RE: DA2017/1274 - 52 Cabbage Tree Road BAYVIEW NSW 2104

All local government councils in Australia's larger cities must stop this disease of growth and fresh development which is proven to destroy the already scarce wildlife habitat as well as land for responsible agricultural primary production. This proposal along with all others of such rapacious impact are not legacies that Australians should leave for its future generations. Please get a grip on responsible government for a sustainable future. I don't decry the need for improved housing both in quality and quantity; however, development of virgin land verses redevelopment of existing urban infrastructure is just a no-win situation in the longer term. Big corporations must not be allowed to buy-in politically to set the agenda for public policy. Their self-interest and greed combine to simply trash the already diminishing common wealth of the nation to which all levels of government have a massive and primary duty of care to protect and nurture.
