and side boundaries. The lower (north-western) building has been designed to achieve full compliance with the side and rear boundary setback controls.

Further, the proposed development adopts a similar privacy treatment along the south-western boundary, with off-set blade walls maintaining the privacy of the surrounding land to the south-west.

The buildings adopt a similar architectural composition, incorporating vertical and horizontal articulation, a refined palette of external materials and finishes, and stepped form to negotiate the topographical fall of the site towards the rear (north-west).

Finally, the proposed development adopts a similar landscaped treatment for the site, including the retention of the majority of the existing trees, with the retained trees supplemented by a hierarchy of new trees, shrubs and groundcovers.

1.3 Purpose

This SEE has been prepared pursuant to the provisions of the *Environmental Planning and Assessment Act 1979* and accompanying *Regulation*. To that end, it:

- identifies the site and provides details of its locational context;
- describes the physical characteristics and operational of the proposed development;
- identifies the environmental planning instruments and policies that apply to the site and considers the proposed development against those that are relevant; and
- provides an assessment of the proposed development against the provisions of Section 4.15 of the *Environmental Planning and Assessment Act 1979*.

2. SITE DESCRIPTION

2.1 Site Details

The site formally comprises Lot 2566 in Deposited Plan 752038, and is commonly known as No. 16 Wyatt Avenue, Belrose.

The subject site is located on the north-western side of Wyatt Avenue, approximately 380 metres to the south-west of Forest Way. The site encompasses an area of approximately 9,342m², and is irregular in shape with a frontage of 28.745 metres to Wyatt Avenue.

The site is currently occupied by a 2-storey dwelling house setback approximately 35 metres from Wyatt Avenue. Off-street car parking is located within an attached garage located in front of the dwelling, setback approximately 29 metres from Wyatt Avenue. The site is accessed via a combined entry/exit driveway located along the Wyatt Avenue frontage.

A swimming pool is located to the rear of the dwelling, and a series of outbuildings occupy the rear (north-western) portion of the site. Further, the site accommodates an informal helipad that is used on a relatively frequent basis.

Photograph 1: Subject Site Viewed from Wyatt Avenue

The topography of the site typically falls downhill from the south-east to the north-west, with a total level change of approximately 29 metres.

The existing vegetation on the site comprises a scattering of trees, shrubs and groundcovers. The existing trees are primarily located to the rear of the existing dwelling, and in the north-eastern corner of the site.

2.2 Site Context

The site is located within a mixed-use precinct characterised by a mix of detached dwellings, townhouses, a boarding house, educational facilities, and specialist landscape supply/nurseries.

The site is well located with respect to access to services and facilities. In that regard, the site is located approximately 40 metres walking distance of a bus stop on Cotentin Road, within 200 metres walking distance to the nearest bus stop on Wyatt Avenue, and within 400 metres of the bus stops located on Forest Way.

Accordingly, the site has convenient access to shopping facilities at Warringah Mall, Forest Way, Ralston Avenue, and Glenrose Shopping Centre, employment opportunities at the new Northern Beaches Hospital, Glenaeon Retirement Village, Wesley Gardens Retirement Village, Belrose Country Club Retirement Village, Austlink Business Park, Belrose, Dee Why and Brookvale, and to a range of educational facilities at Belrose and Brookvale TAFE, and to multiple recreational facilities.

Figure 2: Site Context

On 20 January 2021, the Land and Environment Court upheld an appeal (*Platform Architects Pty v Northern Beaches Council [2020] NSWLEC 185*) in relation to the refusal of a DA for a boarding house on the adjoining property to the south-east, identified as No. 14 Wyatt Avenue, Belrose.

The approved boarding house accommodates 25 boarding rooms, including a manager's room. Off-street car parking was approved for 13 vehicles, 8 motorcycles and bicycle storage. Vehicular access was approved via a combed entry/exit driveway extending to/from the Wyatt Avenue frontage of the site.

