RE: DA2021/1612 - 1 Clarke Street NARRABEEN NSW 2101

Our family is disappointed with the sea wall being built. From information discussed over the years we were under the impression that this type of wall will not protect the beach.

Currently the access to the public beach is horrendous. We had tried to speak to an employee working there who told us to F off and that it was private land. It puts no faith in what public will have after the wall is finished.

What happens when this fails. Who is responsible for fixing it then. I'm not sure this is private land where they are building. To me it's the beach which now has a very dangerous wall. Who will be monitor it when kids are falling in holes and rumble when the sand is eroded. As it will erode again in he's y seas. Who will pay to dump more sand there like the council have been doing for years.

Finally someone needs to monitor the building if it does progress further up the beach as this worksite is unsafe. I was there with bulldozers reversing and no lollipop people to make sure a beach goer (or child) has not climbed up the current wall in its path or fall into the worksite. The only signage to keep put is from the road side.
