**RE: DA2018/1667 - 181 Allambie Road ALLAMBIE HEIGHTS NSW 2100**

To Whom it May Concern,  
The Manly Dam catchment, is home to the most northerly population of climbing fish (Climbing Galaxias) in Australia and they have been living quietly here for an estimated 60 million years ! These fish can only live in clean fresh water which is why development and encroachment, near creeks, threatens their precarious existence. Manly Dam is also the very last place in Sydney where it's still (just) possible for humans to swim in clean freshwater!  
**LEAVE IT ALONE!**