Figure 3: Approved Boarding House to the East

On 17 March 2020, Council granted Development Consent (DA 2019/0238) for the construction of a child care centre and caretakers residence at No's 10 - 12 Wyatt Avenue, Belrose.

The approved child care centre is intended to provide long day care for up to 60 children between 7.00am and 6.30pm, Monday to Friday. Offstreet car parking was approved for 16 vehicles, accessed via a combined entry/exit driveway located along the Wyatt Avenue frontage.

The approved building is 1-2 storeys in height, setback 20 metres from Wyatt Avenue, with the off-street car parking facilities located between the approved building and the front boundary.

The site is adjoined to the south-west by a single storey dwelling house setback approximately 20 metres from Wyatt Avenue. The dwelling includes a centralised swimming pool and off-street car parking facilities, accessed via a combined entry/exit driveway extending to/from the Wyatt Avenue frontage.

Photograph 2: Adjoining Property to the West

The surrounding development to the north-east comprises heavily vegetated bushland, and the surrounding development to the southwest (on the opposite side of Wyatt Avenue) comprises a series of 1-2 storey detached dwelling houses, typically on allotments with an area of approximately $680 \, \mathrm{m}^2$.

3. PROPOSED DEVELOPMENT

3.1 General Description

The proposed development is illustrated in the Amended Architectural Plans prepared by *Platform Architects*, dated 16 June 2022.

The proposed development comprises the demolition of the existing structures, and the construction of a boarding house. The proposed boarding house accommodates 55 boarding rooms, including a manager's room.

Off-street parking is proposed for 34 vehicles, 13 motorcycles, and 55 bicycles. Vehicular access to the front building is proposed via a combined entry/exit driveway located along the Wyatt Avenue frontage of the site. Vehicular access to the rear building is proposed via an extension of the access driveway servicing the approved boarding house to the east (No. 14 Wyatt Avenue).

Building Form

The proposed development has been separated into an upper (south-eastern) and lower (north-western) building, intended to negotiate the topographical fall of the site towards the rear (north-west), and reduce the overall bulk and scale of the built form.

The upper building accommodates 23 boarding rooms, including the manager's room (with a private courtyard). The individual rooms include ensuites, and no kitchens or laundries are provided within the individual rooms.

The upper building includes common laundry, drying and storage facilities, and two (2) common rooms with kitchens, including a common room with access to a north-west facing terrace.

Off-street parking is provided for 11 vehicles (including 2 accessible spaces), 5 motorcycles and 23 bicycles. The off-street parking facilities are located within a partially excavated basement level, accessed via a combined entry/exit driveway extending to/from Wyatt Avenue.

The upper building is separated into three (3) interconnected modules to negotiate the topographical fall of the site towards the rear (north-west).

The lower building accommodates 32 boarding rooms. The individual rooms include ensuites, and no kitchens or laundries are provided within the individual rooms.

The lower building includes common laundry, drying and storage facilities, and four (4) common rooms with kitchens, including two (2) with access to a north facing terraces.

Off-street parking is provided for 19 vehicles (including 2 accessible spaces), four (4) visitor spaces, 8 motorcycles and 32 bicycles. The off-street parking facilities are located within a partially excavated basement level, accessed via an extension of the access driveway servicing the approved boarding house to the east (No. 14 Wyatt Avenue).

The lower building is separated into three (3) interconnected modules to negotiate the topographical fall of the site towards the rear (north).

Landscaping

The existing vegetation on the site comprises a scattering of trees, shrubs and groundcovers. The DA is accompanied by an *Arboricultural Impact Assessment* which provides an assessment of 47 trees.

The Assessment includes recommended protection measures to ensure the retention of 31 existing trees as part of the proposed development. Further, six (6) of the trees being removed are exempt species, and four (4) trees are eligible for removal on the basis of the current 10/50 bushfire clearing entitlements.

The DA is accompanied by a *Landscape Plan* which describes the proposed landscaped treatment of the site. In that regard, the proposed development provides a hierarchy of new trees, shrubs and groundcovers, intended to maintain and enhance the overall landscaped setting of the site and surrounds.

