RE: DA2017/1274 - 52 Cabbage Tree Road BAYVIEW NSW 2104

At this point in time we are in the midst of the sixth mass extinction, species extinction has reached levels higher than ever since the mass extinction 65 million years ago when dinosaurs were lost. For the first time ever mass extinction is caused by a single species. Science has proven that Biodiversity is imperative for the health of the environment in which we live and depend on for our future. Scientists believe that extinction of three out of four familiar animal species will be complete within three human life times (300 years). Every action that can be made to reduce the impact of this human caused problem must be sort and adhered to. Ultimately, the profits and revenue created by allowing the development of the 85 Unit, 7 apartment buildings, (DA1274/2017) in the middle of the designated high priority wildlife corridor, will amount to nothing if we lose our current quality of life, obtained entirely from this precarious natural balance. This balance cannot be bought. It can only be preserved or lost.
