RE: DA2021/1612 - 1 Clarke Street NARRABEEN NSW 2101

DA2021/1612

I am writing in regards to the proposed Sea Wall development mentioned above

As a long term resident of the Northern Beaches I have seen the changes to our coastline.

I am in complete disagreement with this proposal.

Seawalls can cause increased erosion in adjacent areas of the beach that do not have seawalls. This so-called "flanking erosion" takes place at the ends of seawalls. Wave energy can be reflected from a seawall sideways along the shore, causing coastal bluffs without protection to erode faster

How will this effect our local world surfing reserve at North Narrabeen beach? A beach known world wide for its world class waves and even a recently this year called upon by the World Surf League to host one of their championship tour events.

Please reconsider this development and any further sea walls moving forward and maybe look into the solution they have gone with at Snapper Rocks with the sand pumping station

Many thanks Megan