Materials and Finishes

The schedule of external materials and finishes includes a combination of fibre cement cladding, face brickwork, corrugated metal cladding, timber or painted FC sheets, fibre cement fascias, and natural stone cladding.

The Project Architects have described the intention of the proposed colour palette as follows:

The palette of the development is based on colours of the neighbourhood – mostly houses with neutral ochre to brown tones. This is complemented with neutral colours of the surrounding natural bushland. These colours are used in a way to optically reduce the bulk of the building and to underline the separation into modules.

3.2 Operational Details

A Plan of Management (POM) has been prepared to regulate the operation of the proposed boarding house. The POM generally aims to ensure there are no adverse impacts arising from the facility on any adjoining property or the neighbourhood, to provide procedures to receive and resolve complaints, maintain the internal and external amenity of the building, and ensure residents enjoy their stay in a safe environment.

The facility will be managed by an experienced operator who will oversee the day-to-day operations of the boarding house, including matters such as general maintenance and cleanliness of common areas, observance by residents of house rules, and services.

The proposed boarding house will provide lodgers with a principal place of residence for periods of three (3) months or more. The lodgers will have access to their private rooms, and the communal facilities in accordance with the POM.

4. SECTION 4.15 ASSESSMENT

The heads of consideration incorporated in Section 4.15 of the *Environmental Planning and Assessment Act 1979* comprise:

- any environmental planning instrument;
- any proposed instrument that is or has been the subject of public consultation and that has been notified to the consent authority;
- any development control plan;
- any planning agreement or draft planning agreement;
- any matters prescribed by the Regulation;
- the likely impacts of the development, including environmental impacts on both the natural and built environments, and the social and economic impacts in the locality;
- the suitability of the site for the development;
- any submissions made in accordance with the Act or the Regulations; and
- > the public interest.

4.1 Environmental Planning Instruments

The following environmental planning instruments are of relevance to the proposed development:

- 1. State Environmental Planning Policy (SEPP) (Resilience and Hazards) 2021;
- 2. State Environmental Planning Policy (SEPP) (Affordable Rental Housing) 2009; and
- 3. Warringah Local Environmental Plan (LEP) 2000.

SEPP (Resilience and Hazards) 2021

Clause 4.6 specifies that a consent authority must not consent to the carrying out of development on land unless it has considered whether the land is, or is likely to be contaminated, and if the land is, or is likely to be contaminated, whether the land requires remediation before the land is developed for the proposed use.

The site is currently used for residential purposes, and evidently has not been zoned or used for industrial, agricultural or defense purposes at any times in the lands recent history.

In the circumstances, there is no evidence to suggest that the land is likely to be contaminated to the extent that would render it unsuitable for use as a boarding house.

SEPP (Affordable Rental Housing) 2009

SEPP (Affordable Rental Housing) 2009¹ generally aims to facilitate the effective delivery of new affordable rental housing by providing incentives by way of expanded zoning permissibility, floor space ratio bonuses, and non-discretionary development standards.

The SEPP prevails to the extent of any inconsistency with any other environmental planning instrument, and Division 3 applies to boarding houses.

The Warringah LEP 2000 adopts "Local Statements" for individual areas, and does not prescribe land use zones. Accordingly, the provisions of the SEPP do not specifically apply to the proposed development.

Irrespective, the provisions of the SEPP have been considered in the event of an absence of controls relating to boarding houses in the LEP.

Clause 29 of the SEPP specifies development standards which, if complied with, cannot be used to refuse consent. Further, Clause 30 specifies development standards which must be satisfied. The standards are considered in Table 4.1.1 as follows:

Table 4.1.1 – SEPP	(Affordable Rental Housing) 2009

	The proposed development	
	provides 55 bicycle spaces and 13	
	motorcycle spaces.	

Finally, Clause 30A of the SEPP specifies that the consent authority must not consent to development unless it has taken into consideration whether the design of the development is compatible with the character of the local area.

