Re: 39 Arnott Cres Warriewood,

At the above address we investigated the existing storm water lines & found them to be in good working order.

With the roof extension over the existing deck there will be 2x extra down pipes added to the system.

As the ground level below the deck is an existing hard surface with grated drain points to the existing storm water we see that there will be no extra rainwater entering the storm water lines, just now the rainwater will be collected from a new roof not the paved area below.

Regards

Jon Freeman
