Appendix A. PCT 3593 Species List.....	15

## 1.2 Project Location and Context

The subject site is located in Ingleside, a suburb in the Northern Beaches Council area, Sydney (Figure 2). The site is a private property at Lot 1 Sec DP 416586 .

**Figure 2-** Site location on Sydney's Northern Beaches

## 2.Existing Environment and Site Description

### 2.1 Site Description

The property is approximately 6 acres in size and consists of remnant bushland with a small, cleared area, currently used as a car park. A concrete driveway runs along the northern boundary of the property, with Bloodwood Road running along the western boundary.

The site of the proposed development has been cleared in the past and is currently being used as a car park. The proposed shed backs on to intact remnant bushland on the eastern side with the footprint of the building on a degraded, weed infested area on the western side of the property.

**Figure 3-** *Approximate footprint of storage shed over previously cleared/disturbed land.*

### 2.1.2 Vegetation Classification

One Plant Community Type (PCT) is mapped on the site – Sydney Coastal Sandstone Bloodwood Forest. The classification of this community under various legislation is listed in table below. See Appendix for full species list. This plant community has an associated Threatened Ecological Community (TEC) Profile ID 10254 Duffys Forest Ecological Community.

PCT Name	PCTId	Vegetation Formation	Vegetation Class
Sydney Coastal Sandstone Bloodwood Forest	3593	Dry Sclerophyll Forests (Shrubby sub- formation)	Sydney Dry Sclerophyll Forests

**Figure 4-** Plant Community Type 3593

**Photo 1-** Looking north across proposed building footprint.

**Photo 2**-Looking south across proposed buildings footprint.

### 2.1.3 Site Condition

The remnant bushland on the site is in fair condition with some invasive weed species present, particularly around the edges. A rock outcrop is present east of (above) the proposed building site that creates a buffer between the disturbed car park area and the core bushland (photo 4). The core areas of bush are relatively weed free, but some weed control work would be beneficial, working from good bush out.

Cleared areas west of the proposed building location have had weed control conducted but experience ongoing annual weed flushes. This area has an effluent management area proposed and should be densely planted with suitable locally indigenous vegetation.

### 2.3.4 Exotic vegetation including Priority Weeds and Weeds of National Significance

The *Biosecurity Act 2015* and regulations provide specific legal requirements for State level priority weeds. Priority weed hierarchical order based on management objective; Prevention, Eradication, Containment and Asset Protection (Greater Sydney Regional Strategic Weed Management Plan 2017-2022).

From a site inspection twenty-nine exotic flora species were recorded (see below). Two Weeds of National Significance (WONS) were found that also have State Objectives in the Greater Sydney Regional Strategic Weed Management Plan 2017-2022.

**Photo 3-** *Relativley intact bushland east of the proposed building site, with some weed species present.*

**Photo 4-** *Rock outcrop east of proposed building site creating a buffer between disturbed area and core bushland.*

Scientific Name	Common Name	WoNS	State Priority Weed Objective	Regional Objective	Priority	Other weeds of Regional Concern, Asset/value at risk
<b>HERBACEOUS</b>						
<i>Agapanthus praecox</i> subsp. <i>orientalis</i>	Agapanthus	-	-	-		Environment
<i>Ageratina adenophora</i>	Crofton Weed	-	-	-		Environment, Agriculture
<i>Ageratina riparia</i>	Mistflower	-	-	-		Environment, Agriculture

### 3. Threatened Species Search

All information (Species Names, Common Name, *Biodiversity Conservation Act 2016*, EPBC Act and Habitat Requirements) is taken from the Atlas of NSW Wildlife Database:

<http://www.bionet.nsw.gov.au/> Species listed are from a 10 x 10km area surrounding the study site. Species listed under the Sensitive Species Data Policy may have their locations denatured. Search criteria: Public Report of all Valid Records of Animals in selected area [North: -33.61 West 151.23 East 151.23 South -33.71] returned a total of 17 species recorded in the area.

An assessment of the likelihood of occurrence was made for threatened species identified in database search of the Atlas of NSW Wildlife (BioNet). The number of records within 10km of the proposed work site have been listed. Habitat requirements and if they are present in the proposed work area are noted. This information has been extracted from the NSW Threatened Species Profiles. Results of the site inspection and professional judgment gives the likelihood of occurrence. Five terms are used, defined as follows:

- “known” = the species was or has been observed on the site
- “likely” = a medium to high probability that a species uses the site
- “potential” = suitable habitat for a species occurs on the site, but there is insufficient information to categorize the species as likely to occur, or unlikely to occur
- “unlikely” = a very low probability that the species uses the site
- “no” = habitat on the site and in the vicinity is unsuitable for the species

#### 3.1 Threatened Fauna Desktop Survey

Within 10km of proposed work area seventy six threatened species were found in a desktop survey. In close proximity to site and likely to potential to occur are the following species (for full list and details see Appendix ):

