

APPENDIX 2

CLAUSE 4.6 – FLOOR SPACE RATIO

**WRITTEN SUBMISSION PURSUANT TO CLAUSE 4.6 OF
MANLY LOCAL ENVIRONMENTAL PLAN 2013**

13 BARRABOOKA STREET, CLONTARF

ADDITIONS AND ALTERATIONS TO AN EXISTING DWELLING

**VARIATION OF A DEVELOPMENT STANDARD RELATING TO COUNCIL'S FLOOR SPACE RATIO
CONTROL AS DETAILED IN CLAUSE 4.4 OF THE
MANLY LOCAL ENVIRONMENTAL PLAN 2013**

For: Additions and alterations to an existing dwelling
At: 13 Barrabooka Street, Clontarf
Owner: Ian & Lisa Dunn
Applicant: Ian & Lisa Dunn
C/- Vaughan Milligan Development Consulting Pty Ltd

1.0 Introduction

This written request is made pursuant to the provisions of Clause 4.6 of Manly Local Environmental Plan 2013. In this regard, it is requested Council support a variation with respect to compliance with the maximum floor space ratio development standard as described in Clause 4.4 of the Manly Local Environmental Plan 2013 (MLEP 2013).

2.0 Background

Clause 4.4 restricts the maximum floor space area control within this area of the Clontarf locality and refers to the floor space ratio noted within the "*Floor Space Ratio Map*."

The relevant maximum floor space control in this locality is 0.4:1 or for this site with an area of 470.4m², the maximum gross floor area is 188.16m² and is considered to be a development standard as defined by Section 4 of the Environmental Planning and Assessment Act.

The existing dwelling on the site presents a gross floor area of 275m² or 0.58:1.

The proposed development will see an increase in the total floor area of 40m² when compared to the existing floor area, to a maximum of floor area of 315m² or 0.669:1, and therefore presents a variation of 126.84m² or 67.1% to the control.

Notably, the extent of the new floor area (40m² of the proposed new floor area) will be within the existing lower ground floor level and excavated below the current dwelling)) with the result that

the existing bulk and scale of the building when viewed from neighbouring properties or the surrounding public areas is largely unchanged.

The controls of Clause 4.4 are considered to be a development standard as defined in the Environmental Planning and Assessment Act, 1979.

It is noted that the Council's Manly Development Control Plan 2013 Amendment 14 and in particular Clause 4.1.3.1 provides exceptions to the FSR control where the lot is less than minimum required lot size under Council's LEP Lot Size Map and the development satisfied the LEP Objectives and the DCP provisions.

In this instance the required minimum lot size in the locality is 1150m², with the DCP permitting a variation to a minimum lot size of 750m² and when calculated against this required lot size, the permissible floor area is 300m². The proposed development will present a total floor area of 315m² or a FSR of 0.42:1, which is marginally in excess of the control when assessed against the minimum lot size in the locality.

Is clause 4.4 of MLEP a development standard?

- (a) The definition of "development standard" in clause 1.4 of the EP&A Act means standard is fixed in respect of an aspect of a development and include:

"(d) the cubic content of floor space of a building."

- (b) Clause 4.4 relates to floor space of a building. Accordingly, clause 4.4 is a development standard.

3.0 Purpose of Clause 4.6

The Manly Local Environmental Plan 2013 contains its own variations clause (Clause 4.6) to allow a departure from a development standard. Clause 4.6 of the Standard Instrument is similar in tenor to the former State Environmental Planning Policy No. 1, however the variations clause contains considerations which are different to those in SEPP 1. The language of Clause 4.6(3)(a)(b) suggests a similar approach to SEPP 1 may be taken in part.

There is recent judicial guidance on how variations under Clause 4.6 of the Standard Instrument should be assessed. These cases are taken into consideration in this request for variation.

In particular, the principles identified by Preston CJ in *Initial Action Pty Ltd vs Woollahra Municipal Council* [2018] NSWLEC 118 have been relied on in this request for a variation to the development standard.

