RE: DA2018/1481 - 1 / 0 Veterans Parade NARRABEEN NSW 2101

To Whom it may concern,

This mobile phone tower will not only affect the surrounding residents in this area, but it is right next to the school that my children (and many others) attend. For 6 hrs each day these children will be subjected to mobile waves that many studies have shown to be harmful.

"People living within 300m of such a tower showed an increased rate of unpleasant symptoms: Nausea, loss of appetite, visual disruptions and difficulty in moving - within less than 10m. Irritability, depression, concentration problems, memory loss, dizziness and reduced libido - within 100m. Headaches, sleep problems, feelings of discomfort and skin problems - within 100-200m. High rate of fatigue - within 200- 300m. (Study by Dr Roger Santini, France)

A study in Belo Horizonte Brazil looked at the addresses of 7,141 people that had died from cancers of the prostate, breasts, lungs, kidneys and liver. These were cross checked against cell tower locations within the city. It found that those who lived within 500 metres of a phone tower had a higher mortality rate than the average mortality rate of the entire city.

This is unacceptable for the residents of the RSL village as well as the residents/property owners in the surrounding area.

As a community we are 100% opposed to this development and will continue to oppose it.

Shannon Mills
