**RE: DA2022/0246 - 120 Prince Alfred Parade NEWPORT NSW 2106**

We moved into the area recently and noticed the huge fig trees at the park. We had trouble walking around the roots on the footpath, so needed to walk on the busy road to safely walk around the fig trees (cars needed to swerve when we did this). We believe all the fig trees and their roots present a significant risk to public safety and are dangerous for pedestrians who want to use the nearby footpath. There are also issues regarding the roots damaging stormwater systems that could damage the earth nearby that could cause earth movement/land slides. Based on the current risks to the public, we support the removal of these oversized fig trees.
