Subject: Objection to Development Application - DA2019/0683

To whom it may concern

I am writing to object to the DA on 31 Reddall street manly

Bandicoots , Bush turkeys , echidnas , Families of Komodo water dragons , ring tailed possums and many species of birds inhabit this property which and who have made this parcel of land their home .

This historical and significant environmental area was once home to the very people you will be denying remembrance to country - that of the "Manly" aborigines who used this land based cabbage tree reserve as a piece/ peace of utopia that fed families and protected aboriginal people and their culture , customs and general collaborative connection which was used as a meeting place for many other visiting tribes .

To think manly council wants to wipe this area out is disgraceful and if you need a comparison - take a look at Dee Why which has turned into a virtual Bondi Junction .

This particular land area has spiritual significance and has in no way a place for savage development which will block access to nature's chosen path and take away the beauty for all to enjoy .

This type of development may belong on the Gold Coast but it certainly does not belong here.

This is the last vestige of natural fall to the eastern seaboard which connects somehow magically to our beautiful ocean , natural parks and ocean reserves . The community of the eastern hill are proud of this rich area of history and nature.

If you must do this put it on the harbour side where everyone can see this monstrosity and see what the rest of Sydney thinks!!!

Our population in manly is small but our voices will gather momentum with others and it will be a stain on the council and may I say the church !! Not cool at all. As a Christian it is also not a very Christian act .

Think about guys . If you want community support , live and respect then do a community consultation to preserve and pay homage to the best interest of the environment .

Regards

Tracy Pinnow
