Subject: Re: Enquiries regarding Environmental Protection

The following references may assist. The General Manager has a copy of the core issues, that are wider than a simple Gateway proposal. The criticism of the Priority Precinct proposals " generally " by Angelo Candelapas, is by a Professor of Architecture, and he has apparently a petition by a group of award winning Architects. The attached email may put it into a Northern Beaches " relevance ". The Natural Resources background references are more extensive, but the application of the various " Housing Density Models by Angelo Candelapas, then adjusting it for " NATIVE FAUNA HABITAT, seem to suggest that Warriewood Valley has potential, especially if SOIL IMPROVED (for the native trees) .

Tod Dickenson's report (that you have found) does not adequately deal with the " issues "...including the TDR applications (refer to Peter Williams.

Acknowledgement Response to Your Recent Submission

Dear Sylvania Mok,

In looking at the " BROADER PICTURE" of " wetlands" or more correctly RAMSAR WETLANDS, it is clear that Dee Why Lagoon has been a RAMSAR WETLAND for many years., and the " fauna reports " for the local " Friends of Dee Why Lagoon Wildlife Sanctuary " or in Councils' records. listed that area as a potential koala habitat area, but the " SAFE MOVEMENT for FAUNA " to Narrabeen Lakes has had many years " to be improved " ..Swamp Wallaby have in past been in Dee Why Lagoon.

But when looking at the bigger Global Picture, there is evidence of " Habitat Destruction " in the Yellow Sea Area (china and South Korea) that affects migratory birds " Flyway journeys " , and BirdLife Australia have " staff looking at solutions to the " declining population of Birds " that travel from Siberia to Australia annually. One area of " lost habitat = 4,000 km 2 in area (South Korea)). BIRDLIFE AUSTRALIA has some of the Expertise, and one of the Sydney Based bird Community Groups has already shown an interest in the Western Sydney Bird Sanctuary " concept " that already has evidence of birds from Siberia (far away) .