4.0 Objectives of Clause 4.6

The objectives of Clause 4.6 are as follows:

- (a) To provide an appropriate degree of flexibility in applying certain development standards to particular development, and*
- (b) To achieve better outcomes for and from development by allowing flexibility in particular circumstances.*

The decision of Chief Justice Preston in *Initial Action Pty Ltd v Woollahra Municipal Council* [2018] NSWLEC 118 (“Initial Action”) provides guidance in respect of the operation of clause 4.6 subject to the clarification by the NSW Court of Appeal in ***RebelMH Neutral Bay Pty Limited v North Sydney Council* [2019] NSWCA 130 at [1], [4] & [51]** where the Court confirmed that properly construed, a consent authority has to be satisfied that an applicant’s written request has in fact demonstrated the matters required to be demonstrated by cl 4.6(3).

Initial Action involved an appeal pursuant to s56A of the Land & Environment Court Act 1979 against the decision of a Commissioner.

At [90] of *Initial Action* the Court held that:

“In any event, cl 4.6 does not give substantive effect to the objectives of the clause in cl 4.6(1)(a) or (b). There is no provision that requires compliance with the objectives of the clause. In particular, neither cl 4.6(3) nor (4) expressly or impliedly requires that development that contravenes a development standard “achieve better outcomes for and from development”. If objective (b) was the source of the Commissioner’s test that non-compliant development should achieve a better environmental planning outcome for the site relative to a compliant development, the Commissioner was mistaken. Clause 4.6 does not impose that test.”

The legal consequence of the decision in *Initial Action* is that clause 4.6(1) is not an operational provision and that the remaining clauses of clause 4.6 constitute the operational provisions.

Clause 4.6(2) of MLEP provides:

- (2) Development consent may, subject to this clause, be granted for development even though the development would contravene a development standard imposed by this or any other environmental planning instrument. However, this clause does not apply to a development standard that is expressly excluded from the operation of this clause.*

Clause 4.4 (the FSR development standard) is not excluded from the operation of clause 4.6 by clause 4.6(8) or any other clause of MLEP.

Clause 4.6(3) of MLEP provides:

- (3) Development consent must not be granted for development that contravenes a development standard unless the consent authority has considered a written request from the applicant that seeks to justify the contravention of the development standard by demonstrating:*

- (a) that compliance with the development standard is unreasonable or unnecessary in the circumstances of the case, and*
- (b) that there are sufficient environmental planning grounds to justify contravening the development standard.*

The proposed development does not comply with the FSR development standard pursuant to clause 4.4 of MLEP which specifies an FSR of 0.4:1 however as the proposal will only result in a minor increase in the floor area of 40m² in total with the new floor area at the lowest floor level and within the building undercroft, strict compliance is considered to be unreasonable or unnecessary in the circumstances of this case and there are considered to be sufficient environmental planning grounds to justify contravening the development standard. The relevant arguments are set out later in this written request.

Clause 4.6(4) of MLEP provides:

- (4) Development consent must not be granted for development that contravenes a development standard unless:*
 - (a) the consent authority is satisfied that:*
 - (i) the applicant's written request has adequately addressed the matters required to be demonstrated by subclause (3), and*
 - (ii) the proposed development will be in the public interest because it is consistent with the objectives of the particular standard and the objectives for development within the zone in which the development is proposed to be carried out, and*
 - (b) the concurrence of the Planning Secretary has been obtained.*

In *Initial Action* the Court found that clause 4.6(4) required the satisfaction of two preconditions ([14] & [28]). The first precondition is found in clause 4.6(4)(a). That precondition requires the formation of two positive opinions of satisfaction by the consent authority. The first positive opinion of satisfaction (cl 4.6(4)(a)(i)) is that the applicant's written request has adequately addressed the matters required to be demonstrated by clause 4.6(3)(a)(i) (*Initial Action* at [25]). The second positive opinion of satisfaction (cl 4.6(4)(a)(ii)) is that the proposed development will be in the public interest because it is consistent with the objectives of the development standard and the objectives for development of the zone in which the development is proposed to be carried out (*Initial Action* at [27]). The second precondition is found in clause 4.6(4)(b). The second precondition requires the consent authority to be satisfied that the concurrence of the Planning Secretary (of the Department of Planning and the Environment) has been obtained.

