RE: DA2020/0552 - 181 Allambie Road ALLAMBIE HEIGHTS NSW 2100

Manly Dam and catchment is a treasure. Not only does it have diverse and rare flora and fauna it attracts over 300000 visitors a year. The catchment needs to be protected.

Expansion of the adjoining school has already destroyed some rare flora and fauna habitat.

This proposed development is taking away further habitats directly and may have detrimental impact down stream.

The catchment should be protected not further developed. A comprehensive list of the species found in and around the dam should be done. Some, like the climbing fish, are rare or endangered.

I do not support the proposed development. This wildlife corridor and flora microcosm is too precious to us to risk with further catchment development.
