SEDIMENT CONTROL FENCE - TYPE 1
1.2m star pickets to be driven in a minimum of 600mm at a maximum of 1800mm centres.
Self-supporting geotextile fabric to be securely fastened to the upslope side of each picket with tie wires and turned upslope in a trench at least 200mm deep.
void joints in the filter fabric if possible but if necessary, joints are to be made at a support post with a minimum of 150mm overlap of fabric, securely stitched together with both ends fixed to the post.
Backfill the trench over the toe of the fabric.

TREE PROTECTION FENCE
Wrap tree with orange hessian
90x45mm timber planks
2.4m high above ground level.
Timber to be wrapped with hoop iron.
Tree protection signage to be mounted onto fencing.
