**RE: DA2020/0661 - 7356 / 1167221 Huston Parade NORTH CURL CURL NSW 2099**

Once again ,have all existing towers beenappraise.  
The act says where ever possible existing infrustructure,towers should be used shared,  
Why is Griffin rd lagoon bridge area not considered in a lower height form.  
Cost was the excuse i believe last time.  
At least this site is further from school and most fields  
The park is now more than ever a space for people to clear their heads free ish from developement.so important now.  
If this tower is built all providers will be allowed to use it,by law.so visual impact is important.  
I also believe more smaller towers provides lower EMF levels,but costs more ,is that why this type of plan is not being used.  
There is still plenty of question marks as to the radiation effect on developing brains eg children.these providers should be using nest practise models,i dont think this is.  
So in summary  
Have all existing towers been used reviewed?  
Do we want the children to be in the higher EMF fields?  
If needed cannot smaller low profile lower output transmitter antenna be used?