The Land and Environment Court has established a number of *planning* principles relating to "compatibility" in Project Venture Developments v Pittwater Council [2005] NSWLEC 191.

The fundamental principle established in *Project Venture* is that compatibility means capable of existing together in harmony. As explained in *Project Venture*:

Compatibility is thus different from sameness. It is generally accepted that buildings can exist together in harmony without having the same density, scale or appearance, though as the difference in these attributes increases, harmony is harder to achieve.

To test whether a proposal is compatible with its context, *Project Venture* poses two (2) questions that need to be addressed as follows:

- Are the proposal's physical impacts on surrounding development acceptable? The physical impacts include constraints on the development of surrounding sites.
- Is the proposal's appearance in harmony with the buildings around it and the character of the street?

The proposed development will present to the street as a 2-storey building setback a minimum compliant distance of 20 metres from the front boundary.

Further, the proposed development provides a total landscaped area of approximately 6,001.3m², representing 64.2% of the site area, which significantly exceeds the minimum landscaped area requirement of 50% of the site area within the Locality.

The site is of sufficient size to accommodate the proposed development without imposing any significant or unreasonable impacts on the amenity of surrounding properties in terms of the key considerations of visual bulk, overshadowing, privacy and views.

The shadows cast by the proposed development will substantially fall within the boundaries of the site, with the only exception being a period of approximately 2 hours between 9.00am and 11.00am in mid-winter. In

the circumstances, the surrounding properties will continue to receive good levels of solar access at all times of the year.

The lower (north-western) building complies with the side and rear boundary setback controls, and will not contribute to any significant or proximate overlooking of surrounding properties.

The upper (south-eastern) building substantially complies with the side boundary setback control along the south-eastern boundary, and the south-western façade incorporates off-set blade walls specifically designed to mitigate overlooking towards the south-west.

Finally, the proposed development includes the retention of the majority of the existing trees on the site, with the retained trees supplemented by a hierarchy of new trees, shrubs and groundcovers.

In the circumstances, it is reasonable to conclude that the proposed development will be compatible with the existing and likely future character of the locality, and will not be perceived as offensive, jarring or unsympathetic to the existing and likely future character.

Warringah LEP 2000

Permissibility

The site is located within the C8 – Belrose North Locality pursuant to the Warringah LEP 2000. A "boarding house" is identified as a Category Two use within the Locality, with Category Two uses considered "development that may be consistent with the desired future character of the locality".

The LEP defines a "boarding house" as follows:

boarding house—

- (a) means any premises that—
 - (i) are wholly or partly let as a lodging for the purposes of providing the occupants with a principal place of residence, and
 - (ii) are used and occupied by at least 4 long term unrelated residents, and
 - (iii) include a communal living space used for eating and recreation, and
 - (iv) are not licensed to sell liquor, and

(b) does not include premises that have been subdivided or in which there is separate ownership of parts of the premises.

The proposed boarding house will provide lodgers with a principal place of residence for periods of three (3) months or more. The facility will accommodate more than four (4) long term unrelated residents, and the facility includes multiple communal living spaces capable of being used for eating and recreation.

Further, the proposed facility will not be licensed to sell liquor, and the proposed development does not include subdivision of the premises into separate ownership.

Locality Statement

Clause 12 requires the consent authority to be satisfied that the proposed development is consistent with the desired future character described in the Locality Statement.

The desired future character of the *Belrose North Locality* is expressed as follows:

The present character of the Belrose North locality will remain unchanged except in circumstances specifically addressed as follows.

The natural landscape including landforms and vegetation will be protected and, where possible, enhanced. Buildings will be grouped in areas that will result in the minimum amount of disturbance of vegetation and landforms and buildings which are designed to blend with the colours and textures of the natural landscape will be strongly encouraged.

Development will be limited to new detached style housing conforming with the housing density standards set out below and low intensity, low impact uses.

A dense bushland buffer will be retained or established along Forest Way. Fencing is not to detract from the landscaped vista of the streetscape.

