Subject: DA 2018/1481 Telstra Tower

Your proposed rejection of this application will deprive over 300 elderly residents in the RSL Lifecare Village the ability to make a simple mobile phone call from within their own units. Something the negative submission writers take for granted. At present the residents have to stand in the street to get the minimum of reception. A dangerous situation and unacceptable for those residents that are immobile. Most of these residents were not technically capable of making a favourable submission online and are the "quiet residents" in your Council but obviously their situation doesn't count. I write this as resident of the Village who is sick of watching these poor residents having to stand outside regardless of the weather to make or receive a phone call.
