RE: DA2020/1172 - 54 Bardo Road NEWPORT NSW 2106

Submission from Mr. B Best, 7/30 - 32 Bardo Road, Newport 2106, regarding the following notice of proposed Development:

Application No: DA2020/1172 Address: 54 Bardo Road Newport Description: Seniors Housing Development

For the attention of Nick Keeler,

Being a resident of Bardo Road, Newport, I believe the proposed plans outlined in DA2020/1172 are totally inappropriate for this community.

The concerns are no different to those surrounding the proposed development on 34/46 Bardo Road, Newport that was put to council earlier this year, and are outlined as follows;

Over Development and Streetscape

Unfortunately this is another case of massive overdevelopment within an area that prides itself as being part of a very green and natural streetscape. Although we live in an over 55's development ourselves, this application features 6 units on an area approximately half the size of our block, which has a total of 7 units - as such it is not surprising that it exceeds the important floor space ratio,

We also believe that the proposal is out of character and compatibility with other buildings, both new and old in Bardo Road.

Traffic and safety Issues

Bardo Road is a narrow, busy road. Already the traffic moving from east to west and vice versa down Bardo Road is most often reduced to one car at a time, with vehicles having to pull into the side to allow another vehicle to pass - indicating that the infrastructure is already way beyond acceptable levels. As the development is close to a busy kindergarten, this is a safety factor that is especially important during parent drop off and pick up times.

Fauna, Wildlife and Tree Preservation Concerns

Sydney's Northern Beaches and especially Newport is home to many wonderful native animals including Brush-tailed and ring-tailed Possums, Bandicoots, Frogs, lizards, lorikeets, kookaburras, Parrots and Rosellas. Because of the dense tree coverage in Newport we enjoy more than our fair share of native animals. The proposed development requires that four

healthy, mature trees be removed from the block. By removing these trees and increasing land coverage by overdevelopment - our natural heritage is rapidly being eroded. Most of us live in Newport by choice and we most certainly do not want to lose this wildlife bonus.

Conclusion

As the many other letters of objection outline, there are many individual factors that fail to meet the standards set and hopefully maintained by both the NSW State government and the Northern Beaches Council. From over development to traffic hazards, fauna and tree concerns to environmental issues - all of which combined create a development that is just not right for this area of Newport. We are not against development, but we are mindful that developers, councils and state governments not only have a responsibility to protect those existing owners who have lived in the area for many years, but also to ensure that the many wonderful benefits and features they enjoy are maintained for future generations.

AS SUCH I BELIEVE THAT THIS PROPOSED DEVELOPMENT SHOULD BE REJECTED.
