**Subject:** DA2020/0552 (181 Allambie Road Allambie Heights): Registration to address the panel tomorrow

Hi Carly,

Please register me for this:

Julia Walsh  
11 Arana Street  
Manly Vale

0466 683 009

I will be speaking on the fact that this site will be UNABLE to contain its stormwater and avoid further damage to the fragile ecosystem of Manly Dam as sediment settles on the bottom of creeks and the dam itself suffocating the plants and breaking down the biodiversity of the dam. Over recent years Manly Vale Public School promised the world only to deliver recurring nightmares – see the attached documentation to please be shared with the panel – they might enjoy the swearing towards the end as the scale of the problem becomes increasingly evident (this is just one of approximately 30 documented stormwater pollution events and this site is similar to the one at Allambie with the added issue that one is further upstream):

<https://vimeo.com/480074757>

The volume and velocity of the run off not only polluted the waterways with sediment, it also undermined the stability of trees downstream which subsequently fell over despite the fact they had been preserved as 'high ecological value'. After the clearing of designated trees for the APZ (which was bad enough) at least 6 high value trees were then lost due to run off as a result of the clearing of the land and the construction.

This occurred despite assurances it would not, despite constant reporting by residents over YEARS despite fines from Council and EPA – none of these measures stopped the pollution – look how many 'experts' they threw at this problem yet it persisted (you would NOT BELIEVE the money spent and yet they could not fix it):

# Stormwater despite 'measures'

26/06/2019, 11 Arana St

## 3.1. Stormwater Design

As Previously outlined, there have been several design consultants who have undertaken stormwater design as part of this development. In order to develop an overarching design, JN compiles information from the following design engineering firms and construction companies:

- NSW Public Works
- Coffey Project Management
- ABC Consulting
- Norman Disney & Young
- Northrop Consulting Engineers
- Martens & Associates
- NBRS Architects
- Lahey Constructions
- Ashmor Plumbing
- JN Consulting Engineers

We cannot afford a repeat of this from the Allambie side – I do not understand why we are so hell bent to decimate the quality of our last inland freshwater resource?

NB Council have COMPLETELY failed to address creek protection in their Assessment Report – since they were so closely involved over and over and over again at the MVPS site it is an unfathomable oversight unless it was deliberate or just incredible incompetence in the development of the Report. I don't know but that is why I am now required to raise this issue with the panel as Council has failed to.

If you can advise a window of time that I will be contacted to speak that would be great – also what is the link to watch the entire proceeding?

Thank you

Julia