Under cl 64 of the *Environmental Planning and Assessment Regulation 2000*, the Secretary has given written notice dated 21 February 2018, attached to the Planning Circular PS 18-003 issued on 21 February 2018, to each consent authority, that it may assume the Secretary's concurrence

for exceptions to development standards in respect of applications made under cl 4.6, subject to the conditions in the table in the notice.

Clause 4.6(5) of MLEP provides:

- (5) *In deciding whether to grant concurrence, the Secretary must consider:*
- (a) *whether contravention of the development standard raises any matter of significance for State or regional environmental planning, and*
 - (b) *the public benefit of maintaining the development standard, and*
 - (c) *any other matters required to be taken into consideration by the Secretary before granting concurrence.*

Council has the power under cl 4.6(2) to grant development consent for development that contravenes a development standard, if it is satisfied of the matters in cl 4.6(4)(a), and should consider the matters in cl 4.6(5) when exercising the power to grant development consent for development that contravenes a development standard: *Fast Buck\$ v Byron Shire Council* (1999) 103 LGERA 94 at 100; *Wehbe v Pittwater Council* at [41] (*Initial Action* at [29]).

Clause 4.6(6) relates to subdivision and is not relevant to the development. Clause 4.6(7) is administrative and requires the consent authority to keep a record of its assessment of the clause 4.6 variation. Clause 4.6(8) is only relevant so as to note that it does not exclude clause 4.4 of MLEP from the operation of clause 4.6.

The specific objectives of Clause 4.6 are as follows:

- (a) *to provide an appropriate degree of flexibility in applying certain development standards to particular development, and*
- (b) *to achieve better outcomes for and from development by allowing flexibility in particular circumstances.*

The development will achieve a better outcome in this instance as the site will provide for the construction of alterations and additions to an existing dwelling, which is consistent with the stated Objectives of the C3 Environmental Management Zone, which are noted as:

- *To provide for the housing needs of the community within a low density residential environment.*
- *To enable other land uses that provide facilities or services to meet the day to day needs of residents.*

The proposal will provide for the construction of alterations and additions to an existing dwelling to provide for increased amenity for the site's occupants.

The new works maintain a bulk and scale which is in keeping with the extent of surrounding development, with a consistent palette of materials and finishes, in order to provide for high quality development that will enhance and complement the locality.

The proposal will not exceed the existing ridge level of the current dwelling.

Notwithstanding the non-compliance with the maximum floor space ratio, together with the fact that the development will result in only a modest total increase in the gross floor area of 39m² with only 1m² increase above the ground and first floor levels, the new works will provide attractive alterations and additions to a residential development that will add positively to the character and function of the local residential neighbourhood. It is noted that the proposal will maintain a consistent character with the built form of nearby properties.

The proposed alterations and additions will not see any adverse impacts on the views enjoyed by neighbouring properties.

The works will not see any adverse impacts on the solar access enjoyed by adjoining dwellings.

The general bulk and scale of the dwelling as viewed from the public areas in Barrabooka Street from the surrounding private properties will be largely maintained.