Development in the locality will not create siltation or pollution of Middle Harbour.

The proposed development is consistent with the desired future character of the Locality on the basis that:

- the proposed development will present to the street as a 2-storey building setback a minimum compliant distance of 20 metres from the front boundary;
- the proposed development includes extensive existing and new landscaping within the front setback, contributing to the overall landscaped setting of the building and associated facilities;
- the proposed development provides a total landscaped area of approximately 6,001.3m², representing 64.2% of the site area, which significantly exceeds the minimum landscaped area requirement of 50% of the site area within the Locality;
- the site is of sufficient size to accommodate the proposed development without imposing any significant or unreasonable impacts on the amenity of surrounding properties in terms of the key considerations of visual bulk, overshadowing, privacy and views;
- the proposed development has been separated into an upper (south-eastern) and lower (north-western) building, intended to negotiate the topographical fall of the site towards the rear (north-west), and reduce the overall bulk and scale of the built form;
- the individual separated into interconnected modules to further reduce the bulk and scale and negotiate the topographical fall of the site towards the rear (north-west);
- the palette of external materials and finishes will complement the neutral colours of the surrounding natural bushland, and optically reduce the bulk of the buildings and to reinforce the physical separation into modules; and
- normal precautions will be taken during the demolition and construction of the proposed development to ensure there are no adverse impacts in terms of runoff and water quality.

Intensity and Impact

In Vigor Master Pty Ltd v Warringah Shire Council [2008] NSWLEC 1128 referred to definitions of "intensity" and "impact" as follows:

Intensity - is commonly used to identify the nature of the proposal in terms of its size and scale and the extent of the activities associated with the proposal. Therefore "low intensity" would constitute a development which has a low level of activities associated with it.

Impact - is commonly used in planning assessment to identify the likely future consequences of proposed development in terms of its surroundings and can relate to visual, noise, traffic, vegetation, streetscape privacy, solar access etc. Therefore 'low impact' would constitute a magnitude of impacts such that was minimal, minor or negligible level and unlikely to significantly change the amenity of the locality.

The proposed boarding house provides a form of residential accommodation, which typically represents a low intensity land use relative to other land uses that can be accommodated in the Locality (e.g. child care centres, bulky goods shops, hospitals, hotels, places of worship, primary schools, service stations and shops).

Further, the activity of residents is regulated by the POM, which generally aims to ensure there are no adverse impacts arising from the facility on any adjoining property or the neighbourhood, to provide procedures to receive and resolve complaints, maintain the internal and external amenity of the building, and ensure residents enjoy their stay in a safe environment.

The DA is accompanied by a *Traffic and Parking Impact Assessment* which concludes that the car parking demands will be met on-site, and that the additional vehicular trips generated by the proposed development can be accommodated in the nearby intersections without significantly affecting the performance of any turn movement, approach arm or the overall intersection.

Finally, in *Platform Architects Pty Ltd v Northern Beaches Council [2020] NSWLEC 185*, Duggan J, made the following comments in relation to the intensity and impact of the approved boarding house on the adjoining site to the east:

55. In this case, I accept the evidence of the Town Planning experts that the nature of the propose use is of a residential type, that is, that people will resort to the premises to sleep and recreate.

Whilst the number of unrelated individuals may exceed that of a single family home, the impact is unlikely to cause unacceptable amenity impacts due to the design of the building with the communal areas directed away from the street frontage, the management of external noise by the Plan of Management and the design of the building that limits opportunities for overlooking of adjoining residential premises. Further, the design, building height and landscaping will provide a development that is consistent in its visual impact to development within the C8 Locality and the adjoining R2 residential development.

- 56. I also accept the assessment of traffic impacts undertaken by both the Council and the Applicant that the number of trips associated with the boarding house use will be of low intensity and will be consistent with the current uses in the locality. In this regard, I note that a number of the persons who made submissions that opposed the DA cited existing traffic congestion arising from the school that is in close proximity to the Site. The traffic engineers observed (and I accept) that the users of the boarding house are unlikely to be unreasonably contributing to traffic during these periods and are likely to be heavy users of the public transport facilities available such that the impact of traffic generated by the DA is low in intensity and impact.
- 57. Accordingly, the boarding house use proposed in the DA is properly characterised as a low intensity, low impact use and is, therefore, capable of being consistent with the Desired Future Character Statement of the C8 Locality.

