RE: DA2019/1346 - 4 - 10 Inman Road CROMER NSW 2099

Hi Lashta,

My wife and myself have a real issue with the huge traffic flow of trucks that will come out of this job. We live on the corner of South Creek Road and Campbell Avenue have tried numerous times to get someone from council to come out to our address and look at the round-a-bout and subsequent damage to the nature strip and our property from trucks that literally can't navigate the round-a-bout as they are too big. They almost make it all the way up onto the footpath sometimes. The issue with the submission of the \$450 million odd project is that there will be constant trucks mounting this kerb and causing more and more damage to our property, When they drop off the kerb you can feel the vibration throughout our house. The last time I wrote to council I didn't even get a response.

I strongly object to the development application as the infrastructure of one of the two major roads out of the area is not sufficient to handle the load which will be put on it, also the trucks seem to think its fine to start heading to site at 3am like they did when the "lighthouse" building was being excavated which is a huge annoyance when you have a young family.

If the roads are fixed and there are times where trucks are allowed to start in the morning then I have no issue with the development itself.

I will call you in a few days to discuss.

Regards
