Dear Council

As a nearby resident, I object to this DA on public health grounds, especially in relation to children.

Any issue concerning children requires higher standards of care in-law. Fiduciary duty is never far away. As council representing residents, landowners, and traditional custodians, council has nothing less than a fiduciary duty in principle to act in good faith for "we the people", who else could council be acting on behalf of ?

Recent scientific research is closing in on proof of EMF interference in brain activity with long term effects unknown.

I draw comparison to the CFC argument of the 1980's. Wait and see for long term health effects of 4-5G EMF on people is not an ethical option. It will be too late, and the class lawsuits will be massive. Preventative Class actions are already taking place in France. I am investigating this option here in Australia.

Please take notice, and do the right thing by the people, your residents. Or reconsider your Public Liability and D&O policy limits, if you can still get full cover... I hear from the largest insurance broker in the world that liability cover is getting harder to place.