Built Form

The Locality Statement specifies a maximum housing density of 1 dwelling per 20 hectares of site area.

The proposed boarding house rooms do not include kitchen facilities, and the POM expressly prevents food preparation or cooking from the individual rooms.

In the circumstances, the proposed boarding house does not comprise "housing" or a "dwelling", and the housing density standard within the

Locality does not apply (refer to *Platform Architects Pty Ltd v Northern Beaches Council [2020] NSWLEC 185*).

The Locality Statement specifies a maximum building height of 8.5 metres measured to the topmost point of the building, and 7.2 metres measured to the underside of the ceiling of the uppermost floor.

The proposed development complies with the 8.5 metre building height control, however some portions of the ceiling of the uppermost floors extend above the 7.2 metres ceiling height control.

In that regard, the 8.5 metre building height control is the more relevant criteria in relation to the appropriateness of the building height, circumstances in which the partial variations to the ceiling height do not contribute to any external impacts on the amenity of surrounding land.

The Locality Statement specifies a minimum front boundary setback of 20 metres.

The proposed development provides a minimum front boundary setback of 20 metres, excluding the bin storage area occupying the southwestern corner of the site.

In that regard, the bin storage area is similar in size and location as the approved boarding house on the adjoining site to the south-east, and the location is intended to satisfy Council's requirement for bin storage areas to be located close to the street frontage for ease of movement for collection purposes.

The Locality Statement specifies minimum side and rear boundary setback of 10 metres.

The proposed development provides a minimum rear boundary setback of 43.085 metres, and side boundary setbacks of 9.25 - 15.755 metres along the north-eastern boundary, and 6.06 - 33.12 metres along the south-western boundary.

The proposed development complies with the side and rear boundary setback controls over the rear (north-western) portion of the site, and the partial variation over the side boundary control over the front portion of the site primarily relates to the limited site width of 28.745 metres.

In that regard, strict compliance with the side boundary setback controls would generate a long and narrow built form over the front portion of the site, and effectively render that portion of the site impractical to develop in accordance with the remainder of the applicable planning controls.

Finally, the proposed side boundary setbacks are similar to, or greater than, the setbacks of the substantial majority of buildings in the immediate surrounds, including the approved boarding house on the adjoining site to the south-east (No. 14 Wyatt Avenue), the approved child care centre on the property further to the south-east (No's 10 - 12Wyatt Avenue), and the adjoining dwelling house to the south-west (No. 18 Wyatt Avenue).

The Locality Statement specifies that a minimum of 50% of the site area is to be kept as natural bushland or landscaped with local species.

The proposed development provides a total landscaped area of approximately 6,001.3m², representing 64.2% of the site area.

General Principles of Development Control

Clause 12 of the LEP requires the consent authority to be satisfied that the proposed development is consistent with the relevant principles of development control set out in Part 4.

The relevant principles² of development control are summarised and considered in Table 4.3.1 as follows:

Table 4.3.1 – Warringah LEP 2000			
Part 4 – General Principles of Development Control			
Control	Proposed	Satisfactory	
Clause 38 – Glare and Reflection

4.2 Proposed Environmental Planning Instruments

There are no proposed environmental planning instruments that have been the subject of public consultation and that have been notified to the consent authority of specific relevance to the proposed development.

4.3 Development Control Plans

The Warringah LEP 2000 provides the level of detail normally incorporated in a development control plan (DCP), and there are no further DCP controls of specific relevance to the proposed development.

4.4 Planning Agreements

There are no planning agreements of relevance to the proposed development.

4.5 Impacts of the Development

The proposed development has been carefully designed to provide a good level of amenity for future residents, without imposing any significant or unreasonable impacts on the amenity of surrounding land.

