DA2020/0046
22 OCEAN ROAD – PALM BEACH, NSW
STORMWATER (SW) DISCHARGE PROPOSAL
GENERAL ARBORICULTURAL ADVICE
Ref No: RTC-8920

This report has been commissioned by VENARI Projects Mr. Geoffrey Hunt. The reason this report has been commissioned is to provide advice on minimising SW excavation impacts that may occur on two (2) heritage listed Norfolk Island Pine trees known as trees 2 & 3. In preparation for this report a site consultation was conducted Wednesday 6th May 2020 with reference to Stormwater Layout Plan by Australian Consulting Engineers Dwg No: 101 issue B dated 23.3.2020.

Summary of assessment: The proposed SW layout plan was determined as having a detrimental impact to adjacent tree 3.

The redirection of the SW proposal as shown below was determined as the most suitable location for drainage as having the least impact to discharge storm water to Ocean Road.

Prior to any excavation within specified tree protection zones further advice from an appointed project arborist is required. Where excavation within structural root zone setbacks occurs prior non-destructive tree root investigations are required to provide more advice on the location, distribution and impact on critical underlying tree roots. All works within tree protection zones are to comply with tree protection measures as specified within the development conditions of consent under DA2020/0046.

Yours sincerely

Mark A Kokot

AQF Level 5 consulting arborist