5.0 The Nature and Extent of the Variation

- 5.1 This request seeks a variation to the FSR development standard contained in clause 4.4 of MLEP.
- 5.2 Clause 4.4 of MLEP specifies an allowable gross floor area for a site in this part of Clontarf of 0.4:1 or for this site, the allowable gross floor area is 188.16m².
- 5.3 The subject site has an area of 470.4m².
- 5.4 The existing dwelling has a gross floor area of 275m² or FSR of 0.58:1. The proposal has a calculable gross floor area of 315m² or FSR of 0.667:1. The proposal will see a minor increase in the floor area of only 40m², which is within the building undercroft and is not visible from Barrabooka Street
- 5.5 The total non-compliance with the FSR control is 126.84m² or 66.9%.
- 5.6 When assessed against a minimum lot area of 750m², the proposal presents an FSR of 0.42:1, which is a reduced extent of non-compliance with the maximum floor space ratio control.

6.0 Relevant Caselaw

6.1 In *Initial Action* the Court summarised the legal requirements of clause 4.6 and confirmed the continuing relevance of previous case law at [13] to [29]. In particular the Court confirmed that the five common ways of establishing that compliance with a development standard might be unreasonable and unnecessary as identified in *Wehbe v Pittwater Council* (2007) 156 LGERA 446; [2007] NSWLEC 827 continue to apply as follows:

17. *The first and most commonly invoked way is to establish that compliance with the development standard is unreasonable or unnecessary because the objectives of the development standard are achieved notwithstanding non-compliance with the standard: Wehbe v Pittwater Council at [42] and [43].*
18. *A second way is to establish that the underlying objective or purpose is not relevant to the development with the consequence that compliance is unnecessary: Wehbe v Pittwater Council at [45].*
19. *A third way is to establish that the underlying objective or purpose would be defeated or thwarted if compliance was required with the consequence that compliance is unreasonable: Wehbe v Pittwater Council at [46].*
20. *A fourth way is to establish that the development standard has been virtually abandoned or destroyed by the Council's own decisions in granting development consents that depart from the standard and hence compliance with the standard is unnecessary and unreasonable: Wehbe v Pittwater Council at [47].*
21. *A fifth way is to establish that the zoning of the particular land on which the development is proposed to be carried out was unreasonable or inappropriate so that the development standard, which was appropriate for that zoning, was also unreasonable or unnecessary as it applied to that land and that compliance with the standard in the circumstances of the case would also be unreasonable or unnecessary: Wehbe v Pittwater Council at [48]. However, this fifth way of establishing that compliance with the development standard is unreasonable or unnecessary is limited, as explained in Wehbe v Pittwater Council at [49]-[51]. The power under cl 4.6 to dispense with compliance with the development standard is not a general planning power to determine the appropriateness of the development standard for the zoning or to effect general planning changes as an alternative to the strategic planning powers in Part 3 of the EPA Act.*
22. *These five ways are not exhaustive of the ways in which an applicant might demonstrate that compliance with a development standard is unreasonable or unnecessary; they are merely the most commonly invoked ways. An applicant does not need to establish all of the ways. It may be sufficient to establish only one way, although if more ways are*

applicable, an applicant can demonstrate that compliance is unreasonable or unnecessary in more than one way.

6.2 The relevant steps identified in *Initial Action* (and the case law referred to in *Initial Action*) can be summarised as follows:

1. Is clause 4.4 of MLEP a development standard?
2. Is the consent authority satisfied that this written request adequately addresses the matters required by clause 4.6(3) by demonstrating that:
 - (a) compliance is unreasonable or unnecessary; and
 - (b) there are sufficient environmental planning grounds to justify contravening the development standard
3. Is the consent authority satisfied that the proposed development will be in the public interest because it is consistent with the objectives of clause 4.4 and the objectives for development for in the C3 zone?
4. Has the concurrence of the Secretary of the Department of Planning and Environment been obtained?
5. Where the consent authority is the Court, has the Court considered the matters in clause 4.6(5) when exercising the power to grant development consent for the development that contravenes clause 4.4 of MLEP?