Common Name	Species Name	BC Act 2016	EPBC Act 1999 or migratory species listed under EPBC Act or other	Likelihood of Occurrence
Red-crowned Toadlet	<i>Pseudophryne australis</i>	Vulnerable	Not listed	Potential
Giant Burrowing Frog	<i>Heleioporus australiacus</i>	Vulnerable	Vulnerable	Potential
Rosenberg's Goanna	<i>Varanus gouldii</i>	Vulnerable	Not listed	Potential
White-bellied Sea-Eagle	<i>Haliaeetus leucogaster</i>	Vulnerable	Not listed	Potential
Eastern Osprey	<i>Pandion cristatus</i>	Vulnerable	Not listed	Potential
Glossy Black-Cockatoo	<i>Calyptorhynchus lathami</i>	Vulnerable	Not listed	Potential
Little Lorikeet	<i>Glossopsitta pusilla</i>	Vulnerable	Not listed	Potential
Swift Parrot	<i>Lathamus discolor</i>	Endangered	Critically endangered	Potential
Barking Owl	<i>Ninox connivens</i>	Vulnerable	Not listed	Likely

<b>Powerful Owl</b>	<i>Ninox strenua</i>	Vulnerable	Not listed	<b>Likely</b>
<b>Masked Owl</b>	<i>Tyto novaehollandiae</i>	Vulnerable	Not listed	<b>Potential</b>
<b>Varied Sittella</b>	<i>Daphoenositta chrysoptera</i>	Vulnerable	Not listed	<b>Potential</b>
<b>Southern Brown Bandicoot</b>	<i>Isodon obesulus obesulus</i>	Endangered	Endangered	<b>Potential</b>
<b>Eastern Pygmy-possum</b>	<i>Cercartetus nanus</i>	Vulnerable	Not listed	<b>Potential</b>
<b>Squirrel Glider</b>	<i>Petaurus norfolcensis</i>	Vulnerable	Not listed	<b>Potential</b>
<b>Grey-headed Flying-Fox</b>	<i>Pteropus poliocephalus</i>	Vulnerable	Vulnerable	<b>Potential</b>
<b>Eastern Coastal Free-tailed Bat</b>	<i>Micronomus norfolkensis</i>	Vulnerable	Not listed	<b>Potential</b>
<b>Large-eared Pied Bat</b>	<i>Chalinolobus dwyeri</i>	Vulnerable	Vulnerable	<b>Potential</b>
<b>Greater Broad-nosed Bat</b>	<i>Scotenanax rueppellii</i>	Vulnerable	Not listed	<b>Potential</b>
<b>Little Bent-winged Bat</b>	<i>Miniopterus australis</i>	Vulnerable	Not listed	<b>Potential</b>
<b>Large Bent-winged Bat</b>	<i>Miniopterus orianae oceanensis</i>	Vulnerable	Not listed	<b>Potential</b>

### 3.2 Threatened Flora Search

All information (Species Names, Common Name, *Biodiversity Conservation Act 2016*, EPBC Act and Habitat Requirements) is taken from the Atlas of NSW Wildlife Database:  
<http://www.bionet.nsw.gov.au/> Species listed are from a 10 x 10km area surrounding the study site.

Within 10km of proposed work area 17 threatened species were found in a desktop survey. In close proximity to the site and likely or potential to occur on the site are the following three species;

<b>Species Name</b>	<b>Common Name</b>	<b>BC Status</b>	<b>EPBC Status</b>	<b>No. of records within 10km radius of proposed work area</b>	<b>Likelihood of occurrence</b>
<i>Tetratheca glandulosa</i>		V	-	53	<b>Potential (not found)</b>
<i>Microtis angusii</i>	Onion Orchid	E	E	165	<b>Potential (not found)</b>
<i>Grevillea caleyi</i>	Caley's Grevillea	CE	CE	458	<b>Potential (not found)</b>

## 4. Conclusions/Recommendations

- From the plans provided and through onsite inspections it does not appear that the proposed building will have any negative impact on the local biodiversity.
- Clearing of undisturbed core bushland will not be required as the site is on a disturbed weed infested area.
- Ongoing weed control on the building site and in core areas of bushland surrounding the site should continue throughout the project and will be beneficial to the bushland condition.
- Landscape areas associated with the project should be planted out with locally indigenous species (4.1 see below) extracted from the species list in Appendix A.
- The effluent management area should be densely planted with suitable locally indigenous species (4.1 see below).

### 4.1 Recommended species for planting

Recommended Species for Landscape areas	Recommended Species for Effluent Management Area
<i>Eucalyptus punctata</i>	<i>Schoenus imberbis</i>
<i>Banksia serrata</i>	<i>Ficinia nodosa</i>
<i>Angophora costata</i>	<i>Juncus kraussii</i>
<i>Banksia ericifolia</i>	<i>Juncus usitatus</i>
<i>Acacia ulicifolia</i>	<i>Gahnia clarkei</i>
<i>Actinotus helianthi</i>	<i>Baloskion tetraphyllum</i>
<i>Platysace linearifolia</i>	
<i>Banksia spinulosa</i>	
<i>Lomandra longifolia</i>	
<i>Dianella caerulea</i>	
<i>Grevillea buxifolia</i>	
<i>Grevillea sericea</i>	
<i>Themedeia australis</i>