Further, the proposed development has been designed to respect the environmental characteristics of the site, with the building form designed to negotiate the topographical fall of the site towards the rear (northwest), and maintain and enhance the overall landscaped setting of the site and surrounds.

The site is of sufficient size to accommodate the proposed development without imposing any significant or unreasonable impacts on the amenity of surrounding properties in terms of the key considerations of visual bulk, overshadowing, privacy and views.

In the circumstances, it is reasonable to conclude that the proposed development will be compatible with the existing and likely future character of the locality, and will not be perceived as offensive, jarring or unsympathetic to the existing and likely future character.

In an operational sense, a POM has been prepared to regulate the operation of the proposed boarding house. The POM generally aims to ensure there are no adverse impacts arising from the facility on any adjoining property or the neighbourhood, to provide procedures to receive and resolve complaints, maintain the internal and external amenity of the building, and ensure residents enjoy their stay in a safe environment.

The facility will be managed by an experienced operator who will oversee the day-to-day operations of the boarding house, including matters such as general maintenance and cleanliness of common areas, observance by residents of house rules, and services.

The proposed boarding house will provide lodgers with a principal place of residence for periods of three (3) moths or more. The lodgers will have access to their private rooms, and the communal facilities in accordance with the POM.

4.6 Suitability of the Site

The site is located within a mixed-use precinct characterised by a mix of detached dwellings, townhouses, a boarding house, educational facilities, and specialist landscape supply/nurseries.

The site is well located with respect to access to services and facilities. Further, the site is of sufficient size to accommodate the proposed development without imposing any significant or unreasonable impacts

on the amenity of surrounding properties in terms of the key considerations of visual bulk, overshadowing, privacy and views.

Finally, on 20 January 2021, the Land and Environment Court upheld an appeal (*Platform Architects Pty v Northern Beaches Council [2020] NSWLEC 185*) in relation to the refusal of a DA for a boarding house on the adjoining property to the south-east, identified as No. 14 Wyatt Avenue, Belrose.

4.7 Public Interest

The Northern Beaches LGA is statistically one (1) of the most expensive LGA's in NSW. In that regard, the Northern Beaches LSPS (March 2020) notes that:

There is limited supply of social housing and affordable rental housing on the Northern Beaches.

The lack of affordable housing is pronounced for households on lower incomes, driving the demand for social housing and affordable rental housing.

Providing more diverse and affordable rental and social housing options will help very low to moderate income households, including key workers, such as police and health care workers, stay in the area. It will mean people of all incomes and backgrounds can participate in the community.

The proposed development will serve the public interest by providing a good level of amenity for future residents, without imposing any significant or unreasonable impacts on the amenity of surrounding land.

5. CONCLUSION

The subject site is located on the north-western side of Wyatt Avenue, approximately 380 metres to the south-west of Forest Way. The site is currently occupied by a 2-storey dwelling house setback approximately 35 metres from Wyatt Avenue.

The proposed development comprises the demolition of the existing structures, and the construction of a boarding house. The proposed boarding house accommodates 55 boarding rooms, including a manager's room.

Off-street parking is proposed for 34 vehicles, 13 motorcycles, and 55 bicycles. Vehicular access to the front building is proposed via a combined entry/exit driveway located along the Wyatt Avenue frontage of the site. Vehicular access to the rear building is proposed via an extension of the access driveway servicing the approved boarding house to the east (No. 14 Wyatt Avenue).

The proposed development has been carefully designed to provide a good level of amenity for future residents, without imposing any significant or unreasonable impacts on the amenity of surrounding land.

The proposed development complies with the substantial majority of the applicable planning controls, and the building form adopts a number of the overarching design principles incorporated in the approval of the boarding house on the adjoining property to the south-east.

In the circumstances, the proposed development is considered appropriate from a town planning perspective, and suitable for approval having regard to the matters for consideration set out in Section 4.15 of the *Environmental Planning and Assessment Act 1979*.