7.0. Request for Variation

7.1 Is compliance with clause 4.4 unreasonable or unnecessary?

- (a) This request relies upon the 1st way identified by Preston CJ in *Wehbe*.
- (b) The first way in *Wehbe* is to establish that the objectives of the standard are achieved.
- (c) Each objective of the FSR standard and reasoning why compliance is unreasonable or unnecessary is set out below:

(a) to ensure the bulk and scale of development is consistent with the existing and desired streetscape character,

The objective of Clause 4.4(1)(a) seeks to ensure buildings, by virtue of their height and scale are consistent with the desired future streetscape character of the locality.

The proposal provides for alterations and additions to an existing dwelling which are intended to provide for a development outcome that benefits the surrounding neighbours by maintaining existing view sharing opportunities.

The contemporary building form with a low profile roof and earthy external finishes are considered to suitably reduce the visual bulk of the dwelling.

Further, the modulation of the front façade, together with the retention of the existing side setbacks and recessive external finishes will ensure the development minimises the visual impact when viewed from the surrounding public and private areas.

The proposal will be consistent with and complement the existing detached style single dwelling housing within the locality and as such, will not be a visually dominant element in the area.

(b) to control building density and bulk in relation to a site area to ensure that development does not obscure important landscape and townscape features,

The proposal will not see the loss of any significant vegetation. The built footprint of the existing dwelling remains largely unchanged, and is therefore not considered to result in any adverse effects on the scenic qualities of the foreshore.

(c) to maintain an appropriate visual relationship between new development and the existing character and landscape of the area,

The site is considered to be sufficient to provide for the proposed works, with the dimensions of the lot to be unchanged.

The proposal will retain an appropriate area of soft landscaping, and the site will maintain an appropriate balance between the landscaping and the built form.

On the basis that the proposal maintains the majority of the existing landscaped area, the site is considered to maintain an appropriate balance between the site's landscaping and the built form.

(d) to minimise adverse environmental impacts on the use or enjoyment of adjoining land and the public domain,

The proposed works are wholly contained within the site and will not result in any adverse impacts for any adjoining land.

(e) to provide for the viability of business zones and encourage the development, expansion and diversity of business activities that will contribute to economic growth, the retention of local services and employment opportunities in local centres.

The site is not located within a business zone and by providing for the construction of alterations and additions to an existing dwelling, is not contrary to the viability of any local business activity.

7.2 Are there sufficient environmental planning grounds to justify contravening the development standard?

In Initial Action the Court found at [23]-[24] that:

23. *As to the second matter required by cl 4.6(3)(b), the grounds relied on by the applicant in the written request under cl 4.6 must be “environmental planning grounds” by their nature: see Four2Five Pty Ltd v Ashfield Council [2015] NSWLEC 90 at [26]. The adjectival phrase “environmental planning” is not defined, but would refer to grounds that relate to the subject matter, scope and purpose of the EPA Act, including the objects in s 1.3 of the EPA Act.*
24. *The environmental planning grounds relied on in the written request under cl 4.6 must be “sufficient”. There are two respects in which the written request needs to be “sufficient”. First, the environmental planning grounds advanced in the written request must be sufficient “to justify contravening the development standard”. The focus of cl 4.6(3)(b) is on the aspect or element of the development that contravenes the development standard, not on the development as a whole, and why that contravention is justified on environmental planning grounds. The environmental planning grounds advanced in the written request must justify the contravention of the development standard, not simply promote the benefits of carrying out the development as a whole: see Four2Five Pty Ltd v Ashfield Council [2015] NSWCA 248 at [15]. Second, the written request must demonstrate that there are sufficient environmental planning grounds to justify contravening the development standard so as to enable the consent authority to be satisfied under cl 4.6(4)(a)(i) that the written request has adequately addressed this matter: see Four2Five Pty Ltd v Ashfield Council [2015] NSWLEC 90 at [31]*

There are sufficient environmental planning grounds to justify contravening the development standard.

The low pitch roof form further introduces modulation and architectural relief to the building’s facade, which further distributes any sense of visual bulk.

