**RE: DA2018/1924 - Forest Way FRENCHS FOREST NSW 2086**

I wish to raise concerns with the plans for redevelopment of Forestway Shopping centre regarding pedestrian safety. I see risk of injury to pedestrians due to the location of the proposed vehicle exit from the shopping centre onto Forestway in relation to the relocated pedestrian crossing across Forestway. According to the plan in submitted document ATP-05001, pedestrians waiting to cross from west to east across Forestway will have to stand on a small island between two exit lanes of traffic coming out of the shopping centre. As a regular (daily) commuter taking buses to the city to and from this end of Forestway I am aware of the large number of pedestrians, especially school children who use that particular pedestrian crossing. In my view, the small space set aside at the western end of the pedestrian crossing for people to stand and wait to cross the road is inadequate and will result in people standing, stumbling being pushed onto the left-turn exit ramp from the shopping centre. I request that council address this matter with the developer and coordinate the location of the pedestrian crossing so that it does not land pedestrians in the middle of an outflow of traffic from the shopping centre.

If my typed description of this problem is not clear I am happy to be contacted and try to explain better in person.
