RE: DA2021/0275 - 90 Griffiths Street FAIRLIGHT NSW 2094

I am concerned that my house and garage are made of rendered concrete and share the same sandstone rock slab with 90 Griffiths Street whereby the proposed works will cause damage and cracking to our home and garage, impact on the watercourse flowing through the shared sandstone slab, will impact via increased shadowing on our property which already faces south. The proposed work will also impact on our privacy already being circa a metre from our home. Also when we erected our garage the front section had an historic watercourse to the sea comprised of silt shells etc and we had to go down many metres before hitting bedrock and the whole collapsed on several occasions so concerned about the ramifications of the proposed work on our property around the proposed garage and pool area. We are also concerned about the noise from the site given my husband works shift work with increased noise which echos up throughout our home