The proposed development achieves the objects in Section 1.3 of the EPA Act, specifically:

- The proposed alterations and additions introduce modulation and architectural relief to the building’s facade, without seeing any substantial increase to the building’s bulk, which promotes good design and improves the amenity of the built environment (1.3(g)).
- The proposed addition will maintain the general bulk and scale of the existing surrounding dwellings and maintains architectural consistency with the prevailing development pattern which promotes the orderly & economic use of the land (cl 1.3(c)).

- Similarly, the proposed additional floor area will provide for improved amenity within a built form which is compatible with the streetscape of Barrabooka Street which also promotes the orderly and economic use of the land (cl 1.3(c)).
- The proposed new works which exceed the gross floor area control and FSR standard of 0.4:1 are considered to promote good design and enhance the residential amenity of the buildings' occupants and the immediate area, which is consistent with the Objective 1.3 (g) of the EPA Act.
- The alterations demonstrate good design and improves the amenity of the built environment by creating improved and functional living area and also maintains the amenity of the existing dwelling house and neighbours in terms of views by maintaining the existing overall ridge height, with a sympathetic roof form which will reduce the impact on the views and outlook for uphill properties and limit overshadowing impacts to the property to the south of the site (cl 1.3(g)).

The above environmental planning grounds are not general propositions. They are unique circumstances to the proposed development, particularly the provision of a building that provides sufficient floor area for future occupants and manages the bulk and scale and maintains views over and past the building from the public and private domain. These are not simply benefits of the development as a whole, but are benefits emanating from the breach of the floor space ratio control.

It is noted that in *Initial Action*, the Court clarified what items a Clause 4.6 does and does not need to satisfy. Importantly, there does not need to be a "better" planning outcome:

87. The second matter was in cl 4.6(3)(b). I find that the Commissioner applied the wrong test in considering this matter by requiring that the development, which contravened the height development standard, result in a "better environmental planning outcome for the site" relative to a development that complies with the height development standard (in [141] and [142] of the judgment). Clause 4.6 does not directly or indirectly establish this test. The requirement in cl 4.6(3)(b) is that there are sufficient environmental planning grounds to justify contravening the development standard, not that the development that contravenes the development standard have a better environmental planning outcome than a development that complies with the development standard.

As outlined above, it is considered that in many respects, the proposal will provide for a better planning outcome than a strictly compliant development. At the very least, there are sufficient environmental planning grounds to justify contravening the development standard.

7.3 Is the proposed development in the public interest because it is consistent with the objectives of clause 4.4 and the objectives of the C3 Environmental Management zone?

- (a) Section 4.2 of this written request suggests the 1st test in Wehbe is made good by the development.
- (b) Each of the objectives of the C3 Environmental Management zone and the reasons why the proposed development is consistent with each objective is set out below.

I have had regard for the principles established by Preston CJ in *Nessdee Pty Limited v Orange City Council* [2017] NSWLEC 158 where it was found at paragraph 18 that the first objective of the zone established the range of principal values to be considered in the zone.

Preston CJ found also that *"The second objective is declaratory: the limited range of development that is permitted without or with consent in the Land Use Table is taken to be development that does not have an adverse effect on the values, including the aesthetic values, of the area. That is to say, the limited range of development specified is not inherently incompatible with the objectives of the zone"*.

In response to *Nessdee*, I have provided the following review of the zone objectives:

It is considered that notwithstanding the compatible form of the proposed additions which see a minor increase in the gross floor area of 40m², the proposed alterations and additions to the existing dwelling will be consistent with the individual Objectives of the C3 Environmental Management Zone for the following reasons:

- ***To protect, manage and restore areas with special ecological, scientific, cultural or aesthetic values.***

Dwelling houses are a permissible form within the Land Use table and is considered to be specified development that is not inherently incompatible with the objectives of the zone.

The C3 Environmental Management Zone contemplates low density residential uses on the land. The housing needs of the community are appropriately provided for in this instance through the proposed alterations and additions to an existing dwelling which will provide for an appropriate level of amenity and in a form, and respect the predominant bulk and scale of the surrounding dwellings.

