RE: DA2019/1234 - 0 Wharves And Jetties MANLY NSW 2095

I strongly oppose the Development Application which has taken, what was a roof space, from restaurants with an approved patronage of 50 to over 500 and now seeks to further increase that number to 864! Since the Council approved increase in patronage to 507, the noise levels have increased exceptionally and now stand at a totally unacceptable level.

The plans submitted in support of the Development Application clearly state the outside seating area for El Camino will increase from 45 on the outdoor front balcony to a total of 238 (current 45 seats plus an additional 193). This is an increase of 528%. This indicates the noise levels will increase in proportion with the number of people and will impact significantly on local residents who already have to endure the noise resulting from the November 2018 application.

I have not seen in the on-line documents where the current status of the noise levels, that is those levels that now exist since the addition of El Camino and Sake increased have been properly addressed so query how the Council could even entertain approving the application.

This is a family residential area where the noise and drunkenness of people leaving El Camino has reached an intolerable level.

I request the Council give due consideration to the effect on the local residents and refuse this application.