The development will see a modest increase in the total floor area of 409m², of which are significant majority (38m²) is located within the existing lower ground floor level and is provided through further excavation beneath the dwelling. The

proposal will not exceed the existing overall ridge height of the dwelling, and will see a reduction in the general bulk and scale in comparison to the previously approved development.

The non-compliance, which results from the extent of the existing floor areas and the provision of new additional floor area to meet the requirements of the owners will improve the amenity for the buildings' owners by providing new living spaces in a form which complements the architectural style and scale of the surrounding development.

The compatible form and scale of the alterations and additions will meet the housing needs of the community within a single dwelling house which is a permissible use in this environmentally sensitive zone.

- ***To provide for a limited range of development that does not have an adverse effect on those values.***

The alterations and additions to the existing dwelling are modest in bulk and scale and comprise complementary colours and finishes, and will not result in any adverse impacts of the ecological values of the locality.

- ***To protect tree canopies and provide for low impact residential uses that does not dominate the natural scenic qualities of the foreshore.***

The proposal will not require the removal of any significant vegetation. The landscaped character of the site is maintained.

The proposal is not considered to detract from the scenic qualities of the nearby foreshore.

- ***To ensure that development does not negatively impact on nearby foreshores, significant geological features and bushland, including loss of natural vegetation.***

The subject site is well separated from the foreshore, and will not impact the existing bushland along the foreshore. The modest extent of the new works and complementary external finishes will ensure that the development is not prominently viewed within the locality.

- ***To encourage revegetation and rehabilitation of the immediate foreshore, where appropriate, and minimise the impact of hard surfaces and associated pollutants in stormwater runoff on the ecological characteristics of the locality, including water quality.***

Noted. The site maintains property boundaries which are capable of accommodating future plantings.

The existing stormwater arrangements will be maintained.

- ***To ensure that the height and bulk of any proposed buildings or structures have regard to existing vegetation, topography and surrounding land uses.***

The proposed new works will not exceed the ridge height of the existing dwelling, and maintain consistency with the two and three storey scale of existing surrounding development.

The proposed development will follow the sloping topography of the site, and will not require the removal of any significant vegetation.

7.4 Has council obtained the concurrence of the Director-General?

The Council can assume the concurrence of the Director-General with regards to this clause 4.6 variation.

7.5 Has the Council considered the matters in clause 4.6(5) of MLEP?

- (a) The proposed non-compliance does not raise any matter of significance for State or regional environmental planning as it is peculiar to the design of the proposed additions to the dwelling house for the particular site and this design is not readily transferrable to any other site in the immediate locality, wider region of the State and the scale or nature of the proposed development does not trigger requirements for a higher level of assessment.
- (b) As the proposed development is in the public interest because it complies with the objectives of the development standard and the objectives of the zone there is no significant public benefit in maintaining the development standard.
- (c) there are no other matters required to be taken into account by the secretary before granting concurrence.

8.0 Conclusion

This development proposes a departure from the maximum floor space ratio control, with the proposed additions to the existing dwelling to provide a maximum floor space ratio of 0.669:1.

As discussed, it is noted that the Council's Manly Development Control Plan 2013 Amendment 14 and in particular Clause 4.1.3.1 provides exceptions to the FSR control where the lot is undersized and is less than minimum required lot size under Council's LEP Lot Size Map and the development satisfied the LEP Objectives and the DCP provisions.

In this instance the required minimum lot size in the locality is 750m² and when calculated against this required lot size, the development prescribes a FSR of 0.42:1, which presents a substantially lesser variation to the FSR control. Compliance with this control is constrained by the extent of the existing dwelling.

Accordingly, we are of the view that the proposal is consistent with the objectives of the development standard.

In summary, the proposal satisfies all of the requirements of clause 4.6 of MLEP 2013 and the exception to the development standard is reasonable and appropriate in the circumstances of the case.
